

GRIGORY GRABOVOY
The Teaching about God
Management of Eternity
24.03.2005

The topic of my seminar today
this is my Teaching about God
Management of Eternity

In this topic I show how
use the very structure of Eternity to control
i.e. how to control through it

and also, generally speaking, manage the structure itself
i.e. as a concept
as a substance
as matter

and in this regard it is necessary in this topic
when do you work
for example, at the same time right now with me
consider your specific tasks

because as such, well, some kind of theoretical management
it always has an applied character
i.e. you need to first of all identify your own tasks
against the backdrop of Eternity and try to solve them
right there at the moment of control

i.e. today's seminar
it will be like a permanent management
their own tasks

Well, first of all, recovery
then some management tasks
connected with your target affairs

therefore it is desirable
so that the task itself as such of management
was clearly defined

and try to get your control out
i.e. a certain goal for example any
It's better to have one first and then the others
in the form of just optical glow

i.e. take and see what your goal is
it is, well, a small element of light, for example Yes
in the information space

when you do such an action
then in principle this goal is no longer called
but the actual work is just happening
with this level of management

and Eternity that touches your goal
this is already management
at the level of, as it were, mechanical optical systems
well, that is, some forms of information
which interact
and you get the result

at the same time the result itself
it is embedded in the primary goal
i.e. you are laying it down specifically
you should get something specific for example
For example get healthier there
or to get some desired event

a creative event which through Macrosalvation
through Macro Management
leads to your private goal

and here we must keep in mind
what exactly is the characteristic of Eternity
it is still the completion of an event

because the information of Eternity
it's always a realization
if there is an Eternal amount of time there
Naturally, sooner or later a person will take control

and therefore it is necessary to keep in mind here
that this is the property of this matter
it is very unique in general
and control of this system as matter, let's say Yes
as information
This is generally speaking a special technology
related to the fact that first it is necessary to determine the approaches
to this information
and then start working with the information

although in principle it is actually not difficult
as well as working with any other information
you just need to understand the concept of "information"
lay the structure of Eternity

and generally even often determine
there are some boundary conditions of the region, etc.

but as a rule it is Eternity itself
this is actually a rather unusual value
or something for Perception

as a rule, it is a system that is perceived
how often Infinite quantity

and now imagine that you
for example, considering this system
you are moving towards the border of the system yes
Here, for example, is the optical system of Eternity
revealed in Perception

and when you move towards the border of the system
then it turns out that what happens next
even greater development by Infinity

the closer you are to the glow
which well for example you call it Eternity
or do you really reveal it in the information space?
the more you have
the next level of management seems to emerge
management begins to develop

Well for example, you perceive the starry sky
if you imagine that you, for example, mentally move
towards a certain star
then it turns out that the next space
it's becoming more and more, as it were, little-studied
in the first impulse of Perception

i.e. the next space becomes as if bigger yes
the more you move
the greater the scale of external Reality

and so does God
when He makes management as if from Himself yes For example
there is the Physical Body of God

God makes management for example
for the health of all people
at the same time all external information
she grows for Him

Well, here is the mechanism that I just explained
it is exactly like that, that a large array when working with it
as if it creates an even larger array

and generally speaking, here is a certain key
to solve a problem, for example, in the case of treating a disease

i.e. having achieved some minimal improvement , for example , yes
the most minimal
naturally there are even more opportunities ahead
achieve improvement

i.e. the array increases and the possibilities increase
i.e. you get your first property of Eternity
this is an increase in positive management characteristics

and when you, for example , reveal this property
then you actually get this status

Well as if for myself
management
what therefore is the next level yes
it should contain even more
this is like a discrete level

right here in Eternity itself
there is a certain, well, some subtlety

if you move the control continuously
how to keep control all the time
at the level of the Spirit for example
and it's like Well, don't miss it, but remember it all the time
then how could such a process really exist?
the further, the more it grows
the positive wave you need

but if you jump over
as if discretely into the neighboring region of Eternity
then everything is practically from the beginning
so there again it turns out to be a new Eternity , yes
that is, a new form of information

and therefore it is necessary to maintain control here constantly
and from here arises

that's why I said it right away at the beginning of the seminar
you need to maintain control periodically, at least remembering
about my own tasks

because it's one thing
we need to manage

Well how to concentrate on that

if the driver is driving and he looks at what is outside the window
he can observe the external environment

but he has to concentrate periodically
on management as such

and it turns out that here we have approximately the same principle
the principle is quite close, by the way, here it is
to the movement ^{there} or to the driver's behavior

you are trying to maintain control
like sometimes even if in this mode
well, somewhat automated
remember the tasks anyway

the more often you remember tasks
the faster they are implemented

at the same time, you need to make it natural
i.e. not just remembering there constantly
because the thought begins
well, you can even see the movement of thoughts clockwise
and the thought begins to work ^{with} excessive speed
and here we still need to vary
speed of movement of Thinking

i.e. the following such axiom
that in working with Eternity one must be able to vary
speed of thinking consciously

so first of all you have to see Thinking
my own on optics
and secondly, to be able to ^{means} to do so
so that for ^{example} the glow of thought ^{yes}
some kind of ^{well}, some kind of circle or spiral
closer to just a flat control phase

touching precisely the goal of management
they ^{seem} to be spinning idle

we can't allow any such idle scrolling, ^{yes}
that's exactly it, i.e. exactly so that the clutch exists

and here we see the following property of Eternity
any segment is rigidly connected to each neighboring one

and when do you start
it is precisely at this kind of cause-and-effect level
develop
then it becomes clear
why does it exist in life
there let's assume there is some cause and effect
some time intervals of control

because if you ask ^{yourself} a question
that's why this is the form of Reality, ^{yes}
exists in the world
after all, God could have created, ^{for example} there are timeless forms
how some organisms live
in its own system of measurement
and then you get a completely different Reality

here is the cause and effect system
from the fact that the Eternal Man
must exist and live
generally develop happily
precisely in a rigid cause-and-effect system

if when you start to analyze
what is the reason
what consequence will it lead to
then here, by the way, is this ^{certain} sheet
or there is a projection level of Eternity
This is actually a very useful thing
in management
it's like some kind of event map appears

and you start to see what's happening
in case you change the traffic structure

i.e. you can consciously
look at yourself at this moment
and see almost all connections
that match your goal

for example, right now we need to do this
to Macrosalvation i.e. Salvation of all

from for example there is a possible global catastrophe
for example, everyone learned at once, yes, that's the goal

then it turns out that this is specifically the management level
and generally speaking, immediately with such a statement
it's immediately obvious that people have this resource

if we talk
that first one will learn
then there is the third tenth, etc.
then that's basically what we'll do
this is how we will set up the management
that's how we'll implement it

and therefore in the structure of Eternity
There are naturally a large number of solutions
and it all depends on our point of view now

but as soon as we introduce this point of view
then we get really real control
exactly what we want

here is where there is a fundamental difference
in management through the structure of Eternity
through the matter, as it were, the realm of Eternity
and management well for example any other system

because as I showed here
in general, it's logically clear
that as soon as we start
for example, really do management
we get an infinite number of solutions instantly

actually need it in this environment
this is, in general, a certain environment with certain properties
according to control logic

and we also need this certain control rope
hold
i.e. from the Infinite choice of solutions
always stick to your principle
here or what we see

So we get it
must be constantly monitored
course of events

well, just like God does

He controls almost everything.

For example there by an effort of will, including
and at the same time does not lose the thread of the cause-and-effect levels
there

because He creates it Himself
for God it seems to be easier here, yes
He both creates and leads at the same time.

but if we consider
what should a person do in this case then
then it turns out that he should
Well, first of all, to be practically healthy
preferably as simple as possible
or absolutely healthy

i.e. to hold control after the fact of initial creation
and then already
or get healthier there if necessary
if he is healthy then accordingly constantly decide events
from the point of view of Macro-rescue Macro-management

as the lighthouse means the structures of Eternal development so to speak Yes
here is Macrosalvation

a person can through the structure of Macroorganization
solve your problems
so it can develop forever

and it turns out that he naturally decides one way or another
usually good at least accurate
solves the problems of Eternal development

and here we come
to such a generally central point of today's seminar
that there is , for example, Eternal Development as I said at the beginning
try to solve your problems using all concepts
on all
on any correct optics let's say Yes
or on thought forms

and there is Eternal development
and there is for example there is information of Eternity yes
that's the fundamental difference

it is logically clear that Eternal development
well, some systems of actions

but if we take
well the structure of the Eternal development of man
and to some Infinite form of Consciousness
let's move
and from afar we'll look at it
we will still get the structure of Eternity

and here will be the main difference
there is some abstract Eternity ^{yes}
which as I said has ^{some} properties
and these are some of the properties that are basically defined
to some extent now

but if we look at our own design
then we will get exactly the physical body of a person
united in terms of
Spirit of the body
Body consciousness
Souls of the body

i.e. we get unity
bodies
Souls
Spirit
Consciousness
and even actions

and that's when we get this structure
then this characteristic, generally speaking, is often
or completely different
but sometimes it is very similar
on the structure of some abstract Eternity

and if we look at abstract Eternity
then we see that we ourselves put the concept there
i.e. we perceive this as some kind of "abstract Eternity"
this is our concept, ^{as if} our conceptual apparatus

and that means this concept is still contained
inside ^{the so-called} Real system
exactly the one that practically ^{doesn't} concern you

for example, you have any tasks, and
you can live forever
if these tasks are ^{somehow} connected
with information of real Eternity

Well, a person is walking along a road or a bridge, for example.

how do you know if it will really hold the bridge yes
i.e. it won't bend
i.e. the person will cross the bridge
or is this bridge unreliable, for example?
this is exactly the level of Reality

where is Eternity real
i.e. when you walk along the structure of real Eternity
where you just kind of want to go let's say so yeah

it turns out that choice is important here
it is precisely at the level of thought form after all

and when one thought is tightly connected to another
at the level of conceptual systems, as it were

i.e. thought and thought
a whole concept is born
or is there a whole world there

i.e. the birth of a certain structure
from your mind
or there is physical action
any in principle
i.e. well as if the principle of Macro-creation

then you are going the right way
in the structure of Eternity

if there is no creation of a new substance
then it turns out it could just be Thinking
and not, for example, management there in the structure of Eternity

at the same time you can Eternally develop and Eternally live
but there will be less control here
sometimes significantly

that's why here in the structure of Eternity
and the management of Eternity
we need to move on already
precisely to the management of Eternity as such

Well, it may be a somewhat unusual concept
that there is Eternity there
and we decided to manage for example
why do we even need this

Well, there is Eternity for example , and so be it
study enough it would seem there are Laws
and develop
in the structure of this certain information environment

but we are managers
we still have to be able to do it somehow
output any information object
in the control phase
purely, so to speak, an ideological task

once you control it means it doesn't matter
any system in terms of Macro-creation
naturally without any kind of pressure, coercion, etc.

and in connection with this, when we set the task like this
it turns out she is very specific

without control of Eternity
that's exactly it, without such a management structure
we still don't really solve the exact problems

i.e. it's not just a logical factor , yes
so we decided there and we do it
no problem is solved just like that

we can only solve problems
which correspond to Macrosalvation

and here we clearly see
what if we just went and came up with something for ourselves
there is a series of some management tasks, yes any

this is what makes it different
normal control
from the target by Macrosalvation

that the invented system
Well as if it was artificially invented
it still gets fixed instantly
in the form of a clear answer
and that's all
i.e. there is no development of the system there

and therefore if we go for example
on the way there exactly yes

according to the human body
development
we get in each subsequent case
next level of management

then it turns out we are going quite correctly
quite correct
and in general there are no problems

because our seemingly logically chosen system
it is justified by the fact that we are doing the right thing

i.e. if we, as it were, it turns out we count
that maybe something should have been done wrong here
then we just get one answer
well, some there for example a constant yes
and that's all

and it turns out that the action
it's always a clear choice
and a clear solution

and this is like a projection of dynamics
on the human body
shows how the human body seems to penetrate into Eternity

those. projection of Eternity onto the body
this is the structure of penetration
in general, bodies into the structure of Eternity

i.e. well, some kind of environment of Eternity is put on the body
and interacts like, for example, a spacesuit
if you put it on an astronaut or something

Well, there is robotics, yes.
repeating human movements

and here the external structure clearly repeats
structure of human movement

and it turns out that if a person is doing business there
and wants to implement something
then for a person it is a physical action
and there is an infinite amount of interaction
in this environment

because it only takes repetition
some kind of one control element

there is a primary
the series starts instantly
Infinite number of reflections
and the action turns into a distant environment
or into some hypermassive environment

means any human action
leads precisely to a very large volume of information

Well, that's what God does too
He leads to any action
to an even greater increase
in comparison with how God Himself does it
i.e. to Infinite increase
where every element is controlled by God Himself

the same thing if you do and try to control
every impulse of development
then for a person this means that it is necessary to record clearly
where does the control impulse pass
and try to catch this impulse
and do something with it next

but there are so many impulses in this case
what to try to catch in this environment
how each specific impulse
is spreading
it's complicated
you can try to do this several times
and the management in principle will take place then

here is also the nodal root of control
enough at the investigative level in this Eternity
catch at least one pulse of expansion ^{yes}
we instantly gain control
in the implementation of its task

because the light that means the solution
it means he becomes Infinite
and naturally you get a solution

and when you ^{for example} have this solution
in the form of a goal that has already been achieved ^{, as it were}
you can see ^{there} the beginning of the goal setting itself
how did you install it, etc.

but it's easier to just leave right away
to the primary structure to the target

and do not look for light there in a large amount of reflection
and enter the structure before the goal is formed
where the light impulse is

Well for example, it seems to be absent, yes
precisely in large volumes

a very technologically simple task
you leave the area before the target is formed
and then the impulse is reflected into Eternity
he is alone

because you actually

Well there you do not allow development by an effort of will
well, sort of Well in general, the solution is yes Means

and when you see
that the reflected impulse into the structure of Eternity
it starts to shine as if from inside
there on your target

then it turns out that it is this impulse
as if it seemed like a pre-target impulse
he solves your problems
in a purely mechanical way
at one point

enough to concentrate
in this case at one point
at some one and the same point

and so we came to the fact that in Eternity
there are still points
which are static and which solve our problems

i.e. we don't have to
so that's what I'm saying there, trying to cover some
Infinite number of movements
but it's enough to go to this one point
enter control

and then we get some kind of fixed task

for example, the ecology in the city needs to be normal
then we don't have to look for pollution all over the city
and to identify the nodal point of such Macroillumination
standardization
and hold for a few seconds
here is the concentration of attention

and the air is cleaned for example

or for health reasons, don't track microprocesses there either
but rather just a phase of future health

view

and fix the control at one point

and to begin developing events towards this future

i.e. how to make sure that events develop positively yes
or in the way we need

so we have to control
movement of events
in principle at every stage

i.e. in fact we must create
a certain level
some algorithm to lay down

and if for example this is done
due to large dynamic systems
there is information analysis there, etc.
then we are just wasting time

we need to find a path that is often completely unambiguous
For example there must be some kind of nuclear power plant there
it didn't explode or there was no nuclear war there
with the use there, well, through some political systems
these means of nuclear destruction
This means we need to act often and instantly

or even
even if we work now yes
and what we do is we restructure this information
in the future

after all, these processes are very fast-acting, yes
and we need to be able to stop it mechanically
there is the movement of this bomb of some rocket

and we still have to manage to do something
if such a picture arises
restructure now

i.e. to make sure that this does not happen
but at the level of those speeds

although it would seem that it is very far ahead
and what's more, we've now worked through it and it's gone

but we still have to think comparatively

therefore it turns out
that the system is this fast
speed increase system
it is very well demonstrated
and it seems to be implemented very well
it is in the structure of information of Eternity

and that's when we are engaged in the management of Eternity
then we can take the array of Eternity
as if from some other side
move towards the control system
bring closer
and get a boost and speed

when we manage through the structure of Eternity
in principle this is also management
but after all, the management of Eternity
this means changing the properties frequently
we can change the properties of Eternity

and when we change the properties of Eternity
into the form we need, for example
then it turns out that this is what didn't happen
some action
we can do a very simple thing

well, so that a nuclear bomb doesn't fall there
on some piece of land
we can make a small area eternal
i.e. so that it would not be subject to nuclear destruction
there is vegetation there or there are people there and that's it

and how would we fix this system?
and there is no possibility for the event to happen

those. we do not influence the bomb itself there, for example
and this could be an indirect influence
on the political system
for some social
or just one person's opinion
which is near this nuclear button

it turns out that when we act
It would be desirable to track this

what exactly or who exactly do we influence

per person really

it was set that way by God

it is generally impossible to influence

Only a person must make a decision himself

it turns out that he should have time to make a decision

there is no way to press the button

this is a whole history of education

i.e. his Perceptions are there in one impulse

so again access through the structure of Eternity

how to get knowledge instantly

about a huge number of events there

and also decide not to press that button there

then you need to get comparative knowledge

get knowledge instantly there

and besides that the Soul of man

must make a decision there, etc.

i.e. it turns out that we are not imposing

should still do the management

natural for any person

it is creation Eternal life

it turns out that this is when there is time

we can form

but when for example there is not much time

there is no time

we must act this way anyway

that a person makes a decision

and for example there is no nuclear war going on there

or there is a chemical or any other system

which can be destructive

then it turns out that if we start

do management like this

let's assume some kind of possible bacteriological attack

then we can influence one certain bacterium yes

that it is not being implemented

i.e. it does not work in the structure of Eternity

and that's all

and the whole system stops

i.e. this search for systems of, so to speak, single points
it's a very pragmatic, useful tool
in order to counteract
there are some macro-destructive processes there

and from this point of view if we consider
Well as if an element of destruction of the organism yes
taking into account time
then it turns out that this is also a kind of system
there is such an external one that affects the body
for example, a person gets old

and if we find in this system
a similar analogous point
and restructure
actually possible so to speak action
or development of the system
which is directed negatively at a person
then we can accordingly create youth, health, etc.

for this we only need
in the history of events
generally speaking in all events
that concern a person or even do not concern
find control

here by the way the most important level is
often found in management
there may be some associative point
which may not directly concern a person

because these are some kind of levers of light
which exist eternally
they are very peculiar in such a way
often seem to be realized

well imagine there are a lot of, say, billiard balls
and they all hit each other
Here's how to understand it logically, for example
that some kind of ball will be in this place
which means action
in relation to this person

often here it is simply necessary
like knowing this system of re-reflections in advance
i.e. we should be able to actually predict
what for myself personally

where to focus attention

and this is already a certain specific technology
which is based on that
what is information anyway
it has some weight in Perception
and we can move to this point of view

and if the processes are very fast for example
and the concentration that we need is higher
it will just sort of drag on
well, even according to some Law
some kind of let's say optical, let's say gravity
you can call it that

a semblance of gravity arises
and these photons are the most active
which denote your action
they begin to appear as if they had a higher density

this this density it begins to filter
as if down
i.e. it can be seen directly as a suspension
here is the information, these are clear stable points
those that mean a certain suspension

and that's when a person sees it
he can do any action
i.e. he becomes completely free

what he wants at this moment
that's what he does
that's when he starts to see it
here he sees his own complete freedom
and moreover his personal freedom of action
always aimed at Macro-creation
i.e. it is absolutely constructive for everyone
is in effect at this moment

well if he is there for example he behaves calmly there
then it turns out that it has an output level
into the structure where all these processes of Eternity are
in fact, as if fixed

because what I'm saying
This includes the methodology of selection

control systems of Eternity itself
and if we talk about management through Eternity
then you can also control through these points

i.e. the point that controls
and Eternity itself

and through which events are managed
but this is, as it were, a concentrated manifestation of Eternity , yes
even if it's just some element

when we start to look closely
to this information
what is she like
we have to take it there and open it up and have a look

Well , we found it there in the information systems
and now we have to find out
what is she like
just take and sort of zoom in on the image yes
unpack

and here, first of all, the actions are visible
in fact all people
and such private actions of certain groups of people there
who act there, of course, constructively
They are building something there, doing some things

and here it is clear that the influence of personality
here's an example yes, a specific person
it's just like god does
there are a lot of people working, they are doing something
and God is kind of present yes
or is he actually present by the way
It's just that He's not always there specifically
in the form of a human physical body
like doing something there, for example , in the form of a lecture, etc.

it turns out that this is exactly what is present here
and we see the same factor of human presence
in relation to other people

i.e. just like God does
a person can unobtrusively, well, actually speaking
even here is not a term there for example, "regulate" can
and how to provide assistance and how to guide
from the point of view of their own desires

here's how to do it
so that the ship sails in the right direction yes
besides the fact that he has a route
there for example, many people decided
independently means to manage means
Well for example this ship
but they don't have a route
that's where he'll float then
this is the task, let's say

but the thing is that it is there if nothing is done
he can go with the flow for example Yes

and that's when people have equal points of view
then it turns out to be the flow itself
this is what God shows to people
where should the ship sail?

this is the ability to find in a natural, as it were, expression of will
what God shows to people and to everyone
but the action is performed alone

and that's when all the events in the World happen
well, by analogy with a ship
there seems to be one projection
where there it exists one projection

each person does his own thing
but somewhere there is one projection

then it turns out that this is precisely the projection
in fact, this is a technologically derived
the structure of the Eternal life of man

i.e. his desire is to live Eternally
as a management goal that is set by all people
in their action

i.e. if you just take it and look
that a person has done some action
and determine the original goal
why did he do this action in this place

then you can identify this characteristic
this vector is defined
which suits any person

and that's when a person begins to reveal this

in the structure of your own tasks
then it turns out he does the same thing
finds this point
as if projected from Eternity
Moreover, it is also a vector one
i.e. well, a certain vector which is even like a certain compass
shows us another route

for example, you can have such a mental
let's say compass or vector
and probe this thread of Eternity

and then you can even go specifically
just in that direction
where it just happens
everything that corresponds to this for a person

i.e. with such actions he gets healthier there
he decides events, etc.

i.e. in principle this does not mean that you need to deviate
there from some routes
or some special installations like that
to do something for oneself or to implement something

you can go where you go
just at least take a look
how does this level interact with yours

and when you already move to this level
then you see that generally speaking human thinking
allows this transition to always be done

i.e. wherever a person goes
level of Eternity
always realized through the structure of Thinking

i.e. if for example Well, you don't have to think through the system too much, right?
don't think it through
it's enough to just learn to visualize it
and you can walk on it in principle
as if on some level of the path

but man is always free
he shouldn't be there even in a favorable model
for example, constantly moving
only at some model level

he may want to go in a completely different direction

and so that this desire

for example it **still** means the same Well, let's **analyze** it

from the point of view that everyone is given equal rights

someone can do someone is studying there

or it doesn't do that there

but he still has to live forever like this

anyway one way or another

therefore, this is precisely the transition

structures due to Thinking

this is precisely the path that connects

as if it were **legal** there

at the level of the fundamental Laws of the World yes

this system of development in the Eternity of man
with that

that a person, with his well, any creative
meaning behavior

still lives all the same forever

even if he doesn't think about it as a technology

next level of action

and then it turns out that those who can do this

they do it for everyone

but who starts doing it

he still has to do it no worse

there is also such a Law

that you still need to go through the structure of Eternity

and that's when we start to analyze

that's the human factor, yes

this management task

then it turns out that here we see

the next factor in development in general

even so to speak well Reality by and large

that all Reality is in fact

it is distributed in this way

what do we see in this Reality

well, or it means some kind of continuous information system

and we believe that there is some

Well, the whole array is there

or there it is like a uniform array

and you can work with it

approaching somewhere

and some ordinary events emerge

like God does
He receives specific events.
from Macromassive ^{yes}
that's understandable

but for a person it is often easier
identify
for ^{example} for health improvement ^{there}
or Macromanagement of Personal
it is possible to identify the structure
when we have a large array not specifically there
and we take this area of Eternity
and ^{therefore} by some sectors or some glow lines
we distribute
in a more fixed system for itself, ^{as it were}

i.e. it turns out that if we
^{for example}, they fixed Eternity for themselves
as a personal structure
^{well}, a personal system, ^{so to speak}, that is constantly evolving
i.e. this is our personal path, our personal desire

Well, in a personal sense, everything is clear here
that the personal path is integrated with Eternity
and there is no need to look for something somewhere in a large array again

here is your personal path
he is already integrated with Eternity
he locked himself in the plan of Infinite development
and that's all
Infinite development is happening

also God is understandable why Personality
what is happening here then
precisely of large magnitude
expressed in the action of the individual

i.e. any
axiom ^{yes} therefore such arises
and this is like a consequential axiom

that any action of the individual
always has an Infinite development structure

and when we start from here, ^{for example}

Well, look at the history of civilization
what were the individuals who did there
some development systems
some control systems
Thinking

here it turns out that this is the factor itself
For example there is complete restoration of matter
including resurrection
it is simply the Law of Implementation
as if the primary action of the individual

where is the personality that means Well, created by God, yes
including the human physical body
at the level of a fully individual
originally created by God
realizes the same way God does
the system of precisely such a distant Infinite
or there is long-term management
for any task

first a long period
then exit to the Infinite Period

and that's when we start
this is the level of exit to the Infinite period
means to output it as a structure
as if the next management

i.e. we can see
what does it mean first some long-term level
i.e. we deduce the task to the fact that it works for a long time

and that's when the long-term level
goes to the level of Eternity further
this is where a very interesting thing arises
in general, such a dynamic level of action of Thinking

because you can work for a very long time
get any control
a person can do whatever he wants
and this is where the long-term period comes into Eternity

because as soon as we have this parameter peculiar
let's define
then it turns out that we have reached real Eternity
in its management phase

i.e. we know for sure
what exactly is this state , this level
this is Eternal development

you can know this, as it were, independently
working there on my tasks

and for example, you can do it this way
what do you actually want to verify technologically
i.e. in any case you should understand
what are you doing right yes

and yet with all this when you do it right
you must simultaneously do this action
how to try to pass it on to others

and this must be a very precise state
it doesn't matter that you learned to do something specific there
Well For example there the man learned to play
there on some instrument
and at the same time he knows exactly what he is doing
or there is some problem solved by some method

i.e. you must know exactly
what is the structure of your personality development
exactly corresponds to the real Eternal development

and therefore any processes
which well as if in the long term
over large time intervals
so they are somehow implemented in terms of control

i.e. any action can actually be translated
on the control structure of its further development

then it turns out you definitely get it
the structure is already that way
that you can do that
generally speaking, often immediately seeing
where this action passes into Infinity

i.e. the task in this regard is again, as it were, simple
at the production level
consider any action at all completely
means which you commit
due to there Thinking

just some physical actions including

and look from the point of view of Infinity
what kind of development does it have?
your action
in information

as a rule it's just some information and that's it
It would seem that there is still room for development there
there is an action, there is relevant information and that's it

but for the treatment of diseases, for example
and by the way, this is the technology that allows
to be cured of any disease at all
if a person has any diseases

so as soon as we see
this thread of development into Infinity
after all, in Infinity a person is still healthy

because it turns out to be logical even
he will master the control system
naturally he is healthy there
there in Infinity

it turns out that this thread
if you watch the development of events

Well there for some reason symptoms
and look from the point of view of management
i.e. you are still in constant control
you are correcting
so that the disease would be diminished
and in fact, you yourself are bringing it to fruition
to the level of healing somewhere in Infinity

and then a very simple effect appears again
further this point is revealed in Eternity
should just touch you here yes
same again

Well, that is, we actually identified the point
which characterizes the management of the structure of Eternity
this is again a control point
it's just made
by means of cause and effect
like these logical problems

and when do you start this
this is ^{basically} directing the glow towards yourself
then it turns out that you practically decide
often you quickly solve other people's problems

because while you are conducting on yourself
you gain experience
experience ^{means} it has a glow

and the problems of many people can be solved
and quickly

People understand this and see that the problems have been solved
and in principle you can receive from them
definite answer positive

i.e. the more you help people
the more experience you gain, the more you get

and when you start to carry out this level
through the structure of human action
actions of people
then it is clear that in the structure of Eternity
^{as if in real Eternity}
there is always action
one person
and all people at once, in fact

Well, as a rule, it is perceived as the action of many people

and that's when you start to see
^{as if} the absolute structure of people's actions
this is precisely the factuality of Eternity
as systems of the real level of matter
which is perceived by a person

it is practically accordingly
^{in general} that level
which characterizes what you see
Well, here is Eternity in its full form
as it is

this is what I have now come to
what has shown technologically
to the level that you can simply perceive it

and it won't be there. The perception is normal.

as if we were setting up some kind of thought form
or we think that there is something called Eternity
we look at Eternity realistically

and that's when we really look at Eternity
then the following very interesting question arises
and positive for management
factor
what's next here then
we don't need to identify these optical points

i.e. the points are basically the way out
on the structure of the Perception of Eternity

as soon as we perceive it
we ourselves are in this management
and here is the transition between your control
and Real Eternity
practically doesn't exist anymore

i.e. it is not perceived
you perceive Eternity
but the level is such
how do you perceive it there
what do you perceive
Of course you can say it logically you can already say it
what do you perceive
With soul
In Spirit
for example with the body yes
Consciousness

so here is precisely the body factor
very revealed
as a structure for objectifying information

here's to objectify the information
to do it means to be practically systematic
so that it somehow works
it turns out that a person's physical body is needed

and then it will be clear that this factor of Perception
which kind of regulates
information distribution structure
in a large enough environment

you can see here how the body works
as a kind of ^{filter}
or management level
i.e. some information is included
and the body accepts
some information is allocated there, etc.

and yet you can see everything
Laws of the connections of the human body
with an Infinite level of any information

i.e. the simplest property to take
and ^{how to} bring the event into the area
when it is actually projected onto you

in general, you have here the ^{following} factor
that any finite so-called events ^{yes}
the outside world
they come out and dock
with the plane of that Eternity
well, exactly the one you perceive
and they become Infinite

here stands the light of the final event
get on the wall of this Eternity
naturally the event is instantaneous
as if Means well, it practically sticks together
here is the information system
the light begins to be continuous
and that's all

and the final event begins to take on
the structure of Eternity in development

and then you start to see
that any event here is any event

contains
structure your own path

and then it is clear that when you
into this ^{kind of internal} cavity , ^{yes}
into this area of Eternity
you get there
in the analysis of the situation there in Perception
then you see that any event in general
this is your own path

and the event is unique
i.e. the event does not happen by chance, yes
from this position

you see what's inside this system
you constantly find
the structure of your own answers
that's why this or that action is performed

By the way, this is a powerful analytical level
allowing you to actually solve problems
often very large in general
related to the fact that there is no macro-destruction

Well for God every action is the same
what is a private task
what is the macro task

so it turns out that here you see
it is precisely the solution mechanism
being as if in the core of this information
or let's say in the heart of Eternity there in the very center

and that's when we talk specifically about the heart, for example Yes
then we get the correlation level
i.e. the primary level of Perception
Well for example, there a person perceives
at the level of Thinking
by some organ yes if

then the heart turns out to be the most
in this case, well, it's exactly that organ
which is the very last one in line, I guess
level
and in the very first
simultaneously perceives Eternity

i.e. Eternity is perceived
For example there with the brain
then by cells
and therefore at the same time with the heart rhythm
and it ends with the rhythm of the heart

i.e. Eternity is like a static structure
and any dynamics is a difference

and it turns out to be dynamic with a heart
it constantly seems to be in control
i.e. constantly groups the structure of this information
and actually controls it

here is the rhythm of the heart, the control of Eternity
This is the perspective from which you can look at the controls

and when do you start
i.e. it is precisely the movement of the heart and the contractions of the heart
that is

then it turns out that when you start
for example, to analyze
structure of the human body
it turns out that based on this structure
you have the next level
Well, actually, self-government, yes
in the structure of Eternal development

Well, if you ask the question
there is no atlas of anatomy for a person there
and he wants to understand there
how to regulate the body in general
and he's generally well for example, there should do it
only through one's own Thinking

then you get this heart rhythm
Well, if a person doesn't know what 's inside a person, so to speak

the heart rhythm that is projected
into the structure of Eternity
after all, a person always has a mechanism for resolving a situation

and when it is projected into the structure of Eternity
then here we have the following
that any order, any movement of a person
any human movement
this is again Macro Eternity

here is the transition
from any level of person

there are cells of action of movement
it's always a kind of private thing
Eternity

i.e. Eternity has such characteristics
as a private structure
interacting with a specific human event

and it turns out that we can go like this
to any phenomenon

i.e. any phenomenon is finite
has ^{some} kind of reflection, some kind of development
as Eternal
as Eternal exactly information of Eternity

and then
it's much easier to move this event
when we look at an event like this

i.e. you can see the cell and try, ^{for example}
direct optical action
influence
This is of course possible
but it may take some time
and not all cells can be influenced
because they are often very rigidly fixed
in the structure of Reality

and to influence you just need to
into the structure of external Eternity ^{yes}
and one small cell
in this way it is better to influence the structure
a large array ^{which} is called Eternity

and then naturally a large array
due to optics this cell can be taken out of control
or some event

and that's when you already watch and learn in practice
see next to each event
^{well} it's like some kind of bubbles, ^{yes} you can call it that

at the optical level
look basically on the first level
some even look like a soap bubble
but from a logical point of view
this is not a soap bubble
firstly, it doesn't burst and that's it
and this is real management

i.e. in the structure of Eternity

the concepts have a different semantic nature

i.e. if a soap bubble is something unstable, ^{yes}
there are words
the form of words gives a different effect

i.e. sometimes it is just the opposite in meaning
here's how you can make it so that with any words
at any level of management
you did everything right

you need to be independent ^{there} from the words ^{yes}
and from the action comes

and now you take the control
^{as if} into this root of Eternity, ^{but} where there is no there
it doesn't matter what you think, even what you are
did you set the goal correctly ^{there}
did you formulate it correctly?
but you should get an accurate result
which you need

and start managing in this core , ^{so to speak, yes}
in the center in the geometric even the center of Eternity
in this information
I will work with you

when you do work try to
first of all, identify your goals ^{yes}
and yet implement them immediately

and also work on the tasks there
there are countries of the world territory
these ^{are} more complex tasks
just look at these tasks very quickly by the way
then your own are solved

the larger the array you take
the faster you give yourself
this is the level of information output
to their tasks

and this is also, by the way, ^{a kind of} technology for working with Eternity
because in this case you are taking out of control
^{in fact ,} some specific systems ^{there}
due to the large array

i.e. having worked with the tasks of, ^{for example ,} the country there

or the World as a whole

you went through a large massif

and this array is it
because in the world everything is similar
you have a reflection on what i said
what is there
and the structure of external Eternity
in relation to any event

and by analogy already specific actions
acquire the structure of Eternity
just like your specific optical action
it means it corresponds to some abstract Eternity

i.e. as soon as a person understands this
he solves all the problems at once
like he has nothing else to do
he solved the issues and that's it
everything came true for him
he can actually use exactly this technology
no longer in use

this is what is in the structure
Well, at least don't use it there all the time
or it worked once
and you can find the following system
in this control system

here is a kind of search
and generally speaking, implementation
management tool
very high

here you can practically create management
in such a way that you
first of all it means well, you create
general management plan
there are some target tasks, which means private tasks
and do all this on the structure of the substance, say, the event
and necessarily the structure of Eternity
and a multiparameter system

i.e. if we take some cell there
and we want to see
and where is it located geometrically?
this is like a level of Eternity

which touches yes

then it depends on your task
from your Perception

structure of Eternity
touches the cell from any side
or to some substance
or even to an event

i.e. it turns out that it is clear why
outer space Infinite

because there is a large amount of information
must touch from all sides
kind of management was revealed
Well For example there is physical matter
must be in the Infinite Environment
i.e. it is immediately clear why this is the case in the world

because well, as I said
here we make a universal environment
from any point of view it has equal properties
Eternity at any level

and then it turns out that we know these properties
we can get closer to the event already
if we, for example, have a structure of a kind of private Eternity, yes
some kind of spherical system

and now we can consider
even the boundaries between these systems

i.e. if you know this structure
for example now I said you already know
you can see the boundary connections
where they stick together
one Eternity another
but in relation to one event

and then it turns out
that here is the regulatory level of management
most often effective
is an intermediate environment

because the rigid structure of Eternity
often fixed to another more rigid one
as I said the properties of Eternity are rigid systems

and it turns out that here this is often the case
to compress this very Eternity
we need to look for this control lever point
as I explained it sometimes takes a long time

and if we take the environment between the structures of Eternity

after all, we in management can quite easily allow this
moreover, it is really possible to consider and do

then this environment is mobile
it is quite possible to deduce this area
already with the target vector control pulse
just some segment of the beam
and that's all
familiar control yes

Eternity is still a kind of global quantity
and you need to constantly monitor the contour

there is something like this here
this is a feature of this control system
there the Soul of man is constantly in control
the contours of this environment
in this management

and there is some kind of constant action going on
why did i say this
that it is desirable to control as much as possible
here in this seminar
that the Soul is always in control anyway
and it makes sense to simply remove the control
and consider how this is accomplished

and it must be implemented without fail
what's most interesting is what you can see here
that it is really possible
in the technologies of Eternal development

because you see it here
what do you practically have
in general, it is quite a powerful mechanism
in general, a very powerful mechanism
when you are at the expense of Consciousness
here is which perceives the structure of Eternity
go into the structure of Macromanagement in general

and in connection with this, it is precisely the intermediate environment
which allows us to select vectorially
the structure of Eternity
as between Macrosystems
this is already the management of Eternity
due to the external environment, so to speak

and as soon as you already move on
on the management structure of Eternity
due to the external environment, the task has already been solved

i.e. the properties of the environment are different
well, some level between the systems of Eternity

and it turns out that when you look at this system
already as if from the outside and you work as a kind of vector
then all the arrays of Eternity
are already under your complete control

because this is the control acting on your goal
as God does
single impulse control of goal solving
and all
all Macroenvironment Eternal environment
is in motion

and it turns out that when you already know this level
then you see that any control action
it is simultaneously the management of the entire Eternal environment
and what's more, you can even see it
how is your action
interacts with the whole world
and how the whole world is regulated
as if from your action
Well, at least you can perceive it in Spirit

then it turns out that you manage harmoniously
and you will definitely achieve your goal
that it is precisely in Eternal Life
It is necessary to diagnose the level of harmony

then you will be sure
that in any event
at any level of information
regardless of even words
how did you set the management goal

are you doing it right

very accurate or not very accurate, what do you think?
you still achieve control in any case

in Eternal Development this must be done without fail
because there are a lot of situations there
and always think right or wrong
this is also a question that requires analysis

you always have to be sure that you are doing the right thing
and then Eternal development is ensured

and this technology allows it
this is always the right thing to do yes

beyond constructions beyond concepts
and only in general, in principle, even in normal management
due to Thinking
due to allocation
this is the structure of Eternity management

This is where I end today's seminar.

Thank you very much for your attention
