

GRIGORY GRABOVOY
The Teaching about God
Formation of body action
05.07.2005

Hello again
the topic of my seminar today
This is my Teaching about God
Formation of body action

in this topic i show
how should it be formed
impulse for further action
for example which exists in information

and the impulse is such that at first it forms
human physical body

i.e. at the optical level
man organizes his own body
from seemingly external information

and then it works out
that the action comes from the body
it's like a formed Reality
physical body
and at the same time informative Reality
in terms of action on information
at the same time, the physical body always exists

i.e. with Eternal development
we must be able to form the physical body so
to have information about any action
contained
it is precisely the aspect of the Eternal development of the physical body

it turns out that at this level of management
we get external action
as an action taken from the information environment

i.e. all external information
which falls on the physical body
at the level of primary creation
that's when god created the body

for example, how does God create all bodies ? for example in management
He creates them at some point according to logic.

although then people are born with their own level of development

however, there is a primary level of creation of bodies
which this level was originally laid by God

as if to the primary level

as if the emergence of all information

i.e. if you look

all physical bodies, for example people

and information systems of manifestation of these physical bodies

it turns out that there is some kind of primary center

where do they develop from?

all these bodies are at the level of information

i.e. primary information exists

as if to the physical body

and it turns out that the creation of a physical body

this is the ability of this primary information

use and translate into the structure of the current action

i.e. mechanically at the management level it looks like this

that we are entering the system of primary body creation

This system is translated into current time

and from here we get the glow

which creates your own physical body

i.e. all external information is obtained

Well, the one you need

all impulses that you consider possible

in the organization of your physical body

these impulses can be translated into the body itself

and it turns out

what is at the level of Perception

a person thus formed, for example, a body

he can see all those impulses

which correspond to the physical body

like a reverse control system

i.e. he begins to recognize with his Soul

what exactly are specific optical impulses

in Perception

they created the body

it turns out that we have
a kind of system of knowledge
where the physical body corresponds
some specific optical quantities

i.e. the person remembers it
and with practice of development he begins to see
in general, the aspect is of the following order
what if it already exists
absolutely rigidly fixed there
physical some optical elements
behind the physical body
those that organize the body
from the external, as it were, space

we can see very clearly here
what happens then is to assemble a physical body, for example
well, in a normal, healthy state
by one's own will
this is basically a simpler control option

i.e. the ability to technologically understand it
where is each of the pulses located
how to remember their location
some state of these impulses
and be able to somehow attract these impulses closer to the body

i.e. in fact we are talking about that
that these impulses are simply recorded
in the form of, for example, some physical elements of communication even
between individual elements of the physical body

and these impulses when they move forward
to the management structure
physical body
it turns out that we can have practically
well, for example, the full extent of Spiritual action
including humans

i.e. Spiritual level
as the level of information dissemination
physical body into Infinity

then it turns out that the physical body
due to the fact that the glow of the Spirit's information, for example Yes
crossing the information of the physical body

in optics
begins to spread this glow into the Infinite phase

i.e. in this case
Of course it spreads first and foremost
not information as such but the physical body
and information about the organization of the physical body

i.e. still an informative phase
which interaction
Well, precisely with the optical control value
starts to act
on systems almost everything in this world

and it turns out that the physical body
affects the system of the entire Universe
due to the level which can be called, for example,
level of pre-organization of the physical body

then it turns out that at this level
it is enough to simply collect in a healthy state
any body
because at this level
the information system has not yet been defined
which is connected with the body

and for Eternal development it is quite convenient
use this control to get
status in general of Eternal development
due to the fact that we precisely control or know
what is near the physical body
and what about us ? in general we can consider it
some elements of physical Reality
information systems yes
or some of your personal affairs

and it turns out that we are through the system of Salvation of all
we can highlight our personal affairs
as a system of specific actions
i.e. specific events
and specifically, generally speaking, glow
no one in Perception

then it turns out that when we draw this line
to the system of organization of the physical body, for example
then you can see that this component differs in that

what if this is the level of organization
or so to say the life of the physical body
this is a level that has a certain spectrum

Well for example, there are golden shades
are usually visible in the controls

then the level of events
related to your physical body
this is the level as a rule
there it is silvery-white to a greater extent

i.e. life is yours
on information human life
differs in the level of spectral depth of control

and it turns out that by interacting
between systems for example
physical body information systems
and logical systems as if
which relate to information about the body
we can follow
how does the impulse that comes from the body
generally speaking, it directly affects the event

i.e. from information systems
move to direct action systems

this is where we need to immediately include it into practice
this is management
i.e. try to make control right away
according to your personal tasks system
or at least for one specific task
where the physical body organization system is included

i.e. to see the body in control
not only the body
and the structure of the Soul
Spirit
Consciousness
at some level of management in the future

make the control so
so that you can make the organization of the body actually
physical body

for example there in the current time

and get a comparable organization
in the future

i.e. if now you were able to make this organization
and you already exist, which means that somehow you did it
at one time and earlier for example

then it turns out that now
ability to disseminate known experience
this is management in this case

thus the action of the physical body
or action formation
this is what forms the body itself

and the ability to extend control
as from the impulse of formation
and from an already formed body

where the body is formed initially by God generally speaking
in the structure of the universal Reality

and in addition you also do the management
on formation as such
i.e. you enter exactly as if into a level
some kind of such format even
primary body formation

and when you start to see
that it is because of what you have formed the body
You seem to be quite active, don't you?
the level of management of future processes there

it turns out that the formation of the physical body
it is often the ability to understand, as it were, interaction
well, an already created and existing physical body
and the ability to differentiate
where do you get this external control from anyway?

well, like the so-called energy and action there
or what you perceive
as an element of the next action
the next system of body development or something

because in essence we have
Well, in this case, it's quite complicated, isn't it?
in the management system

because I speak complicated
that every impulse in the physical body
forms an element of external control and supervision
behind the action

i.e. it is still a complex system
information around the human physical body
she is very multifaceted
and generally speaking an element of action
always has a system of external control
over the action

so in order to carry out
one action with the physical body
into the structure of the external Infinite development
you have to have it as if Well, I mean there in the management

it is necessary to have that they exist
as if it were a system of external or multifaceted action

and when do we mean that such systems exist
and we really have them
i.e. what to keep in mind in this case
in general, have information

it turns out that we can see
that one single action
why does it immediately become multidimensional

because the external control system
it's increasing all the time
because really every element
in the physical or even in the informational World
it is built so that if some system operates
There is also external control over this system
some external

and in the end we come to this
that when God does management
he initially makes this management like this
what we see already at high speed
a system of seemingly receding events

while to see
what did god do originally
we need to have spiritual vision and a more developed one

i.e. the system of the following events
is increasing at a rapid rate
i.e. if, for example, the Universe is expanding there
and at the same time the structure of God
it is precisely located at a distance of only Spiritual vision
i.e. as if always at the same distance
from a personal point of view
physical body of a person
and for example the same vision as God does

after all, viewing is Spiritual viewing ^{yes}
when God looks by Spirit
He looks at the same level all the time.
i.e. the spiritual distance is the same

for example, take some element of Reality
and even in personality the distance is the same

Spiritual vision of God

the same as a human by the way
by the level of perception ^{or something}
Primary Level of Perception

but when God starts to consider further
structure of general development
then it turns out that it simply exists
to the level of primary creation

while a person
it operates at the level of investigative systems
he may strive to see the point
before the primary creation of its matter there ^{yes}

but at the same time he can do it speculatively
while God makes it real all the time

and so a person can transfer the speculative state
well, there 's something logical there
Well as if such a certain state
into the structure of Infinite Action

he must consider it then
in general well, the speed of development of information about the situation

and it turns out that then

to get balanced control
a person must be able to in the current time
have super speed yes in interaction

then to have this super speed
a person must actually consider
how does it interact
Here is the structure of his Thinking for example Yes
with the whole Infinite Environment

and as soon as he finds such a point
then he has super speed
i.e. from the fact that he simply cognizes Reality
he finds this point of super speed

and can use it
there in order to, for example , heal someone there
there, if necessary, he can heal himself
or manage events there, etc.

and that's when we start making management like this
that we well even given the condition that there
the person is completely healthy yes

and he still has to create a structure
physical matter, well, precisely in a healthy state
it just simplifies his task

while if a person has some problems
he must then strengthen management
due to the fact that the system is fixed
Well, there is no such process as a physical body
in management

This is the level that allows
clearly track what we essentially have
in general, the following design in management

that when we consider
well, a standardized system
there the connections are simplified and shortened

and if it is not standardized
there are some problems with it
maybe just situational
that need to be resolved

then it seems as if a certain road to action is extended
i.e. the action first goes through problem solving

it turns out that in the Infinite level of development
we have a level all the time
that from Infinity comes the element of standardization there

i.e. in Infinity, just the same
there is also the Action of God
not only there now locally
or was there somewhere in the past

namely in Infinity
we have it all the time
more optimal level of development, perhaps?

and that's when we start to analyze
in Infinity
what does the level look like for example Actions from God

it turns out that this is a formation, let's say
of Infinity itself in the Perception of people
this is God's participation in people's lives
but it is in that life there in Infinity
i.e. Infinity in information already exists

when we start to see from there
these signals that come here we
we see that the construction of life
it is there and for example there is your personal will yes
in the future development, so to speak, building life

and at the same time the will that passes
through the Action of God
from Infinity to the present time
where God has already organized the next life

after all, by analogy one can say so
that since life already exists now
then by analogy to previous processes
it is the same thing in a certain sense
Infinite magnitude of interaction
at the level of well or comparable or generalized forms

because if the past is infinite
then the current time is also Infinite

and that's why it turns out
that when we act from the physical body so to speak Yes
or the actions of the physical body as such
not in terms of some kind of everyday action
namely the informative action on Macrosalvation
but it is the information of the body itself that is used

there are factors taken into account here
past tense future tense to present tense
and it is precisely the allocation of the current time
for example, there are comparisons of this type
what happens at the same time
and body organization and action

here this situation helps to see
that any action
is actually organized at the point of its existence

i.e. any action seems to grow
at the point where it should be done

it doesn't really come from anywhere
from some specific source for example Yes
and it exists precisely in the structure of the Universe
so this is where this action takes place
as if it were growing , as if crystals were growing

it turns out that here is how to get to this action

and perform management
in fact, you need to be able to know this
Laws of development of action
at a specific point
or in a specific situation

and to understand
how do any laws exist at all
in a specific situation even

then we need to at least roughly understand
in that, as if on a unified level
understand the system of events that occur

i.e. we must try to see a certain Law of development
in any system of actions there can sometimes be a chaotic

and here is the next level of action of the physical body
this is the ability to systematically present any information
to you

i.e. to your physical body
or there is an information level of Perception
to your Soul

and the ability to transform information in this way
what we get in action
already coming from the physical body
in general, the action is comparable , or something like that

and the organization of the World comes from that
what we found
where the structure of action grows
got the opposite effect
counter action
and got the same effect
but at another point

why is the world, for example, wide and spatial
and is not located at one point

because that's how I explained it here
any action is primary
which gives birth to the following
as automatism of a certain situation as a certain Law
necessarily leads to an expansion of space

because it's the same action
The action of God and the action of man
well which should be comparable

or exactly the same there
already forces us to build a space of a different type yes
which contains at least two identical actions

when did man learn
he can, in principle, do the same as God did
and he can teach someone else

so that means they might be there
there are three identical actions, etc.
or there are millions

and it turns out
when there are more identical actions

match

i.e. people try to develop more and more intensively
at the level that God shows

then it turns out that we have
collective management of the whole Reality
where the Actions of God from the Physical Body are involved, moreover
including

and then we begin to see
here is the basic structure of this control
that socialized management here
i.e. everyone collects their physical bodies ^{yes}
as if well, your physical body or there I say mine

what is meant
as if a discrete phase of manifestation of the physical body
in management

then it turns out that we see here
very unique level , I think
when collective action
it is still a multiplication of action there
by local systems

i.e. each person increases his system
and sees how in collective action
this is precisely the concept that manifests itself
For example there is "organization of the physical body"
investigative action
next action

and here we see such a process
that when we our own body
we collect

then the information spreads
on other bodies almost instantly

i.e. here is the phase of information in this management
it is practically according to some objective Laws
as soon as we start studying
namely, by collecting, as it were, the body
from information from external Reality

instantly this information spreads
into all other physical bodies

i.e. there is contact in the control or something
not even informative
and in terms of transmitting information about Eternal development, first of all
because who did it right
he starts to transmit more
the structure of Eternal development

and in many cases managers
who are simply engaged in Macrosalvation
always convey precisely the Eternal development
in management
i.e. when they are engaged in logical yes
some level of Macrosalvation

it turns out that then in this case
if we start to analyze
how can we say it there
well, in a practical, pragmatic way
use this knowledge
by the action of the physical body
in order for example well, to solve some problems
according to a person's health according to his life

it turns out that it is completely clearly visible here
what in this case when we apply this technology
the physical body looks like
as a system, well , on the one hand, there are light levels, yes
some connections of light and space

but in essence it looks like
as an absolutely monolithic system of the physical level

this is where we come to that
what exactly is the physical level
is a kind of monolith in action

although with all this we have
some kind of branching
even greater than in normal processes
or what about management?

when the action is directed
on many aspects of information
then it turns out that even in action it is not a monolith

or some kind of multi-level management plan ?
human physical body

i.e. on the one hand, monolithicity
if we perceive the physical body
from external information
in relation to oneself

and on the other hand there is this return signal
it gives an infinite number of connections of the physical body

and here we can determine
the entire structure of its own development
in terms of, for example, the primary level

that's why, for example , at some point
some specific person
had exactly such and such a level of development
for example, there is intrauterine

why did the pregnancy develop like that there yes
at his mother's
this person's mother, etc.

and it turns out that when we start
analyze this, well , this kind of thing
deep component in action
it turns out that we can consider
the whole system of cause and effect relationships

and the action of the physical body then spreads
on the action itself, actually
at the moment of previous development

and then we can use
here is this famous experience for that
to extrapolate to the next level
Well as if actually the actions of the same body

i.e. the current time should be a guarantee of that
that since there are some events of the past

and in the current time certain situations are defined
in relation to the physical body

then if there are problems, they must be solved
and this must be guaranteed

from the current time

if not then they should be as widespread
the necessary systems there knowledge for example Yes
for a specific person

and it turns out that when we consider
current time
as a kind of guarantor of control over the general situation
there for past processes for future ones for current ones

then here is precisely the action of the physical body
can be considered
as a system of interconnection of the physical body
and the Soul of a person, for example

i.e. it is clear that at this level
The human soul and the physical body
do not differ in the level of action
here the unification of the Soul and the body occurs yes

if we want to understand where this is happening
it is precisely at this point that this unification is clearly visible

and when we look at the level
which in this case is always guaranteed
Eternal development of man

then it turns out that we have
it's not just the unification of the Soul and the body, for example Yes
and we can see
that all Infinite events are under control
at the level of the initial point of this unification

for example how God built the World at the starting point
He made the management
and everything else is like an investigative system
developed often, so to speak
and it turned out that nevertheless
we come to the initial level to the initial impulse

and this is absolute stability
i.e. the initial impulse
this is the maximum form of stability

in management

when we start in this technology
move on to that
that we are starting to consider this form yes
to implement
in terms of Infinite action

then it turns out that the selection
this is the initial status
this is actually already logical
organization of the entire subsequent development system

i.e. the entire program of future development
it turns out in this aspect
it should be revealed quite clearly
i.e. in full measure yes let's say so

because the initial impulse
contains naturally
the entire system of the next development
somewhere this system is located

when we start to identify the system
even before the initial impulse
we begin to perceive future information
as a system of some kind of Macromanagement

that we can influence the Macrosystem
at high speed
and at the same time receive some events
often, for example, do not consider that the influence occurred

i.e. the entire external big World that exists
and external action for example
aimed at, as it were, even specific tasks
often goes through a feeling
some large space
even at the level of sensations

it turns out that when we see
this is action yes
at the level of, let's say, a large space

impulse coming back to you

then it turns out that the entire space is being formed
this is primary, well, some kind of development , yes
promoting your personal initiative

into the structure of spatial systems
in the structure of the next action there

and identification for this action
just a certain platform of that very thing
which, for example, is actually a platform
Well so let's say Infinite development

then it turns out that for that
so that your specific option
realized in management
you need to put events as if on some platform
which is located between the structure of the future
as if and of the past yes

but at the same time it is located
in general, not in the current time there directly
i.e. the current time only intersects perhaps
this system

and now we have come to the management level
where time is well as if not the main aspect of the actions

then it turns out that we have this control
achieve it on time
tasks in management

but we still do the management
in the structure there is still a lack of time

because even if you look at it logically
to the primary level of organization of the World
there was no element of interaction there
between events yes
that means there was no time element

and from this it turns out that as soon as we
we bring the control here
then this is precisely the action of the physical body
it is considered exactly like this here
that the process of formation itself
this is some kind of infinite quantity
which is perceived by the body itself
by the body itself

here is the Perception of the body itself

this is a specific area of Perception
where the body perceives information directly, so to speak Yes

and at the level of this action
when we deal with Infinite quantities
absolutely clear
that man has one unique system in action
one point and one area where it is located

and here is the selection of this area
occurs at the interaction level
specifically with Infinite systems

where exactly are the Infinite Systems
from the current time, as if they are pouring out
in the information space
into the space of the past future

and it turns out that he is actually a person, as it were
at the information level
Well, you could say it's like it's going down
to the level of the developing world
in front of him

and it is already his task to choose in this World
some kind of system, well, actions
some kind of management structure

and it turns out that on the one hand
The world seems to exist in the control of yes
i.e. it exists
at the level of some developing events

and on the other hand you are constantly choosing
and management occurs because
what are you sampling from there
the systems you need most

and it turns out that then we have
in general the next factor
that the World which is somewhere out there in Infinity is developing
and you by selecting the right solutions
or what you need
you start to influence this structure yes
Infinite future

then it's clear why God
doing some private actions and private decisions
affects the entire structure of the Universe
because at this point of influence
can you do this

Well for example , a person can do it once
God can, for example, in one impulse
make management all over the world

and it turns out that it is precisely the intersection
as if in the event area
this is sort of a spectrum of events
where there is influence, both God and man are equal
from the point of view of local or territorial
or there is a vector impulse

we are starting to find
some generalized point of influence
on the physical body
and on events in general

that at the same time when we build
physical body yes
or another person there
or simply form the information of this body
parallel to your body
and at the same time the Action of God
these are often socialized systems
where exactly the signal is distributed, like this

the signal coming in the Action of God is one signal
a signal going to some kind of platform or something
in human action it is a different signal

and here we see
what is the distribution of this signal
from external quantity
where is the Action of God
where is human action
This is a special technology
what was I talking about
what if we consider an external signal
and we will start distributing it as a system, let's assume
well, there was practically no integrated action at first

then as soon as we start to highlight
where is God's Action
and where is human action?
then we are in human action
we see our own action

i.e. we see ourselves as we work
now we are starting to see the whole spectrum
of his own work

connection of their actions
with the Infinite Future system for example
connection let's assume with the system well let's say so
some kind of Infinite past development

and then it turns out that we start
already considered in detail
your own development
in the structure of there event systems

and then we understand how to determine through events
the following relationships

i.e. it can be absolutely clear to us here
what needs to be done
because we see ourselves as if from the outside clearly
and we see our next steps

and now if we consider
and this is, in general, the principle of developing controlling clairvoyance
Let's consider the following action
as an action that comes, for example, from control over oneself

i.e. you control
you see the next action
then the formation of a physical case
and actions from the physical body
this is a completely clear and stable position
in future events
then you need to be able to see very clearly
future events yes in relation to yourself

i.e. the ability to see oneself in the structure of future events
even if it's just for a short time

then it turns out that you are at the level of some action
Well, it even looks like an optical one

some kind of mechanical action
you push yourself with an optical beam
in Infinite development into the future
and then it is clear that it depends on you

took ourselves into the future and pushed through
how simple it was made as a control element
saw themselves as a control element
and carried the events forward

then it turns out that you are absolutely protected
in this regard, when you know how to do it

to conduct oneself in the structure of information
into the structure of future events

and when you look from the outside like this
then the action of the physical body is obtained
some kind of dual ^{yes}
on the one hand, you act independently
i.e. you work with information ^{and} from the physical body

on the other hand you work with the physical body itself
ensuring his favorable development there in the future

and it turns out that the impulse comes from you
but it hits you but in the future ^{yes}

then it turns out that as soon as we get to this point
we are approaching in the future
external control level
this is your level

what I was talking about
that the whole system turns out to be external
can be seen in earlier impulses

i.e. what was originally done around you
because any impulse has a ^{tendency}
to some kind of integrated development

i.e. either the impulse was someone's there
from some endless past
and we can make a sample from these impulses
and get that in the current time ^{for example Yes}
we get it already quite clearly
what was highlighted by you in the earlier management

i.e. you get a motive of sorts of personal will
in management

that's when you start to consider
this motive is objective
it is the same as all other control systems

then it turns out that you are entering the area of Infinite development
at the level of just ordinary
there are creative possibilities and abilities
at the level of just a task and goal

so you entered the structure of such management
having looked at myself and ahead

actually sending a signal to itself according to logic

and as soon as you send a signal to yourself
then it turns out that you immediately enter the phase of Eternal development

and by analogy with what you have
the same physical body as everyone else, yes
by form and structure of management
exactly as if in a physical sense, so to speak Yes
to a greater extent

then it turns out that we have
universal control system
from the fact that you own your own system, so to speak
management actions
and at the same time your own system of action
this is what comes from you for example Yes
at the level there
Souls
Spirit
Consciousness
and what you can additionally master
in the form of some kind of training systems

i.e. the training system in this case
this is a spectrum
where the external system intersects with the internal

i.e. you are moving into the internal management structure
in this case
as soon as you move into the learning structure

or knowledge of the next knowledge

then it turns out that you
having for example the structure of action as such yes
so let's say inside ourselves
as a system of some kind of training
and a person always knows about himself there
certain information yes
can always tell about itself certain systems
including prognostic systems
in the development of a specific person

it turns out that although predictive systems
are often based on some known factors
nevertheless it works out
that interaction at the human level yes
with a person on information
when else does external information pass

in management
as information in general is also a previous action

and this information gets through
already as an investigative quantity
then a person sees that the entire information system
it's as if it's permeated
by his personal action and presence
in management

i.e. he begins to see it
Well as if factually or something
at the level of tracking the connections of specific
i.e. he comes to the primary point of actual creation
but in the investigative version

similar point arose
which exists as the primary point of creation in general yes
in the absolute sense

but when in the next development
point of creation of some events yes

then it is possible through this investigative point
influence the main system of creation yes
to the primary system of connections itself

and it turns out that when we begin to see

this system of interaction
i.e. we consider interaction
local system and global system
then we see that for a person
it is easiest to master this system or to do the management
through solving some specific problems

that's why i often say
that it is desirable to solve problems all the time
through Macrosalvation
or there initially implying Macrosalvation

then it turns out that you are constantly working
in the field of information integration

those. your action
this is a certain indicator related to that
what did you do and how did you master it correctly
event structure

for example, why did God have to create
some events
but in this case it is clear
what exactly is the action
this is a certain level of tuning into events ^{yes}
i.e. you are acting correctly
or you think that something needs to be improved, etc.

then it turns out that when you start
^{how to} distribute control
to the level of some kind of Infinite forms
it is still an element of your criteria level
is the level of action of your personal action

so when a person is absolutely free
in action
it turns out that ^{it is} his personal action
This is a frequently found value
from the point of view that the standard level is for others
forms its own action

i.e. he first considers
all external aspects of managing other people
and therefore even at the level of the Soul it is considered

and therefore forms some next action
i.e. the next action

always connected with all communication systems
in this world

and here is the interaction
between the next as if action and the current action yes
or there between the past action
This is the level that allows
on some kind of control plane
get such a context of action
that you begin to see the action as already universal

i.e. any action is a universal value
i.e. you are already coming to knowledge
to this aspect of Reality

that's when you come to this aspect
that any system is a universal value
then at this level it becomes very easy to work
with a system of information transmission, yes

because it is a universal quantity
has certain identical properties
then you can take some kind of signal
which corresponds to the given value

and extend it, for example, to the physical body
there is a certain level of optics and man

but since they are identical, you don't have to pull anything
and in this place take a similar element or exactly the same
and transmit information

i.e. taking into account that in each element of information
there is always any other element of information

then it turns out that the presence of God
That's exactly what it is
what a person then begins to differentiate
by personality traits
not by the sign there for example actions
from the level of some element of information
and on a personal basis

example, when you do management
then a quick transition from action to management for example
according to information
to the sign of personal action

i.e. revealing one's own personality
often allows you to act almost quickly and immediately

i.e. a person, for example, can work
at the level of some ordinary information systems
and then when he needs to move on
for example to quick control
he can only pass through the action of his own personality

do not work, for example, with abstract quantities
but just consider
how does your personality interact with this World ?

and then it turns out
that is where the element arises
basically nothing like that well, strong enough, so to speak
status management plan or something
where do you start to see
well, that's the information after all
which is related to your personality
this is still information that was concluded yes
for example, at the primary level, as it were
in the primary management plan

and it turns out that you work from your own personality
almost at the level of the earlier management system

i.e. personality is the primary value
so it turns out you work
with a large, optical lever

personality that originally emerged
he you when you work from the personality
you rely on
to the primary factor of creation of the physical body
or there physical matter

it turns out that when you start working
Well as if factored
focusing only on one's personality
and not working at all yes

then we see the intersection that the action of the physical body
it still differs depending on
namely actions on information
how do we view the process initially yes

i.e. we can consider the process like this
what works for example
only physical body
there is an Infinite Future in effect
or operates integrated
some process of personality yes yours

it turns out that when you consider
still the structure of personality
then we can find some kind of primary system
some kind of quintessence, so to speak yes in action
in some action
prehistory of actions

and when we start to consider
this value
then it turns out that it is a personal factor
here are the actions of the physical body
it is still a factor
which originally occurs
from the Infinite Phase of Development

and we choose the system that promotes
for example, there is the Eternal Development of Man

i.e. there is a choice all the time
even at the level of the primary level of formation
for example, actions of the physical body

i.e. where we begin to consider, for example,
point of primary formation
point for example of the next action

but to be absolutely clear
it is pragmatic to apply this control there
can you make such simple controls now?

set the scope of tasks there
all existing tasks
and act simply on an optical level
as if acting from the physical body
and act from a personal point of view
of his own personality at the same time yes

Here is the concept of "action" from the point of view

namely personal information
this information that may be located
basically anywhere
it doesn't have to be located
only there in the physical body ^{yes}
or there in the area of the physical body

here is the action from the physical body
after all, it's the area of the physical body, ^{yes}
you perform the action on your own

and here is the action
at the level of information systems
personality systems
it is very often powerful there sudden information
which acts on events
and therefore it turns out that we can
combining , for example, the action of the physical body there
action, for example, of a person's personality

where does it come in
and the Soul of man
and the Spirit
and Consciousness
although the physical body is the same

but when we talk about personality ^{yes}
we ^{kind of} translate the information
into the structure of any Infinite system

personality is infinite
it is not specific there, it is only a physical quantity
and therefore the action from here becomes

stronger more effective

and then we get that the action of the physical body
or there is the formation of the action of the physical body
implies the presence of many aspects
as if even the relationship of a person to an action

i.e. either it is being considered
some kind of physical quantity, some specific one
or we start to consider
another informative value
such as personality

and then we see
that in total when we act from multiple angles
then in principle we act
just as God does

God is at work
on one particular area
An infinite number of ^{options}
it turns out from a human point of view

He is the Creator of all Eternal development.
so it turns out in his personal one action
there really are a lot of elements going on
Well or what? as if external multi-angle control

we can distinguish a linear system of God's Action
but there you have to see your own personality again

and when do we start
it is precisely in the information that one can see
i.e. the unambiguous Action of God
when considering one's own personality

but then you should know
how your personality interacts
there precisely with the Infinite level of information development

then it turns out that you are highlighting again
personality from itself as if ^{yes} from your system of actions

not because God saw it
there your personality structure at an earlier time

because you can modify the controls
and present the management structure
personality of one's own ^{yes}

at the level of the next task
i.e. God already sees your initiative

then it turns out
at the level of, ^{as it were}, the docking of this action
when God is already considering your initiative
we can see quite clearly and distinctly
that all systems of action
which exist in humans
at the level of wish fulfillment

at the level of some questions, ^{yes} or there are solutions to questions

we can see
that there are deeper ones, let's say
levels of organization of the physical body
creation of the physical body
which simply depend
from the ability to organize the physical body
in the structure of ordinary Thinking of any thought

this is when we find this level of control
that from any thought
it is possible to organize the physical body

then in principle the system is simplified
no further management ^{there}
i.e. in Eternal development this is a very useful characteristic
from any thought there any information
the ability to organize the physical body

i.e. starting from any level of Perception
receive the formation of one's own physical body
in the conditions of Infinite development

i.e. it's not easy to get a body there
namely, due to the local impulse of the light pulse
receive Infinite development
from the level of one signal
which falls on the physical body
we get the Infinite Development Factor

i.e. the body actually works in this case
as a level that creates information of the future ^{yes}
for myself
as soon as it receives ^{a kind of} local burst of information

and when do we start
this system is practically implemented ⁱⁿ management
then it turns out that God did it that way

local primary burst of information
brought to the structure of Infinite development

same here
we must be able to translate any local surge
into the Infinite System

i.e. how the local physical body of a person is constructed
why is it local and autonomous at all ?

because it is translation
some kind of management conversion
is happening
precisely through the completed form of the physical body

and that's when you follow this level
that the impulse is external
passing through the body
forms the Infinite System
then everything you have is stable and you live forever

it is precisely a clear vision of this situation
ability to manage this situation

because in the future, just the same
this whole platform of Infinite Development
this is the level that allows
well, actually it means to consider analytics or something
well, according to the subject of its existence

i.e. the future exists on the basis of what at all
does this information even exist ? For example

you can see it here
this connection is precisely due to projection
which arises
from the refraction of light through the physical body

where is the physical body
this is already, generally speaking, a constructed value
i.e. it exists before the fact of construction, even often

and this is the system that shines
into the Infinite System of Connections

and the earlier the system of connections ^{yes}
the more stable the control becomes
then output control
on the subject of control, for example, from one's own Soul

it's just a matter of finding
time interval of this type
that this is the time that you were approaching
to the structure of the physical body

or there to the structure of the Soul

then this control
it actually hits you
and very clear right here
methodological principle of management

how long have you been approaching
for example milliseconds yes to yourself
from any point of information

stands out very simply
like an information clot, some kind of glow
this glow must pass through the physical body
i.e. it is possible to do it by an effort of will

and the main thing is that the output hits
to the Infinite Control System
i.e. it is necessary to put it so that the future
the line of control was just Infinite

once you achieve such control
that action of the physical body
is precisely and at the same time
and an element of Perception , yes
and the next action element
and an element of Infinite development

then it turns out that you are short-circuiting the system
only on myself
and then the action of the physical body
This is your personal management system.

then it happens exactly
and you can decide
virtually any level of management
precisely due to their personal capabilities
and this will be an Infinite level of control

This is where I end today's seminar.

Thank you very much for your attention
