

GRIGORY GRABOVOY
The Teaching about God
Creation of Light
17.05.2005

Hello again
the topic of my seminar today
this is my Teaching about God
Creation of Light

In this topic I show how
create light

and if we consider
such management that God produces
then for example there is the phrase "Let there be Light!"
in this case we are talking about
what do we say about the future tense

i.e. "Yes" affirmative
then "will be" i.e. in the future _{yes} Light

or are we considering
as the current time, for example, "Let there be Light!"
i.e. from the current moment

and it turns out that in the system of light creation
the main thing is the personal system of choice _{yes}

or you shine in the current time
or you see yourself in the future tense
and the glow of your personality occurs in the future

therefore, you actually create the light
i.e. your Soul
your Spirit
Consciousness
you create light

and it turns out that as you look at it
that's the state of things, _{yes}
in the position of your personal Perception
for example , somewhere in the distant Infinite future
this is how the system of creating light is manifested
for you personally

i.e. in fact, it turns out that we are weaving light
from the structure as if darkness yes

i.e. we are considering the concept of "darkness", well, some kind of darkness
and the creation of light must be a system of action
inside a certain counterparty, i.e. some other environment

if we contrast
let's assume a "light-dark" structure
then everything is quite simple
or there is some kind of grey control system there
some kind of grayness or, for example, a decrease in light
then creation is the creation of a kind of alternative environment

and from the point of view of logic
God who created man
He did not create an alternative environment.
He created man in His own image and likeness.
where, in general, all systems of God's Action are manifested

and it turns out that in this system
this is a kind of mechanistic concept
that light must be some kind of darkness
doesn't really fit

i.e. light i.e. the next development
The light of God, for example, is man
well, in the big Macro understanding

and for a person any level of the World
this is also light
i.e. man and the Macrocosm as well

here it turns out that there is only light

in the specific nature of things
there is only light
i.e., for example, the concept of "darkness" does not exist

and it turns out that based on this
the concept of "creation of light"
This is generally speaking like a configuration
existing light

i.e. you work all the time
in the lighting control system
i.e. there is light everywhere

but apparently to every person

I've been in situations like this before
where for example he considers
some event as a structure of light
i.e. it highlights both the light close to it and

but it turns out that the distancing of other elements
just as the stars are distant from each other
this does not mean some kind of darkness
it is space and distance

for a person space and distance
it's not always just a dark night there for example
it can be just in a visualized space

and so it turns out that we are talking about that
that in the creation of light there is space too
by analogy simply

The world is arranged like this
we see there are stars
that means there is space there

what kind of space then the question arises
what are the functions of this space
how is it defined
how does it work

for example, we need to cure a person from a disease
what does this approach give us?
from the point of view of this space
which we discovered as if logically yes

so that's when we start
discovered space
develop theoretically practically
then we discover by the way already then a person
precisely manifested as a person Eternally living
first of all, by the way

i.e. here we get Eternal life
this is the first level of human action in the Infinite environment

i.e. the light of man is his space of action
form a space of light too

Well, it's such a complex concept.
The soul of man
intersecting at distant levels of Reality
with the physical world

creates this inner space

i.e. in fact, this is the internal space of a person
i.e. how he perceives himself within himself

i.e. Perception of a person in his Soul

and when a person is in this inner space
solves its problems
then he is there, for example, if there are any problems
he can be cured
if there are no problems he is healthy he can influence events

and it turns out this is inner light ^{yes}
here is the birth of this inner light
and gives space
in fact, all space grows in this world

if ^{for example we} can carry out such an action
i.e. to enter a state of special peace

^{for example} you see how a crystal grows
you can basically log in
into a state of some kind of calm observation
and watch ^{yes}
this is a calm state
you watch a salt crystal grow ^{there}
like in physics experiments in high school

but if you enter
into a resting space of the same type
^{as if} similar in many ways
and you start to observe
how does physical space grow in general

then you find
that the mechanisms are practically identical
exist in the action of this ^{as if} moment

at first there is some calming down
and then you see the growth of the space of light precisely

i.e. the space begins to grow
as the structure of light

and by the way it grows vertically
and you can even see here
where for example you need to plant plants

where space light grows stronger
that means that's where you need to plant plants
so it turns out better there, for example, it is considered
that people, animals, etc. live there.

in fact, such a space can be created

Well for example, they say there are geopathogenic zones
there are supposedly such unpleasant things
basically if you don't influence them they can be unpleasant

but if we know the growth structure of this space
then we can influence it

after all, the task is only in that
so that this space is actually the Soul of a person
manifested in the physical World
in the information world
be able to grow identically or adequately there
at the right point

Well, we see that space is curved.
right there, well, the surface
like there's some kind of mathematical Gauss
a well-known form like this well, it's like a saddle, yes

we need to have
Well, you don't need to have a cylinder like that, for example
Well, what can I add a little here?

this is the main thing to determine
what do we need then

and it turns out that here the person himself chooses again
i.e. according to logic, man is invulnerable

he can choose whatever he wants
and build the necessary space

but he can just live a normal, peaceful life
as if without producing any action it turns out

i.e. this is , well, in general, a fairly ancient principle
It is possible to actually be in the space of light like this
or to be in the light itself

here, by the way, there is a big difference
there is space as a consequential quantity
and there is light itself

and that's when we talk about the creation of light itself
it turns out that it is personal choice that is personal action
like some spark of light

this is what you mean by personal action
this is where you light that spark
somewhere in the heart area
in the area in the center of some cell
or for example by mental action

i.e. when you start to see
what is actually the case
there are not many designated points in the first level

i.e. a person has certain centers
which support well as if they kindle this light
in front of him yes
and he himself somewhere sets up his systems

i.e. in fact a person can
these are, well , actually, some such areas
markers some photons of light to decompose
and climb them gradually
to the level of one's own development

i.e. here it turns out as far as it can go
for example slowly or quickly yes

i.e. for example if he folds slowly
then it slowly rises
how to achieve the main thing - sustainability

but from the point of view of Macrosalvation, for example
Salvation of the whole world
he often needs to have only one pulse of light
and now he must save the world

and because the entire external system is built by analogy

the light coming from a person has an analogy
in the structure of the Infinite development of Eternal Salvation

and this, by the way, is the first axiom of constructing light
similar system

in the structure of Macrosalvation
there is a similar system

according to the principle of equality of all objects of information
for God

if you have equal structure in Macrosystem
then you can influence it

you equalize it as if in Spiritual action
i.e. spreading its light to Infinity

and the Infinite Light is basically one light
it's basically just a light source

and therefore if we locally allocate our own
Well as if we have there the sphere of Macrosalvation

we are outside this sphere
we highlight our area
and then we take the external light
by an effort of will we translate into Infinity
somewhere there in the glow point
and we get the source

and if we got the source
We can all build whatever we want, yes
we have a source, we know where to get it from

this means that we get the following axiom
obtaining a source
this is the transformation of the action of Macrosalvation

in Endless Wednesday

logically it is clear
because that's why we save
so that people live forever

so we should sort of direct to Infinity
why do we save at all
goal well as if it were already such a canonical ideal
in fact, it is real

the only real goal, as it were
this is so that there is Eternal development for all people

it turns out that it doesn't exist there
are no national characteristics there
there are no problems
between nations populations nationalities
there should be equal relations everywhere

here, by the way, it is very clearly visible
transition to a social management system

if you work well how can I say it correctly
at the level of light combinations yes
in management
it is through the structure of the creation of light

it's absolutely clear
that there is no difference between people at all
between nations there some peoples
in general between people in principle in Infinite development

i.e. God is One
He created all people in His Image and Likeness
all are equal anyway

which means the principle must be observed now
regardless of social circumstances, etc.

it turns out that when we are in the social structure
We declare this system
i.e. we see what is happening at the level of lighting systems
then social experience gives the opportunity to understand
how do the elements of light coexist

after all, a person is also a light in a certain sense
well let's say there is Infinite Light yes
manifested in the physical body

where there is the Soul as a completely unique structure
of one's own personality
this is not even classified in general
as the concept of "light" only by the way

"Soul" is a more general concept.
this is the light that produces systemicity
that's how one can put it

and it turns out that
it turns out that if we consider
this process is thus
then at a certain very distant level
The soul always interacts with God
at the level of its origin it is understandable
but there is also at the level of action

then it turns out
for example, there are no incurable diseases there

because from the point of view of light
you can always add light to build light
Well, it's like some kind of plasticine there

if you know this technology in the Spiritual
in Spiritual knowledge, as I am now giving
then you can build only knowing
i.e. without constructing the object itself
knowledge is a construction

and by the way that's why
light may not contain darkness
because the knowledge that you can
this is action
the action does not necessarily have to be controlled and carried out

For example, I know what's there everything is fine there
in some environment and management
I know
but I don't necessarily have to bring it to the light level

I or I only need one light level
characterizing this composition in management

and maybe this will be useful for many years to come

i.e. many actions are fixed in this way
that one positive action guarantees stability
well actually in the Infinite plane but
but at a tactical level you are in control
very detailed situation for many years

i.e. why is it controlled by you?
because it is static
you always see the same image when developing
what is this image
this is the image of a person

but you don't perceive him as a person
here, pay attention to the canonical image
this is an image of just the Norm of a person
and you perceive it in the area of, for example, knowledge

and when for example you have this knowledge
you start to translate it onto yourself yes
or for example on another person

then the canonical, as it were, informational image
Well what is the information level ?
areas of these knowledge processes

this is such a level
that it always normalizes the entire environment

here is the image of a person received in the form of knowledge
where, for example, the concept of "light" is absent, for example Yes
or or "absence of light"

there is often no concept of even "information" as such
this person just knows and that's it
how does a person know a lot yes
right there there is a habit of one's body

the knowledge that I just talked about is a different type of knowledge
this knowledge is at the same time
and universal
and absolutely personal

i.e. what creates light but already as a subsequent level

i.e. if we delve into this system of knowledge

then it turns out that we can get the effect yes
bringing knowledge closer
we can give health to a person there, for example

and because it is a kind of canonized system
there is projected the image that God gave
as a Similarity
that man is the likeness of God
i.e. this knowledge is understandable to us

and as soon as we start to go beyond it
we get the glow of light

i.e. the second system for obtaining light
this is primary knowledge
Well, let's call it that since there is knowledge about the root cause, yes

so what happens next
well we also had a source, it was from the Infinite Environment
but where is the root cause then?

God Himself is the first cause

and it turns out that we know about the root cause
well let's say without implementing there as if a permanent exit yes
on God
we can already make light

i.e. why can one turn to God

only at certain intervals
Well as if not constantly
but only when a person wants, for example Yes

and because God is still nearby, first of all
and secondly, at a certain level of the Soul
interaction still occurs

and here man creates light
he created it
God looked at him
and joint knowledge was obtained
i.e. here God already perceives at the level of man
i.e. He acts like a human being

that's why He can pass on knowledge unconditionally
Well there without saying we will say a lot yes

or, on the contrary, there is a long-term level of development of civilization
a colossal amount of knowledge ^{there}, technology of words, etc.

and ultimately in Infinity
Both levels are the same for God

the same for a person
any amount of action
comparable to the initial action

well, that is, the next level of light creation
this is interaction
i.e. equalization of any number of actions
at the level of achieving Infinite development
at the moment

in fact, the implementation of the present
there in full manifestation
for everyone
for myself

and it turns out that we have such a concept of the present
that everything real can be built
^{there} through the Infinite Light
through the structure of the root cause
it's logically clear

and through the interaction system
some neighboring areas of the world
or is Infinity the first cause ^{yes}
the first two global areas

when we start looking
how can we apply this principle
^{for example}, there in the social system
how to detect
that something is wrong with the social system
or it may be out of order

in general, in this case it is clear
Infinite development ^{there}, ^{well}, plus Infinity [,] ^{yes}
root cause starting point
or from minus Infinity
or there from the current time

and the line between them

like, well, like some kind of diagnostic environment
where it turns out that the projection of this environment
for example, actually diagnosing
to some kind of flat informative concept or something
how does this canvas come about?

why is it so common in civilization
it is precisely a banner and a flat value in a three-dimensional World
with some kind of projection symbol, some kind of such

and each projection symbol
means the action of two parties in fact

it turns out
that this is some kind of fixing diagnostic environment
capturing some moment
either the initial one or the next one

and it turns out when we find
well there in the flag and in some movement
the internal state of the Soul and body for example Yes
even the Perception of a distant galaxy
we are starting to control

i.e. we begin to live harmoniously at this moment
i.e. it turns out to be a banner
symbol of the acting harmony leading to the goal yes
as a manifestation of a flat level

i.e. the emergence of the first flat quantity
this is actually the action of different types of light

and from the point of view of physical processes , so to speak
it turns out that it really is
here it turns out that it should be so powerful

light
what is the effect of light for example
there it gives birth to some kind of plane , for example
i.e. material quantity

although it is expressed in the form of an idea, yes, this value
for example knowledge
but the banner cloth is a material quantity

those. translation into cloth
it turns out that this is a human action

and when we start to consider
and how does a person act?
in the collective Consciousness how it creates this matter

then here a very clear mechanism opens up
creation of light by man
even different colors

i.e. for example , why would a person need a certain skin color, let's say Yes
so why did he create or choose exactly this one there
for myself there For example

why in some region
that means some shades even of nature and so on.

and when we start to analyze
this is the internal state
there for example, mountains, some crevices of snow
or there is a forest or there are steppes, etc.

then we see that in the forest there in the mountains in the steppe
there is some common system
Well For example there is land there, yes

but if you think about it
then the human soul is as if deployed differently
in every region
Well, that's the concept as if from where man came
i.e. where he was born

and when we see this light
why does a person choose his birth
in some place for example
at the level of complete freedom of choice

i.e. all people choose somewhere
where they should be born

for example from God

and it turns out that here we see
interaction of light perception for example Yes
and the initial level of human generation

i.e. a person with vision is actually physical vision
if you think about this logic, it's like a chain of events

or a certain sequence of events
can regulate the outside world it turns out

i.e. he can either use his mind's eye
how to embrace the world
and influence the physical world
or physical vision
what he perceives with physical sight

and it turns out that at a certain level
mental vision there is physical
these are completely identical systems

from the point of view of the external system
this system may not perceive it
how a person perceives
physically or for example there Well there mentally intellectually
either he thinks or he perceives spiritually

and here is a powerful way of diagnostics by the way
and healing people
control of external system

as soon as the external system ceases to differentiate
any any complexity
human perception system
the person is basically healthy

i.e. a person enters the structure
where is the universal light well the structure of God yes
he has realized himself correctly at the moment
or there in the future

many by the way are healthy because they are in the future
they just realized themselves correctly
and they are moving towards this future
i.e. then nothing will knock them off course anyway

and it turns out that based on this
we see a powerful system

well where is there for example to build
there is a positive, rapidly developing society there
we just need people not to get sick
i.e. it's not like there is constant prevention and treatment
but so that they just don't get sick

were as healthy as possible
Always

then it turns out in this system of management in social
it is the structure of future processes
this is the main level yes
i.e. the light of the future

Now if we have considered to a large extent
as if the light of the current present time there

then it turns out that the light of the future
this structure already has a more global meaning
for some type of action

because in local
i.e. well let's assume so let's say in the current tense
anyway, we have the following picture of management here
that the current action is often the same anyway
well at least for logical perception
the determining level of management

i.e. for the logic of the process
you still need to navigate
in the current tense
Well For example there is a ship sailing there
it's clear that the horizon is cloudless, everything will be fine

but the ship is determined by its current state
by many parameters

so it turns out that here is the ability to connect
current
and there is a distant and distant future
this is basically the task
such strategic management
where the connecting level
is exact knowledge

how do you move from the present time to the future
i.e. such a rather subtle point
where you perceive the future as the current Reality

when do you start to perceive this system by the way
then it's clear, for example, it's definitely clear

that in any case you will be healthy there, for example

i.e. this is where it arises
absolutely precise some kind of clarity of actions
In general, this system is very useful as a diagnostic one
when treating other people there for example
when there is just healing there means
or even so that, for example, a person doesn't get tired

i.e. the ability to see this particular vibration
which basically means life itself

and it turns out that the light of life is yes
as some form of light
it is still a certain specific light

i.e. the ability to see the light, for example there is a life of its own
the lives of all people that there are no questions there
Well, which ones should be paid attention to

i.e. favorable level yes
This is an event creation system.
where you can exercise absolute clarity in managing
there let's assume our own events
there together with other events or for other events

because often the management of other events is such
what is needed as a kind of concentrator
use your own management structure
own events

because well, even managing somewhere in the region
so that it would be favorable there
need to see your own light near this region

and it turns out that you should
move the light to that point

as God does
He moves well from the point of view of a person
as if light simultaneously to any objects
as if a bunch of them immediately came to him

for a person if done synchronously
he must therefore advance first
one section to a certain region
there to align and see your own light

so a person sees the light by himself ^{yes}
third axiom

see the light
from oneself
from its action
but in fact this is an act of Salvation

if nothing is done
light not rendered background level

and if you do something, you help someone
you glow at this point
your element of Consciousness is glowing

then it turns out that i.e. self-organizing light
Well, basically, that's it
this is the action of your body actually
your personality in a wide spectrum

and here already further Macrolight arises
i.e. collective action of the individual
to regulate some systems
social
according to the normalization of the mandatory and normalization
Norma's light will still be Norma everywhere

i.e. there is tension, some kind of conflicts, even ^{yes}
there are other regional ones
but in any case it will be normal

this is the original Norm
it is embedded in the structure of light itself
organized by both man and God at the same time

it means there is light that is organized
and God and man at the same time

and here is this growing light
shows that there is no point there anyway
conflict, make something tense
everything will return to normal anyway

by and large there is not much point
It is better to immediately lay out the prospects of Infinite development
and immediately resolve it through negotiations there

through creative action, etc.

and the main criterion here is
ensuring precisely Eternal life
for all parties

when this criterion will be met
i.e. the light of Infinite life and Eternal life
all issues will be resolved sooner or later

let them be some slower, some faster
but they will still be resolved without destruction

and it turns out that this is what is important
criterion of action
well let's say light in the structure of Macrosalvation for example
this light is obtained from personal action

and here a third level of some kind arises
let's say exactly what the level looks like

i.e. it is not even an axiomatic level
and some internal sublevel of the body, so to speak

at a certain level the body glows
try to look inside yourself there
you see that there is a glow somewhere
not even inside the body
and some space that gives off a glow

and this glow actually illuminates the body
as if even from the inside
but if you look closely there is no vector

the light that comes from it even forms a body somewhere
i.e. some cells there are being healed, for example yes and so on.

and these cells may not be sick at all
they can be perfectly healthy
but they increase the resource

and when you start looking at these events
from the point of view of well there is no cellular picture
from the point of view of a man of all people
you see that there is still a collective light

organized in general by all objects of information
people
By the action of God the Creator-God
i.e. present in this particular place
and all the phenomena that seem to flow together
to the Creator

all objects of information

you can see it here
that the maximum concentration of this light
all objects are a movement towards God
and man is the development of His original thought

i.e. a person acts independently
at some level people flock to a person
the same objects
Well, he builds some artificial structures, etc.

and it is possible to differentiate very clearly
where are these technical man-made structures
and how other objects strive towards God

very clearly understand what structure will be collapsed
there is a pile installed incorrectly, there is a crack, etc.
which plane will fly there correctly
it's normal there won't be a disaster
and where can something happen with some device?

i.e. here it is very clear by the way
diagnostic system
artificially created objects
visible

and then how does it turn out
well, make sure there is no nuclear explosion there

please can you saturate then
light coming to God
and it is through it that we perceive
the structure of the same nuclear bomb
then it won't explode

i.e. this is quite a powerful technology by the way
because the creation of light
it is the structural action itself
in the center of the substance actually

at the initial level of the substance

and at the same time the nuclear reaction is incomparably weaker
compared to this mechanism of action

because you are talking about the initial level of the substance
there is no concept of a "nuclear core" there yet

and if we assume you start this mechanism
output as a control structure
you can by the way enter a very powerful area
where it is clear that it is absolutely clear
that there really aren't any diseases there, for example
if there is enough time
which for example there is no cure there

i.e. there are no situations that cannot be improved there
the main thing here is time

and here it turns out
what technology, well, sampling of events, so to speak
so that there is time

what is time for yes
i.e. there is a system of managing the past there
and there is, let's assume, a level of alignment

i.e. how to level the situation
if for example it needs to be leveled
it's good for everyone there

often means no need to use
structure of past events for example
but simply work on the development of future situations
and that's all

i.e. for this purpose, the structure of future events is simply taken
and the structure is built
as well as the space of growing light of the future

i.e. the light is growing
and the past no longer participates in this space

because I said two parameters "Let there be Light" in the future
and "Let there be Light" is meant now

I didn't say anything about the past in this case

and it turns out that if we
we consider management in this way
it is clear that a person is always healthy
because initially his fate was created
after all, it is more about its future level of development
By God

that means he starts to acquire this knowledge somewhere
Well as if not to pay attention to them

disperse them somewhere or something let's say so
and from here some problems arise, etc.

and as soon as we start
Well, actually, this knowledge is like finding it
so in principle there are some fairy tales there
there is "Lost Time" and so on and so forth, and lost events
exactly at this age, for example, in childhood

then here there is exactly such a structure
that the more dynamically the tissue structure develops
i.e. the organism
the more concentrated it really is
temporary structure

and here's to make the body independent
from the structure of time
and so that the future is determined all the time
stably steady

you need to be able to future events
as if well, "stick on" so to speak, in quotes
as of the current time

the mechanism is simple
the future is taken
sticks to the current platform
and is fixed

the only question is
so that the platforms do n't diverge, yes
you need to be able to stabilize
well, some kind of "artificial" is also in quotes
because it is your action

if you did it then it is no longer artificial
it's already without quotes

and when you start to sort of rewind
well, like some kind of sea knot, yes
future tense - current

then this structure "Yes" arises, for example Yes
is tightening
and then comes "there will be Light"
i.e. "Yes" is the Word that gives birth to Light

i.e. the third level of vision
well, as a matter of fact, Soulful by Soul
or we need Spiritual

you just have to say the word
and then the word itself is born

i.e. the word that gives birth to the following
The word "Yes" gives birth to what will be

and here you can see the conversion of the Word
i.e. the first Word fixing "Yes" yes
those. a sound is made
some word was spoken
It doesn't matter what language it means by the way

and then something will happen anyway
but there will definitely be Light

and therefore it turns out that based on this
once for sure there will be Light
that is the most convenient for a person in this technology
use the Light for your own self-creation

since he will always be
you just have to enter this area
self- for example to be recreated there
just as God does by analogy
well at least at the level of Infinite Life

by the way God has the level of Infinite life
this is not the only level of universality there

there is Infinite development
there is development for everyone, spiritual development for everyone, etc.

i.e. multi-level plan yes

and for a person it means the level of Infinite development
this is still one of the local levels of God

God has no level of Infinite development
the following levels already exist
which imply contact with a person
i.e. direct contact with a person

this means that when a person overcomes
and this level
he has the following
God has the next one

and it turns out that the more developed a person is
the more saturated it is, yes let's say so
the better it turns out for God

from a human point of view
God is doing his
Well as if even a human task then means

and it turns out that based on this we see
that at a certain level
as a spiritual level of personality
God and man can be one
in the light of the Action of Infinite Action
here is the unity of light action
unity of the task laid down in the light

the light that arose
Now he can't get lost anywhere anymore

that's the advantage of our world yes
the light that arose
now you can't hide it anywhere

and it turns out that based on this
our world is colossally stable
it actually cannot be destroyed, for example
because then well how the mechanism should be like this
that it would be necessary to go somewhere, as it were, is considered
hide this light but it is impossible to hide
there is no place where the light does not pass

then the following property of light

all-terrain capability ^{yes}
to create light you need to enter this function

and so I marked ^{it} there
some parameters ^{yes} basic
on the construction of light levels there

and it turns out that this is the one
^{Well}, that's quite an interesting moment
interesting property of light
all-permeability and all-manifestation
this is the Perception of a person, i.e. of himself

i.e. a person perceives himself
as a constant light level

here, pay attention to that level of glow
which comes from a person
this is the level of ^{a kind of} inner glow

but there is a level of self-perception which is also light
a person perceives himself one way or another

i.e. it turns out to shine somehow
into the structure of space in this way
that he also creates with light

because Perception is also light

and in fact of physical matter
he must perceive himself
this is the advantage of physical matter
the cycle of Eternity of development is embedded there

It is enough to see himself, he already perceives
and so ^{how to} get out of this actually ^{well as if} there is a cycle ^{or something}, the cause-
and-effect relationship can no longer be logical

i.e. if a person perceived himself
he already lives forever it turns out ^{well} in perfect logic

and in order to prolong this effect ^{yes}
^{for example}, that's why I say
that three years before, ^{for example}, even conception
you can give knowledge

well from minus infinity
up to minus three years
then from minus three
up to there minus one, etc.

and because of that concept
as if non-existence from the moment of conception
it doesn't exist anymore it turns out
for Macrosystem

if you look at the information from the outside
as God does it yes
for a person it can be seen as if
but for God there is no concept that "man does not exist"

i.e. for Him it is kind of completely unnatural
He who always exists
so that this point of view
He should then sort of move on
on the structure well or some kind of local development system
but he still won't do it

i.e. for God it is unnatural
if you look at it from this point of view
by the way, a very powerful channel
some kind of powerful control for treating diseases
a lot of people
there in the halls for example
well, when Thinking there over regions, etc. over the World

because this point of view it shows
that there is a super-powerful super-fast light
which instantly gets distributed throughout the region
there it gets into all the apartments there, etc.

and by the way you can see how he warms everyone there
after all, that's what God does
He sends a certain light to everyone.

and based on this
when we are already building, we create light, it turns out yes
why do we need it to create

to apply there for Salvation to pass on to someone there

in principle, a person often thinks little about himself
he often needs little
maybe doing it once for himself is enough for him for decades then
or in general Infinitely many tens appear

and if we are talking about some problem, for example
which needs to be solved
then it turns out well who knows, someone needs to heal someone, right
need to make management by mass events often in the World

and you can't say that someone is busier
someone is less busy
People are always, as a rule, equally busy
from this point of view
everyone has their own, basically the same
from God's point of view problems

i.e. at this level by the way, by and large
you can't even say that some have more and some have less

and this level there is like equality
i.e. any question means unambiguously
either the question is complex or simple
he is always the same for God
from the point of view of God's reaction to this question

because every action
defined as next level action
and the next level is overcoming the whole picture of the World
this is the management of the entire system of the World

and that's why we need to understand here
that by the way many people have problems
from the fact that they may often underestimate
there is no importance of some steps
Well in general, not very identified well as if background

and make a division
between means some very intense actions
and let's assume the usual actions

if there is such a division
at the level of distancing from events do not do
then the control is much more stable

i.e. an element of distancing from events arises
getting closer to yourself
next level light control

getting closer to yourself
and the more you get out of the event
Well as if you abstract yourself, move away
especially since it is controlled

it turns into integrated light
there is no need to bring it out to something peripherally there
or move it somehow

the more you distance yourself from him
the more concentrated it becomes
how it shrinks to a point
which you can already calmly
bring to the level of the Creator there

consider God's reaction
and see how the Light of God is already sticking to her
and then make a similar light

here is the element of light creation
this is also the management of the technical side
of this case

i.e. the ability to deduce
similar to what God does

and see how God does it
in this system, by the way, it's not that difficult
it's all transparent

distancing
well, actually speaking as getting closer to oneself Yes
to their resources by and large

and then you see these light levels
which seem to mix and begin to develop

and then by the way you can see where help is provided
help should be in the family Well as if where we consider it necessary yes
and in principle there should be help
in general, where it might be most appropriate
your Soul thinks

and in general it should always be there

i.e. an integrated concept
where by the way even the structure of the word is
it starts to stick together
i.e. it is clear that there is help
but often it is not called by a word
the level of word clumping begins
i.e. current future

and here the past emerges
to fix a specific word
past events emerge

i.e. if we consider, for example,
why in this control structure ^{yes}
from this point of view the creation of light
God created the past

and so that the words don't stick together
if we go from the point of view of the current and future word
they just don't reach the level of the beginning
they start to stick together, half of the words remain there

and as soon as we fix the past
we get the whole word
i.e. the past as a projective fixing structure
^{as if} the material has been developed

so often you can really work
only future current
and the past as a structure of fixation is often not used

and here is the system of the future
or you can always fix it for the better
for everyone, the past

but here is a fixed future , for example
this is already the ability to highlight
the same word ^{as if} in dynamics

i.e. the next property of light already constructed, for example
This is a dynamic selection skill
there is a fragment of some sentence
i.e. words

for example, ask a question
how is the sentence generally constructed
i.e. the person wants to give a speech
he needs a specific proposal

Well, where can I find them in the information, for example? Yes
and there needs to be Salvation
it's not just some ordinary speech
namely, information control and management

here you can find a proposal
where the speed is reduced

the word goes faster
letter with even more
and the supply is already at a slower speed
and you can see it right as the bunch grows

here is the sentence structure located here
whole yes there are phrases

and what does it represent, for example?
By the way, here is the treatment of a person
if there is treatment with digital rows

you can see that the row itself is divided into different speeds
one digit one speed
part of a number
this is an integral such differentiated often speed
with some kind of chaotic action
and connections with the external environment

It's only worth it to the full figure
go to
there is already a fixed system there

and it turns out by the difference in speeds
due to the action of these numbers as such, including
stabilization of the process occurs

Well as if fine-tuning some individual systems

i.e. the number is there, complete antagonism to the diagnosis
bad for example
there is a downplaying of events for the better, etc.
i.e. the diagnosis, for example, becomes less of a problem, yes

i.e. the ability to immediately obtain a problem-free system
there through the digital row
all this is embedded in the system, for example, control through numbers

you can work the same way
in the structure of words simply pronouncing the goal

i.e. a lighting structure is installed
which helps a person
Well, some systems need to be overcome
at the expense of well for example, there are knowledge systems in the collective
Consciousness
on management technologies

but in general, a person is essentially all the same
It would be desirable for him to understand
how does this digital series work
how does external control system work

i.e. he must be self-aware
any action if possible
and in the long term it should
in general, always be aware of any action
cause and effect

so he should even know where there is no reason
there is just light
it must control the movement of light it turns out

and in some cases where there is no light
and a person needs to build a reality as if augmented
he must be able to create it

hence the light control mechanism
this is how it is built
what is needed in some cases is obtained
somewhere for example create
somewhere just to add
and somewhere to supplement and create

it turns out that there is already a third level here
skill means to augmented light
add a section of created light

By the way, these are different actions

or you can create it according to the principles
there are axioms that I have outlined now
or you can, for example, just add something there
as if using the resource environment
developing light

light evolves
you can just record the event somewhere
light grows in different directions
there will be more growth in events
in some direction and that 's all

but this is not the creation of light

but when I talk about creation
we are talking about the original creation
then if we build something up and create something
then these two areas
begin to interact with each other

one is kind of built on the previous base , yes
another one, as if newly created by you

but by and large God Himself creates everything
then you should see where the light that appeared
where it was previously created
and where did you participate by the way
how does this even concern you

and when do you start
this area is like Well, let's implement it
that you are entering the structure of the primary action
any light
any investigative light
Well any light you encounter

then you begin to penetrate into the structure of Consciousness
and there are
other people's opinions
actions of people
there are other objects, there are even stories, there is even information, etc.

and it turns out that what is important here again
choose a simple human position
i.e. to be able to help in every situation

it doesn't matter when the events happened there
how they will happen
you should always help a person

and this is like Macro-help and Macro-management
this is what it is
why is god outside of time and space
because He does the same thing everywhere, yes

He creates and saves and implements

and it turns out that because of that
what if we look at it
this is the system of interaction of light
between the elements of God's Action it turns out

because for example someone
Well, it doesn't fully consider it
or someone here has no time
these sort of constrictions are happening

the light begins to distort
and some negative thing is being realized
there may be events there
although it would be possible to simply control and improve
and that's all

but in any case any event
it is possible to change it for the better for all parties
this is absolutely clearly visible in this system

and that's when you start working
with light as if in all configurations
i.e. development
Creation

Well, to a greater extent, you can use creation
what is simpler, more often and more accurately

then it turns out that it is visible
that there really is no such thing as an irresistible event

You can always add to improve
Well, it's like some kind of constructor
you can always create what you need
and precisely from the point of view of Macro-creation
with absolute benefit for everyone

This is where I end today's seminar.

Thank you very much for your attention
