

GRIGORY GRABOVOY
External signal control
8-9.08.2005

Hello again
the topic of my seminar today
This is my Teaching about God
External signal control

in this topic i show
how to implement management
by means of an external signal of some information

i.e. the information is divided
on the external sign of some information
and management of any area
is carried out through an external signal

as well as control of its own external signal

i.e. in this case, for example, in the Action of God
there is such a principle
that He exercises control from any angle

and therefore in this case
the control is exactly that multi-angle
where is the simultaneity of control
and an external signal through Him
this is one action

for example God who carries out Action in management
Well any other system at any distance
He does this through some area.
but does it directly

i.e. that's why in this case
the management will be carried out in this way
what if you do management
any area of information
then at this moment you can be present in the management
generally speaking in any other field

i.e. there is no spatial or temporal connection here
in management

after all, God does some kind of manifested management, for example
and at the same time is present in the unmanifested, for example view

as a control, so to speak, in any system

that's why it turns out
that is exactly unmarked yes control system
in this case it is also control via an external signal

because if we are the designated level
we manifest as an internal system
then any unmarked level
which does not appear in the information
we can consider that this is the external side of the action

for example We can consider
area of information simply
and count
how is the outer part separated from the inner part yes
that's how it is
what is external for information

so here is super fast access
or there is a value that has not yet been realized
in information

from the point of view of human perception
this is external information

and therefore control through external information
via external signal
this is primarily in this case
Means the ability to create such management
as for the formation of, for example , external information
you are already practically forming the result of management

i.e. your control speed is so high
that even in super fast control speed
you have something next even faster

i.e. the ability to see beyond any control speed
already obtained, as it were, external result

and when do you do such management
then for example for cases when we are talking about
about the treatment of certain diseases
then here all the time there is endurance

status of positive information level
Well leads to the fact that in the collective Consciousness
it is the level of the Norm that is established
for a specific person

then the person recovers

i.e. it turns out that the goal is a kind of dynamic goal
in this case it is realized
if you hold it all the time
some kind of ideological statics of management

and we have a transition of the ideological level
into the structure of the material level of management
i.e. transition to the internal system

we set tasks
so that a person is healthy
and it turns out that a person gets health
because of the ideological status
it's just that the task of health remains constant all the time
than the implementation of some intermediate event

and thus external information
after all, it's like information from the external environment, yes
information environment
becomes Reality

and this is where it comes in
element well as if the next task
that how does a person perceive information as such
i.e. how does he make it external let's say yes
how does he perceive her at all

then here you can see such a level
Well signal differentiation in human consciousness
that any external information
this is something that happened somewhere
or there in the Infinite Past
or in the Infinite Future yes
in two versions

i.e. it turns out that the information
precisely as a certain act that has been carried out, yes
perceived

i.e. if ^{well} some action was not shown there
or it cannot be shown there
it turns out that this information is not highlighted
in this management context

so it turns out that there is a certain system of actions
^{for example} in information
that at a certain level

some level of action is always taking place
^{Well} or there in the Infinite Future
or was it ^{for example} in the past

and highlighting external information
i.e. control through external information
any other system
^{Well} just using information
as a control element
^{Well} more like in mechanics or something management actions

in such a mechanistic understanding
what if we see some level of management
then this level can be used
as a supposition ^{Well} some element of action

i.e. what to manage

here is the information that looks like this
what is this element
"what to manage"
i.e. the element of action
can be distinguished precisely from the level of ^{external} tasks
and use ^{well} as if it were unique or something such a "pusher"
this is how one can express it
element of light
and with this light influence the structure of events

i.e. it turns out that the external signal
stands out
like a system ^{for example} World Events
and if the event occurs
then it happens ^{for example}
both in the past and in the future ^{it turns out to be} time

i.e. selection somewhere at least by two points
of the same event
i.e. an increase in the coordinate systems of events

and due to this
we get well more like an intense glow system
and this glow can be used to act
to another event
i.e. somehow influence him with something
i.e. we find material for influence

and this is control via an external signal
it is at the same time the ability to obtain this material

for example, if you ask yourself a question
how does god influence
something stronger, something less
and follow the analogy

then it turns out that it is stronger
It influences where the mass of His information is
in logic
higher than the control object

i.e. more concentrated information
acts on information
Well which may be more sparse

it turns out that it is going
either replacement or management
on moving information to the desired point yes
to the control point

and here such a moment arises
or there is influence
and the information is simply replaced there, for example

i.e. the result itself
this is a more concentrated area
which replaces a less concentrated area
it is in the information itself, as in matter, so to speak

and you get the result

or you just move the target information so to speak
to the point where it is realized in space

and from this point of view it turns out
what well for example ancient management practices

when there was an increase due to meditations
some special Spiritual technologies

were exactly called upon
influence at the same time yes
both on the external and internal structure
i.e. the spiritual level influenced, for example
to an external control system

you can see it here
that the translation into the system of, for example, future events
where exactly is the movement taking place
not a replacement but a move to a control point
develops first of all

The spiritual internal structure of the manager

i.e. he receives a return signal
in the structure for example there Soul or Spirit
and due to the already regulation of the signal inside the Soul
it gets a multi-angle level of control
those. multicomponent

it turns out that this is more the work of the Soul
i.e. internal work

and to get an external level of control
in a more active way
an internal level of control is needed
make more active too

and it turns out that well for example there in order to heal
there is any disease at any distance
you need to choose such a control point in the Soul
that information for example access
in any phase in the collective Consciousness
about this disease
for a specific person
it is not realized as any external information
there in relation to any other person
Well i.e. it doesn't exist anywhere, yes

i.e. the ability so well should I endure it?
status of the relationship between neighboring areas
Souls of man
that external information simply does n't penetrate
in relation to any person

and that means we have such control
that by means of ^{for example} there external signal
where there is a high concentration
as if the matter of information

we can output control
on the structure of the Soul
starting here it turns out like this
that we are starting to form external management

but it turns out that it's happening somewhere
transition to the level of the Soul
and this is the level where it happens
where the impulse loses ^{its} discreteness

i.e. we observe from one side

for external impulse
and then if you follow the management
then you can see that the control ^{seems to be} smoothly transferred
into the management structure from the Soul of a person
external system

i.e. the Soul looks like a system
which is in contact
all the time with some external World

and it turns out we can in the Soul of a person
highlight level
which is always at the level of a border , so to speak
between external system
and ^{in general, actually,} with the Soul, ^{yes}
with the matter of the Soul

and here is where the level arises
where can you see the transition
from some kind of external matter
to the matter of the Soul

i.e. we are approaching the structure of the matter of the Soul
in your Perception

because in principle there is a Soul
it is visible, ^{for example,} in optics
Well and how does it look materially?
at the level of information, ^{for example} , ^{yes}

at the level of subtle matter there etc.

so, in order to recognize the material structure
Here we need to keep in mind the following principle

that the Soul consists
from, for example, there including from the matter of the physical body
i.e. the glow of an element of the physical body
also constitutes the matter of the Soul

but then it turns out that in the physical body
there is a reverse angle
Well which contains the matter of the Soul
as if from the point of view of Perception from the physical body

Well for example God has information of the Physical Body
has a Physical Body at the same time

but for God in His good mental concentration
it's the same thing

It reproduces the Body
because He has a physical body, for example
Well as if in the next future Infinite development
it's always there

the same thing with humans
This action element is related
in the exchange of impulses of this nature
between the Soul and the physical body

i.e. so that the body would be Eternal
this is the external signal
in relation to the body
and in relation to the Soul

i.e. for the Soul the information of the physical body
This includes external information

and vice versa
this signal should be continuous
and be controlled somewhere
then the body will be Eternal yes physical human

so this is this control
is found in any cellular system
both on information and on physical Reality

i.e. we found a point that denotes
in terms of functionality they are the same

and here is the imposition of the physical body
with this ^{seemingly} informative Reality
at this point
gives us the center of stability of the external signal
anyone in the world in principle

this is the fundamental structure of the World
if we actually take
information about your physical body, ^{for example}
but in principle, ^{for example}, we are talking about the physical body of a person
or about the physical body ^{well} any other object of Reality

the only difference in humans is that
that his signal exists continuously all the time
at the moment of this action

movement of information of the physical body
to the point of ^{, as it were,} universal conformity

and others have objects of Reality there
there is a level of discreteness there

i.e. when a person moves to this point
there seems to be no movement

for ^{example}, if you look at God
in every one of His actions
It is also static all the time.
i.e. He does not show movement
there is always

the same ability to move systems
without showing movement it turns out

and so if you ^{well} so think about it
how does Thinking happen
then Thinking with great dynamics of actions
any perceived ones there
in fact it is a static system

i.e. look at a person when he thinks
he has to go to the store to do something

there are a lot of things to do there may be a lot of things to do
dynamics such a stormy life

and the external system is just one thought

so it turns out that inside this thought
there are many actions

this is how they generally open up
how they move into the implementation structure

i.e. why does a person move ^{yes} here in some direction

i.e. life as a system that is initially manifested
as absolute life

and at the same time you can observe
as for the system of action
i.e. the internal nature of precisely the movement
where does this movement as such come from
Well like a physical system ^{yes} matter ^{so to speak}

and here we have a separate level of a different type
i.e. we found, ^{for example} , a concentration point
in overlay
where the docking takes place

informative
physical
there is Spiritual Reality

and movement is a constant impulse
from this point
into the structure of action

i.e. to understand the nature of human action
and generally speaking help him
so that there are no problems there

^{for example}, here is a system of concentration on numbers
it is based on that
that you can even calculate the number of pulses
emanating from some kind of matrix nature of man
static absolute
and the dynamic level of his own awareness

i.e. the faster a person realizes Reality

as if or what? arises more intensely
next number of pulses
access to information to it

i.e. you can literally count them
and assign number systems
just counting how many informative segments it has
comes into Perception
in some action

that's where he needs to live forever
so many segments arrive in this interval
this is such and such a number series

and you make a concentration on this row
show on information
this series to a specific person
or even if you are busy with yourself

and this strengthens and generally speaking often leads
in full compliance with speed control we assume

i.e. you start getting the result of healing there
somehow backup information
from the point of view of Eternal development, etc.

i.e. the rows come as a simple counting system
behind your appearance or something level of development
what you yourself see in your Consciousness

i.e. an external signal is obtained
for you it is a system of a kind of ordinary counting
or there is ordinary Perception

and when you start to see
how do you even think
i.e. where is this detector ?

this is your usual Perception
i.e. you look as if you were looking with your eyes, for example
behind these light signals

i.e. this is exactly the level
Well some kind of fundamental clairvoyance
where do you work
at the level of primary information signals

and from the primary signals you draw a conclusion
which can already be adjusted

i.e. this is the level of precisely controlling clairvoyance
where you ^{kind of} hold a point of control
and it is an external point of control
for information

and this point of control is always there
on some kind of train of events
precisely in the optical version

and you track it ^{well as if} you are scanning all the time
in case this train changes shape
or you don't like him in some way
you can quickly find yourself in front of an event

because you
^{Well} on an optical level it looks straight
what is the component of events and all of them
is in the form of a certain element of light
and the light moves towards you

on information
not physically to you
and in fact to the place where your problems are solved

and this is the place where your problems are solved
Generally speaking, it is not indicated in the information
they are just deciding

for a person it is a place that does not mean anything

specifically identified information

For God this is hard information
He has all the problems solved

but for a person this is just the place
where there exists, ^{as it were,} an external Reality
i.e. the world there is not yet formed

and if you think about it
why does the world exist ^{for example} in elements
which are ^{there} Well have different nature ^{yes}

then here is precisely the lack of form of the World as such

makes it so

this is exactly the space
where events external events have not yet been realized simply

and that's when we start to enter this point
Well actually such
maximum level or something education
for the Soul so to speak

where the Soul perceives
maximum information in action

then here at this point we see
that any action is always directed
Well to some private counter tasks
from you

and at the same time you find yourself
passing this certain center of sorts
as in some local action
so in the Infinite action repeated so to speak Yes

multiple reflection
or there is multiple implementation

i.e. it turns out that you begin to see
what is your correct action
it arises in this way
that you see your own matter
i.e. the matter of presence yes your Soul for example
at any point of information

i.e. passing through this area
The soul begins to have multiple effects immediately

Well in general it looks like a kind of reflection
it's actually simple
such instantaneous spread of the Soul
in all areas of information

this is the internal property of the Soul
Infinite presence in any system

and here's to identify
the system of the Infinite presence
we must every line of this light

which is obtained from the action of the Soul
make it virtually infinite

i.e. so that a person can live forever
he should be able to do it
technologically create the Infinite System
in information
matter itself must be infinite for him

so this property of Infinity is quite simple
an event is selected as I repeat again
which should be
but it hasn't been formalized yet
the impulse of the Soul is conducted through this area
and the region essentially exists
and everywhere
and as if only in the area of your goal

you still have ^{it no matter how} you consider it
since the event did not happen
then it can be realized in the information space
anywhere

and you act only through your goal
and what does the goal mean? impulse of your Soul
those. start from the purpose of the Soul

and you get your own goal
which is protected completely, absolutely practically
from any interference ^{there}
you decided to make management of any event there
impulse made from Soul

but it turns out that you took
after all, there is an external impulse from somewhere
you see it from the side

means to control an unknown area
you form the external impulse of the Soul
and that means that this is, in general, the very matter of the Soul
because there is nothing else further on

and now you begin to see
the material expression of the human Soul

then it turns out by analogy with that
how do you see the Soul of God there
where is the Soul of God
and the whole world at the same time
and God Himself
i.e. in personal expression

you come to that
that God has this point formed
and do you manage to find it?
It is enough just to look at God where it is
and do it through the same point

so in this technology
precisely due to the external control impulse
you can do it
from the target impulse of the Soul
only at the point where God does

i.e. it turns out that it is impossible to make a mistake
selection of an external fragment of information
there is already protection against error

and therefore it is understandable
why did God create the outer world
creating another there yes human

i.e. He guaranteed it to Himself
absence of errors in Infinite development

and when we start this technology
Well to master there
from the point of view of practical application there

it is clear that due to some super-fast action of the Soul
you can always get a controlled event
which can be improved there in dynamics

you can take it and create it for him
Infinite development status for improvement
i.e. take and stretch the control axis to Infinity

not in a temporal way but in a spatial way

i.e. transfer to the management structure
due to substitution
Well even the conceptual apparatus of management

you take it and look

Well an event that for example there is no solution for example there's no way

it's clear that there's something here

Well there are events of different kinds

sometimes there is very little time there or something else

and you take and change it to such a level

that you are pulling space into the Infinite phase

in relation to time

i.e. you make space

external control element

in relation to time

i.e. as if by an external signal

which is precisely a signal

not even the space itself

and some kind of receptor characterizing that

that once upon a time there was

in relation to this action

i.e. you exclude time but enter the characteristic

what yes in relation to this action

time existed

but you enter it constantly

in the area of ultra-long-range control

then it turns out that you are always solving a problem

i.e. making one impulse

the problem is constantly being solved

because time is trying, as if it were even visible

that here is the allocated time segment

it starts to push like some kind of spring

and tries to get back into the primary impulse system

i.e. return to the previous system

while space

for example, it constantly evolves into Infinity

i.e. the matter is embedded and informed

to solve your problem

it's increasing

i.e. the task is improved

and temporary status
where the problem existed or could exist
it has all the characteristics all the time
the same action
i.e. exit to the primary state

and from here the status is clear , for example
what is the level of full recovery there
any creative matter
it is completely obvious for the simple reason
that due to division
structures of time and space in management
Well even like in the thematic system

we see that here the development of the spatial phase
there are primarily emerging systems
has an absolute character

i.e. if the system arose primarily
as a creative system
Well for example, it's not a nuclear bomb there
but simply any object of information
which can develop infinitely

then these systems they have
absolute status of Infinite development
any creative element
always has an external context of only the Infinite Plan

but that's how any external system is
she is of the Infinite type
in space well Infinite Peace

and it turns out that the outside world
as a system of rigid connections
or a rigid matter system
can only contain an Infinite object

there is the following property of the World which as I explained it
revealed as a result of some action
to the information plan

and then physical matter it looks like
like matter for example Well revealed yes physical
and or there is even informative matter
looks exactly like matter

in the form of an optical system

and at the same time it is a certain space
which contains the matter itself
but has the property that it contains matter
not at the point of her Perception

after all, God is always outside the system, ^{yes} management
and He was the one who initially created all matter
so in principle it is clear
that ^{as if} the True nature of matter
is outside the access system

i.e. for example a person is looking or ^{well} any level of management
which is being implemented
in relation to some matter
always gets into status
which is an element of interaction
the very wave of management development

in general, what does a person think about matter?
and this element is superimposed on the matter itself
at the moment of dynamics

i.e. only God can understand ^{yes} it turns out
The true structure
where He is present there is universal knowledge

so that a person has the same
it should receive all external control signals
in such a specific volitional order
collect at the point of sale

i.e. to be able to do
^{Well in fact,} this task is somewhat non-specific
that the impulse that moves to the point of realization
he can be
both the future impulse and the past impulse

i.e. matter that does not have a time factor
matter as such
isolation of the structure of matter in its pure form
and of any matter

i.e. at a certain level of distance
from the structure of the primary impulse of Perception

there is an element that leads
to the concept of "universal matter"

and now if this universal matter
introduce into the human cellular system
at least there in one cell
on information as an external signal
we get
quite a strong level for example there is rejuvenation

and in principle everything turns out very simple here
the point is considered where the action is not carried out, for example , the
movement of the impulse of some
to this point
and a fragment of universal matter is released
which is introduced specifically into the cellular system
maybe there is a separate human cell there

and it turns out that we can then regulate
from its one cell
all functions of personality

i.e. the supporting level of the entire personality system in general
there can only be one cell

moreover, the reference level
may be external information
here is the movement of this control
in relation to a person

this means that a person has an absolutely regulated level
which generally speaking has
absolute or something self-control system
that's the logic

because if any impulse
is a means of achieving precise control
then a person can always behave in the right way, for example
somehow correlate
if he pays any attention to it

there to collect adaptation
to some external influences or actions, generally speaking
highlight the structure of the external world
and get your bearings and collect
structure of the material level

i.e. ^{well} It's easier to create health elements

the main thing in this system is to have some kind of driving mechanism

i.e. what drives a person in this system

are there any motives

or some motivation motivating elements in the form

motive as sound

and motive as action

i.e. the sound of the Soul ^{yes}

there is no information there

there is simply a motive

but this is action motivation of action

when you start to see the controls

let's assume it's coming from you

if you think about the structure

how words turn into action

as external Perception

goes into action

then any negative systems there

external perception

they only pass into your understanding of the control system

i.e. in the structure of your understanding you are completely free

and external any Perception any opinion does not matter

you move only based on your own motivation

and always absolutely accurate

God created just the second element of information

this is exactly what you can see in this technology

what exactly the Eternal Control Element created

it turns out that the ability to find your own internal motivation

output into a material ^{as if} channel material channel

not just there to motivate something for something

i.e. motivation is not just management

it's also the ability to prove

to the external system and to yourself

why at every continuous moment

you are doing something

continuity system in action
this is how the Soul is structured
each element knows everything about its neighboring element

and for example you got rejuvenation there
due to ^{some} kind of cellular regulation option
then it turns out that you are at this level
do you have

Well motive for example there is Eternal development due to action

and at the same time you get
the structure of the action itself

i.e. motivation contains the structure of action

in the future it will be visible immediately in this control
this is when you make a super fast level

Well as if to analyze the situation for the future

then it is clear that the answer is already there

i.e. you know the answer and move knowingly ^{from} the external environment

Well, God knows anyway
in disseminating your information
what's happening

here you do the same thing management
do you know what will happen in each next action ^{yes}
in each subsequent development
your action

and it turns out that the person who is
in the structure ^{well} actually speaking of their actions
completely defines the external system

which means there is nothing complicated in adaptation, ^{for example} Yes
regulation of the actions of the individual
in relation to the external environment
there is no here
because all the time it's only about that
so that a person would recognize, ^{as it were,} an internal system
their motives and perceptions

i.e., he singled out ^{, as it were,} a fragment of the inner World
and worked only within this system
i.e. he only needs to determine the point
where events occur
and that's all

i.e. if it starts to define a point

Well there in the right place

Well For example there in concentration of attention
near the physical body

it turns out that he receives the whole complex of events
and logically well personality originally determined by God
after all, this point also exists in humans
and he, for example , can rely on it

and for example there is self-assembly of self-organization of man

in some controls there

this is this point

Well as an external signal some external glow
near what is a person for example there Well collects yes
your information structure

this means that this is the level of some Infinite environment
which is projected to one point

i.e. the external environment

it is not yet defined as information
but she is Infinite

and it turns out that any finite, so to speak
identified control element
always connects with the Infinite phase

i.e. there is an algorithm , so to speak

then you get an assembly of your own personality
in management

it is very simple

any situation is like that
that interacting with the external system
you must receive Infinite Development Value

i.e. self-tuning as if of a personality

self-regulation of personality

and in Eternal development it turns out that it is necessary to track
basically everything works out there
as if several even the simplest parameters

in the optical range

what is Eternal development
and regulation of the system

there in terms of distribution
again the structure of Eternal development
how does it happen

and, in fact, Eternity itself, for example
what does she look like in Infinite level
Well what is this what element of light

and moving all the time at this level
all external Infinite quantity for example Yes Peace
like some kind of well projection or something for Perception

here is Perception
and there is the whole outside world

so that the personality of a person can assemble itself there, let's say yes
he needs it, it turns out that in the Infinite World
define some criteria
what should he do now anyway
Human

i.e. it collects itself in the outer area
and gets action for himself
in some specific expression or something even in everyday life

i.e. he is doing something in one place
and the assembly is in progress
in the structure exactly where the influx of Infinity is
to its phase of events
it looks like a systemic action
i.e. it perceives the influx of the Infinite phase

Well, if you imagine
how does God perceive Infinite information
is on Him and it seems to be approaching or something

He is the Creator of all Infinite information
but He has elements of Perception
how He perceives His own World

i.e. He must perceive Himself, it turns out
at a certain level

if we consider this fragment of Consciousness
element of perception so to speak God
then He achieves super-powerful speeds
It creates simply from an external point.
like these speeds well artificially accelerating
and that's all

He takes the system there and models it.
is located at the outer point
and the point of Perception is connected to the external point
and these elements of light are spinning

why in principle, for example , in the microworld
these are the elements of torsion that are visible

and if for example
Well I mean these are different actions
photonic type, micromolecular type, etc.

if here we start this element
recognize in such detail
by the way, the influence on a separate element of light
can instantly restore a person's health completely

because here the connection is absolutely direct
the projection goes to the whole person
and it's only worth fixing there
some well there is a level
which may differ from the norm
this can happen instantly healing firstly

and here there is more powerful control
related to the fact that a person has a visible line all the time
where he can completely develop his own personality
collect
like at the level there Well any impulse of action

i.e. he is completely confident in the management
because he can do it
For example there is self-recreation of one's own personality
in any interval yes

Consciousness control
for action and for development
for one's own personality

then it turns out

and what is self-identity for a person, ^{yes}
who is a person for a person

i.e. this is what happens here
that there is some element of memory
here is the one who knows or who ^{kind of} implements
personality

and here a very simple element arises
in management
current state of personality

Well For example there so that there would be no nuclear war
what should be done in this case then

a person simply remembers the current state
oh ^{well} every person remembers

and the next state
i.e. a transition , as it were, to the next layer of time
is carried out through clear memory
Well like a current one or something personality states

i.e. there is a pushing of the personality structure
to the next time layer
and there is a discrete nature of the organization of any substance ^{yes}

i.e. from God's point of view
any substance
is in an equivalent state
i.e. its management is equivalent

and here it is happening
presence as God does
for super remote areas under management
like a local element is being pushed
into the next substance

Well i.e. for God it is an extremely distant quantity
for a person it is just an approximate value
the difference is this
i.e. a person by an effort of will
pushes the management structure ^{yes}

it turns out that it is precisely the continuity of management
i.e. exit to the local system
it is precisely this that forms
Well i.e. some kind of cause-and-effect relationships

and now you can go out through them
to the event area

i.e. through human logic
through Human Perception
the event area is formed
which already has a spatial magnitude

that's exactly what we came to in this system
what is the undeclared event area
where it has not yet been formed
it can be formed
in the logic of human thinking

Well, that's right, he can admit that something is happening
Well it's like this, in general, a completely simple explanation

there is actually a deeper connection going on here
personality connection
i.e. Thinking
with matter
and with action
inseparable connection

in the structure of the action
the personality bears the tasks of the unity of matter

i.e. in material terms
there shouldn't be any difference
this is where the event takes place
where there is no difference in material level
Well external observation or something

This is what you need to pay attention to
what are those events where well actions are carried out normally
i.e. you set a goal and the goal is achieved
has this level as if one nature of the reverse impulse

i.e. it is clear that everything is fine
because there is such information yes

and the information looks like this
as information and not as there
there is a man here
there is some information here
here is the construction

primary level of information
just information
that yes the event happened this is knowledge

i.e. integral knowledge
it is the unification of all forms of information
means knowledge
this is one of the impulses of the unification of matter

if we consider such a process, for example
as in nature in the world in general
some elements interact
there in the form of some regulation yes process

why is it arranged this way in the world
that there are some kind of waterfalls, plants, etc.
this is how the system of these connections is distributed
in information

then we see an internal, more clear flow
some knowledge

i.e. here is the control element
through the structure of that knowledge
which are a universal property of interaction
elements of nature

and it turns out that at a certain level
naturally the personality of a person
can always recreate itself there
at the level of action without interruption

because in logic you can still move the control
into the future from oneself as if
because there is still external knowledge
and each system contains
full information about the person
about everything in general

i.e. the structure is external or something nature of personality
can be found in your own action
and in the external environment

and it turns out that if we, for example, the external environment
Well we see that the external environment is, let's assume, like this
that we can rely on

and get all the information on personal development

well then just like God does

He has a whole personality there .

has the ability to self-recreate

as if from any element in general

based on any point

He can also recreate himself at any point in Reality.

the same for a person

the only difference is that

what you need to be able to gain knowledge about your own personality

at any point

which means you need to be able to know any point

i.e. feedback

if you have access to management

get all the information about this system

so you were basically able to create

structure of one's own personality

* For example through the knowledge of this point

i.e. through the function we get personalities

the function of knowledge is one of the functions

which means you can create a personality

from intermediate level

i.e. there is a goal of knowledge

and from an intermediate level, as it were, of a state of matter

you create a personality yes

and what is the level well or something more basic

the faster you can do it there

For example there is self-recreation

i.e. the person is absolutely protected

from any accident

a person can recreate himself

at any time interval

and anywhere

and based on this, if this concept is in management

Well move it like a system or something in space

where is there external information

and there is an internal system

where is the internal where the personality recreates itself
including the physical body

then this is this level well some kind of continuity
and of course he looks like that
that a person lives according to the level
some internal biological processes for example

then there is a projection all the time into the internal system
this is a constant system of interaction
with some knowledge, i.e. as if a collection of knowledge

there is some kind of information channel, so to speak
it looks like just an element of knowledge
where knowledge has an Infinite status

Well and in general, if you think about it
over the system of the device of such a concept as "knowledge"
then yes this is Infinite status
a person receives some information
and constantly this information leads to that
that he is moving in some direction
i.e. there is no discontinuity

so the criterion for that
that nothing happens to the person, well kind of negative yes
it turns out that you get some specific information
i.e. constant receipt of information

then it is an element therefore well what are human actions
is an element of Perception

if a person is on the first level

finds a channel of constant Perception
then it is actually guaranteed
from the presence of some well in general, let's say there is a real problem

i.e. the ability to identify the structure of Perception
some future element
even if it is optical, but precisely the future

and then it turns out that a person is constantly moving
towards future events
and there are no difficult situations there
there really are some here
Well such that it is impossible to decide to happen there

it turns out can't

then the only criterion
for the Eternal Development of the Personality
external signal extraction
and the ability to perceive information from this signal
and that's all

at least you are considering this signal ahead

means placing information in the external level
precisely as information from an external signal

and then it turns out
information of Eternal development is provided to man

i.e. it must highlight the signal as external necessarily
separate from level for example there is a personality of its own
and that's all

so here's an example there is an appeal to God
this is still an external level of human action
he appeals to the external level of control
to God
this helps it to act more accurately , yes
that's why even

and technologically the selection of this signal
as an element of future events
ensures events of any complexity
his own self-organization yes
self-recreation for example on information

it is clear that it is impossible to influence a person in any real way
Well maybe it's possible to somehow distract attention there
there are some events there

but the personality cannot be influenced in any way

it means the personality has
property of absolute stability
and in this technology the selection of an external signal
this can be seen quite clearly
for example, by motivation
i.e. from the inner level from the level of the Soul
through the allocation of an external signal in action, etc.

so here I think it is appropriate to practice
isolating the signal just the signal
and seeing how problems are solved
because you actually control the future

i.e. you take
because signal extraction is the next step
God has every action from the point of view of man
this is the next action

and you just highlight the signal
and then the future is well actually has
continuous level
i.e. it's yours but you're still there
then nothing affected you

no matter what events happen
nothing affected you
Well in a negative context it means

i.e. everything is developing normally and positively

and this is a good development
this is the level that allows
you also need to develop practice

i.e. next time you already have practice
to overcome yes the following events, etc.

This is where I end today's seminar.

Thank you very much for your attention
