

GRIGORY GRABOVOY
The Teaching about God
Formation of the fabric of information
19.07.2005

Hello again
the topic of my seminar today
This is my Teaching about God
Formation of the fabric of information

in this topic i show
how to form the fabric itself
what does information consist of

pragmatic or practical action
of this method
in that we can determine
as a goal coming from oneself
for example, a person's goal is not defined, yes
or he is in a situation
when, for example, he doesn't know what decision to make

these could be some extreme situations
and a lot of parameters
or is he in a difficult state yes For example

and then it turns out that since the state itself
can be implemented for a number of reasons
he needs to make some decision

and first of all
then the reference level of control
for example, as God does
the original level of God's creation
and then all the action happens

i.e. the reference level is always the person himself
i.e. as if it were a supporting management plan
at this level is the person himself
which actually develops from itself
some kind of light control

and this management forms the goal

i.e. the primary goal

this is an unconditional action of the person himself
and the next control point

i.e. he must perceive
some point in the future
a light point

and it turns out that then the fabric of the information itself
is being formed
as an action of the human physical body
and an unconditional action

i.e. it is clear that the physical body must develop
in the ideology of Eternal development, for example , Eternally

and then it turns out
what exactly is the movement of the physical body
in the informative World
forms its primary purpose

i.e. the goal is there in itself
in the physical body itself

a person basically just needs to defend himself
these positions yes

and this is where it is formed
next thought in management
i.e. the thought is realized
when a person has already undertaken something
primary action
the action of forming this type of information

and the primary tissue is already formed
as if from the point of view of even future processes

i.e. here it turns out that there is a simultaneous connection
at the level of Consciousness
current time processes
and future tense processes

for example in the treatment of diseases
various, moreover
and the most rapidly flowing ones, for example, etc.
simultaneity of the connection between the future and the present time
this is a serious enough amount to cure

and by the way, for the cure of any disease

This is where it is very important to see
that there is a very serious resource here
so that a person with any disease

possible so to speak, it is not necessary that it started
this person has some kind of disease

that he always crosses a certain threshold

because the connection
vectors of future events and current time
where in the future there is just a task for example yes Eternal development
allows you to constantly pull the situation forward
well, it's like a locomotive that keeps pulling
at the expense of future information

and here is the main substrate
formation of the fabric of information
as such information
this is a connection
almost instant connection of all processes
in the goal, generally speaking, of the Infinite development of man

when a person understands this goal
then he kind of calms down and starts to act
from the point of view of some logical processes

and here is the logic, further logic
this is already something that actually has reference points
the goal is precisely Eternal development

i.e. we are talking about just an ordinary person
which for example Well, it is in some different situations

and that's when we look at the process
how to form the structure of the word yes, for example
let's assume the structure of the action

then here, for example, in today's seminar
here is the formation of the structural environment of the word
can be identified as a system that is generally informative
i.e. before the word we see the status
the primary goal of man again

but already given initially by God

that at some point
a person overcomes some system
Means Well, maybe some unfavorable ones
in management

and it turns out that we can see
what is the level that is like a pre-verbal level

and that's when we start
Well how to find intuitively, so to speak, intuitively
i.e. at the level of
that for example through controlling clairvoyance
some impulses are visible
but they are so far away
in the management structure yes
a distant faction of Consciousness
that their meaning is not defined

but for example for a person it can be like this
that some information is very remote
and the signal simply does not come from this information

Well, here is a signal that has been identified and manifested

and here the problem arises
also the formation of tissue information system
and here it is necessary to lay it down very precisely
absolutely favorable information

i.e. move the control forward from yourself
to get a favorable impulse
already reversed

in fact you should be able to
in the structure of the action
create information as you go
some mass of information
some kind of glow

this glow should be like this
that at the time of formation
when it hits the point of Infinite removal
reverse impulse positive

and then you build your own life, it turns out yes

i.e. on the one hand, an absolutely existing life
i.e. Eternal at that
and the movement is a kind of pendulum
at all information levels
your physical body in information

Well, I don't mean some kind of mechanical movement
although this is also meant

namely, on the information it looks like this
that there are a lot of processes in the world

and it turns out that you are constantly moving forward somewhere
i.e. precisely into the future where there is a favorable future

and this is some kind of outside observation
this is a factor of movement from you yes

and accordingly to you
when you any element of information
make it favorable
it's already your control

although in the first case it is also your control of course
but in the first case there are a number of unconditional systems
the physical Reality that has developed there, let's say, yes
these are some internal external processes

and so that a person knows
that he is in any problem
always achieves its primary goals

i.e. what is the primary goal
what is embedded in the human physical body
if a person said it once
that he has some plans there
then he can simply continue to carry them out

then it turns out that no matter what happens
he carries out these plans yes
there is some driving mechanism embedded in that
what did he say earlier

and it turns out that this is the movement
forms a connection almost already
coming from God from man
according to its events and from what the person himself does

namely interaction according to management goals
i.e. the goal must always be achieved

and that's when he begins to clearly differentiate
then it turns out that there is a merger at the information level
as if the formation actually
the first identified block of information

i.e. the fabric itself is finally beginning to have
some kind of rounded , for example, informative, rounded form
precisely at the level of, so to speak, the form of Perception

Well, there are generally different types here

by the way, there can be completely different forms here
in this system of knowledge

because when the goal is not defined
and a person can instantly
or create a goal
or put
I mean the current local target
i.e. what to do now how to beat it back or there
implement some control

this is where the formation is
first block of information
as i said it is important to have an earlier postulate
an earlier conviction so to speak Yes

why the ideological status of for example Eternal Development
he is very important

because in this case
under any combination of events
we almost always have some level
which aligns well let's say current events of a person

i.e. the formation of the fabric of information
we are dealing more with the current time

because it can be formed
in the past or there in the future
and we do this naturally
the only question is
how to feel and how to perceive this fabric, for example

because Perception is what is being done now

and so when you form

Now

and now Perception is happening immediately

this is already working out in principle

that it is a fairly dynamic system

where is involved

and man ^{yes}

and external system

where is the Action of God in Infinite Distance

and then we see that in the Infinite distance

if we consider it discretely

each piece of information

God actually reveals Himself in His own way

i.e. it turns out that a person

you can find a specific element

which corresponds to that

as God showed in the plan of God's Action

in the sense that God went through this path

and in the future and often He passed

for the person himself, some area, for example Yes

and when a person begins to recognize

where God realized

his own ^{move} is working

here comes the moment

what's the difference then

if everything is the same then where is the difference in a person

from what God did

after all, God had to go through the same thing

and it turns out that he should have passed

as a human being

and by the way, the same ^{thing}

if that's the point

if, for example, a person has some kind of soil variant

Well for example, such a picture

a man is walking

and there is some hay grass there
it comes and systems of many relationships occur
and he is the only one there

then God must be exactly the same, that's how it turns out
so that nothing in this world changes

then what's the difference
how to understand that it was God who acted
and not and not a person yes For example

so the difference is that firstly it's in the future
i.e. it is clearly visible that God passed there yes

secondly, God is not obliged to have exactly the same image
because here the possibility is fundamentally important

that God took a step there
a person can also step on the same hay

but then it turns out there is a deeper connection here
maybe if you look deeper
because God doesn't change anything
i.e. It means that it can happen in a special way, yes

where He touches
everything is being restored

i.e. hay turns into grass, yes

and where, for example , He steps
flowing grass and transformed grass
i.e. the tread of God is there
the future that cannot be changed

i.e. like the Ever-Living
from a management point of view, this is actually an Ever-Living System
as if in the information itself even

those. the information itself
which has the image of Eternal Life
and there is grass of any level there
exactly what applies
to the concept of "biological life for example "

and information is already determined by images

i.e. here is a difference
that there is work done by God
we can diagnose this area of information

and based on this then we can
build management
what does a person do then
i.e. the difference is that God's plans and man's plans
they also turn out to be different in time

and considering that a person always accepts
your own decision
it shouldn't be the same thing

but in a deep sense in a deep sense
when nothing in the World changes from this action
it should be at least very close
the tread of God
and then a person must pass by and in fact

and that's when we begin to see this very border
that is very close somewhere, that is their connection, yes

then it is clear that
well the connection between God and man
it is clear that on the principles of absolute practical Norm
there for everyone in general

i.e. there is a Norm for everyone
Health norm
it is absolutely the same for everyone

what is there for God
what is it for a person

although God Himself is the Creator
nevertheless, it is in general conditions

and it turns out that based on management
in principle, this is the only way God can convey
True real knowledge

it turns out that when we start reproducing here
well, some idea there of Infinite development

then it is clear what it means from the management point of view

God acts like a man

for example, setting these vector tasks for yourself
organizing information
which corresponds to the path of man

and here is just the passage of a person
This is the difference that is perceived by God

after all, there may be such a point of view
what a person perceives as
and how does God perceive it?

and it is precisely God who perceives
that a person has gone this way

but if you look at it this way
God stands before man in the future
and He organizes his move

and it turns out that based on this
the gait of man in general
this is the space, let's say, which is already organized by God

i.e. God has nothing new for Himself here
does not acquire knowledge as it turns out yes

although it develops into Infinity
each of its support points
this is already an endless path

the only impulse of God's creation
already Infinite development
God himself

and it turns out that
and by the way all the people then consequently

i.e. God does not increase information
A person increases information through movement
one more difference

although we are not talking about differences
and about finding the technology of similarity it turns out
Here we are analyzing
where they are absolutely identical
and where do they differ at this point of the future course

and when we begin to see in management

Well for example, this concept
as a "religious procession" yes it exists

then it turns out that here

symbolic management yes
change of management structure so to speak
not in terms of a complete replacement
and as if strengthening due to the symbolized level
which means exactly the same level
no symbols at all
this is Reality

and it turns out that this is when it begins
there is already a change in concepts at the level
that means some social logical levels of control

then it turns out to be a transformation
into a system of some ideology
where God gave for example the way
as there personal initiative as knowledge
and the person who maintains this knowledge

here already arises
that there can be completely different people

and God has some specific meaning there Action yes

God can have it there naturally then
from the point of view of this logic it is clear here
Physical Body which does not necessarily have to be
there it is transformed into some other

this is a single Body of just an ordinary person

and then it turns out that the main thing here is ideology
that people can do the same

i.e. people in large numbers
begin to be in the future

here is the next block of information formation
as such
i.e. the primary status of information

all the time information must be received from the future
and from that future where there is the main thing
virtually all people

if something is missing there
then this information is not from there

so therefore based on this
there is also a substructure there
or even sometimes it is
equivalent branched structure
general resurrection for example
full recovery of any information
in general, all over the world

just imagine some kind of fish there
once upon a time there was a place there millions of years ago
and it too must be restored
where it was located, there in the aquatic environment, let's assume Yes

somewhere this process also exists
in management

it generally exists
at a specific point in a super-remote phase
again Consciousness

because access to this point
for example, an infinite amount of information in the World
and a person perceives
some specific amount
where does this Infinite array go, generally speaking, yes

to flow somewhere

and here is this level
this is it, this is the Infinite Point
where is not even the array itself
and where does all the information go?
except for the one that is allocated to a person, for example
at this moment

so it turns out that at some point a person
highlights
some specific amount of information
somehow
and the other part just moves

towards B infinite removal

all points are equal
and by the way they are equidistant
point of infinite removal
is located at almost the same distance
in management
like for example the point is closer

but here the only thing that means is that there is only a difference
in the motion vector

there is a long movement there
here it is instant
closer to what is perceived by a person
is achieved immediately

and the difference in movement
characterizes precisely the processes in the Universe
i.e. what is happening in the World

so the resulting array is this
which is moving somewhere
he doesn't change either
i.e. it doesn't flow

no matter how much he moves
The infinite point is located from it
at the same distance

and therefore the third level of information formation
and generally speaking with the transition to the fourth
this is the immutability of any mobile form

that's why the more intensive and mobile the system is

well, the more dynamically it reacts to the world
the more stable it is
i.e. immutability in terms of stability is obtained

i.e. the system can, for example, have Eternal development
at the same time, it can of course change shape inside
Well for example, a person grows there, yes
but he may have Eternity technology
and at the same time he can live forever

the faster he reacts to Reality

the more accurately he performs these technologies
those. namely the dynamics of movement
this is the selection of the following form of information

and already with the transition, as I said, to the fourth form
where there is a transition to the fifth

i.e. further on the system of transitions begins more and more
from one level to another

you see
what exactly is the discrete level of information formation
for example, a person got into a difficult situation there
he needs to get out of this situation quickly

then he just switches to everything
to the level before the formation of the system
but the task is the Norm of human development

then it turns out he must create all the conditions
to normalize the system faster
i.e. to get the Norm for yourself
get it from somewhere, yes
he must firmly fix it somewhere

and that's when we pass
five levels of formation
where are the fourth and fifth
it's just the dynamics of the development of the previous system
in an infinite number of directions

then it turns out we have the fifth level
well, actually, there are standards
where information comes as if from outside
i.e. all external levels are what comes from outside

and now we form the next block of information
where external means some kind of flow

looks like some kind of glow
like some kind of batch system
transfer of management knowledge
what is external precisely from the point of view of the external system
we have a formation structure
already even the primary status of the word

i.e. we see that the word is taken

if you split the word there by letters
that word is taken from the external system as well
i.e. it ^{kind of} floats out and you can see it there
where part of the word is reflected in the information
where is the full word ^{for example}
where is the discrete value

what can be the replacements of sound forms
in a word
to perform control, etc.

and to maintain the managerial level of the word
i.e. ^{for example,} in the World there are many aspects of information
and we need the word to work , ^{always}
i.e. it retained a stable form there

^{for example} we need the world not to be destroyed
and we will achieve this in any case
so it turns out that this information is somewhere

stable form exists
By the way, it is everywhere in every person
but it is also external information
that's why this is an absolute forecast
he will not destroy the world
but we still have to take into account the logical version

still have to do it this way
so that it doesn't even make sense logically
or there is information, etc.

and this is the level we get
some kind of packaged ^{knowledge} systems
looks like ^{well in general well,} such parallelepipeds
^{well,} a little smoothed out
not rigid, not even round
they start moving towards the person
not big

it is very important there
their size is actually microscopic

i.e. the carriers of external information are very small
i.e. the greater volume of information is in the person himself
what comes from a person
and the external system is very small
except for the Action of God of course

i.e. and it turns out
what is the next level
equalization of systems
so that the control system is always behind the person
Eternally living, by the way

i.e. as soon as you start to align
external information system
then it turns out that you start to have
more ^{yes} to yourself the effect of this system

which means you need to align it
at the level of the same action

then it turns out that you should see here
how is it formed
^{for example} the word
action
and how each process is formed
at the level of Perception

i.e. try to watch from the outside
what's going on in information

Moreover, you also need to be able to
determine your next steps
i.e., actually take full control of your actions
and then the next one arises
actually the seventh block
with the transition through the sixth level of control

where is the sixth level
it's more like a platform of disposable elements

and this level is somehow not manifested, ^{for example}
in the form of a stable value

i.e. the seventh level
it already provides a system of absolute stability

i.e. the system begins to develop
^{well} moving from one level
from one ^{step} to another

comes to a system of absolute stability
where the formation of the word can be any

the formation of the action is also any

you can form any word

there for example using some level

Well for example, the action of information

glow on the word itself

you can save the word, you can change it

there, how can I say it, maybe not even in a different case

and somehow try not to form

from a management point of view

well, some definitions of the word

i.e. the word must exist

without formation there may not even be a structure as such

so that in the collective Consciousness

there were no recorded forms

what is this case in management

or is it just a word as such

i.e. the word as an absolute value

and that's when you come to this word

which has no declensions there, etc.

it means that the information shows that this is a word

but you don't get any information about it as such

i.e. a word that contains

well, practically it can contain

all phenomena of Reality

then you come to that

what comes from here

very powerful main reflection in management

i.e. at this moment you are forced

to form Reality independently

make decisions

assign some sound forms

and make the management such

to mean Well, you can practically help others there, yes

yourself in control

it turns out quite intensively

if you have time to form

the desired system

which firstly means in verbal
or there in the control expression
controlled by you quite preferably correctly
or better yet, absolutely precisely

and at the same time is perceived by others in exactly the same way
Well, people have a communication system
such as, let 's just say it like that
communicative such a management plan
where the break occurs in the middle of the word sound

i.e. for example, here is "community" and then "i" is a long letter yes
as if in sound
here is the length of the letter even
letter has length in this control
those. the form is directly visible

how to calculate the length of a letter
in a discontinuous form of management
at the pre-verbal level

i.e. the closer the word touches
with the original meaning where the word is not there yet
the more the discontinuous function goes
then capacity matters
we are moving to form

instead of a meaningful expression
we go to the form

and it turns out that we are already forming there
in fact, their own events in their entirety
as if in control fullness

i.e. the more precisely we work with the word
the more accurately we work with our information
in general with all

there might be some kind of cure there
there may be management etc.

and instant control
counter control we need for example Yes

and here is the selection of the form by sound
where is there an interruption in the sound form

for example and what does a long one look like
and how is this fragment located

when do we start to perceive it this way
then we don't need the word itself
the action of the form is enough for us

and now the gradual transition begins
to the structure of the control impulse
where we have actually

Well as if absolutely complete Reality

i.e. we are absolutely clear and completely confident here
that we control everything

i.e. if we enter into the formation of information
where in general
there is no information at all, just none
but we are sure that we have been there at least once

that's confidence itself
gives, generally speaking, a complete picture of stability
in human development

for example, there is the concept of "sustainable development of the system"
is there generally a similar concept ?
for a person, this level can also be considered

and it turns out that we have answers to every question
although later ^{yes} the answers given are more broadly
so that the collective action is clear

and it is clear that in collective management
when a person is in this

Well as if to the verbal level of control or something

i.e., he actually makes the decision for himself
in all aspects

i.e. it determines in all aspects
your own development

and this confidence
she returns to him already in the current time
at the moment there may be a difficult state of the person

and then a person begins to see

that he is confident in his actions
and confidence is based
on some earlier thoughts yes

one positive thought is enough
so that any complex of the negative system
disperse

for example , there God means one day at some point
it turns out that having created yourself once
He dispelled all unfavorable situations
in Infinite Time

This means that such a mechanism exists somewhere in humans

and it turns out that based on this
if we study this mechanism deeper
and try to understand
how does it interact
this mechanism or this technology
with a person

then it is clear that the formation of information
it is also a mutual technology
i.e. the image is formed
from the point of view of external control

and the perceived image
Firstly, this is a different type of images

how another quantity perceives
your own action yes

Well for example , the wind can affect the leaves there
sways the leaves
This can be said for sure
and you can form the word "the leaves are shaking"

can be ignored altogether
there is wind
it's clear that it acts on something there, moves it, yes

but that doesn't mean that these are leaves
although you may know
what do you think about leaves

i.e. thinking about means to perceive thought

without formalizing it as if it were strictly distinct

ability to work in the field
where Thinking is still being created
it hasn't been formed yet

and when you start working in this area
although it is possible if you look at it from the outside
and it's the first time I've heard such control
then it's kind of difficult , yes
how can you form something that seems difficult

in fact, any values
which stand before the fixed elements
they still have it
certain systems of diverse connections

for example, a clearly formed thought
positive development
it's always good it's clear everything is going well

and if the system is not formed
then it turns out that more is needed here
necessarily a prognostic phase
see
to know for sure that you are moving correctly

i.e. the ability to see distant prognostics
Endless prognostication

and here is the next status of the actual formation of information
tenth for example status
i.e. you can go through 8 9
through the eight as the status of Infinity

nine is already an integrated generalized status
where does well go like a change in the shape of a figure eight
you can even calculate it that way

where Infinity is derived
through the action of the symbol
also into some kind of Infinite quantity
but already through symbolic understanding

i.e. 8 real level
can be considered as the level of Infinity
if 8 is placed in the symbol simply horizontally

and nine, ^{well} , that's a stretch
consider that it is an eight without some piece there
fabrics ^{and} information
^{well}, aligned of course, etc.
as if located in a peculiar way

it turns out that we can only use numbers
sorting through numbers
complementing increasing
find interesting enough
^{well}, some grain of information

that you are already moving on
on the logical model of Thinking

i.e. by creating a precedent or by making control there
at the near-informational phase
what is shown by words is meant

you are moving to the logical phase
but logic is already hard information
and you see
how the logic of Thinking can be created by you

i.e. you can see
how to create your own logic of thinking

i.e. how to create any thought of your own
how to assemble light levels
how in the conditions of precisely the knowledge of Eternal development
you can these light levels
actually bring it out on oneself
and it turns out to create your own Reality
in full, almost full

i.e. it means you can clearly understand
that at the moment of such action
You know
that you have a good prognosis for development
since you manage to do such things

and in the conditions of action, ^{for example}
it is very useful to have a good prognosis

as a rule, this is a very important value
sometimes it makes things much easier

sometimes she often generally defines
some actions even

and it turns out that on the one hand the forecast is fulfilled
on the other hand you overcome control

then next level
identifying the status of information
from the point of view of that
what information would you like to disseminate

i.e. the status must be revealed
so to speak, through some elements of interaction
any element of information of the Infinite Environment

and here is this revelation
this is a level that allows at some point
at some point
come to that
that the information is not defined at all

i.e. we begin to develop the logical phase
logic is sustainable development
and at some point we see
what does it mean that the identified phase has that
what is information as such
in general, well, it feels like there is no information there
which has some kind of finished expression
just a feeling of course

really any information
this is information
if there is no information
i.e. there is no radiation and no information, no certainty
so this is also information, it came from somewhere

and it turns out that based on this
can be calculated
Where did it come from anyway?
where are these interested parties
which this information
Well, actually they do implement it, yes

i.e., find, for example, specific people there, etc.
and try to further determine the movement

here by the way in indefinite forms of information
you can always find it behind this
a specific person a specific personality

and it turns out that based on this
we can see very clearly
what we are able to
so having looked at some personality
and the personality can be neutral
there it could be a person riding the subway
there is somewhere there

that's what's interesting about neutral forms
and the action of the individual is neutral
in relation to you and the form of information

and if so, then it works out
which is the same as what God does

It acts equally on everyone.
then you see the manifestation of God
in a certain action

and this manifestation is like this
that the logical phase is very developed there
as if the spectrum of collective Consciousness of people is very developed

means the selection of the fabric of information
and the formation of this tissue
It is important to highlight
areas where the concentration is highest
collective consciousness
for some one process, for example

and based on this we can clearly say
what is the status of temporary action for example
there is a temporary action

and temporary it can be current at the moment
further improvements and management

and here is where the magnitude of the action is revealed
i.e. the ability to recognize the criterion of information
the ability to present this information
in the form of some kind of process logic
this is often an internal autonomous action of a person
determined only by its internal tasks

i.e. the entire external control system
he takes it upon himself
and already while he is bringing her to himself
only then does he realize the meaning of this system

i.e. it turns out that ^{well,} from the point of view of logic
he has to formalize
enough for such a person
large control arrays
where is the external control ^{in general}
this is a status that is often used
for specific ^{situations} for specific states

and it turns out that based on this
the person takes complete control
fully implements
there is a way out of some situation, ^{for example} , unfavorable

and the next formation status
this is when the autonomous level of a person is there ^{for example}

or human action
forms practically
thus control over the situation
what can you do because of what's there
^{for example,} not some ordinary image emerged , maybe
maybe on the contrary this image is clear
but you need to overcome it

then this is precisely the formation
at this level of a completely stable system
this is the main question, generally speaking, in management

when all external systems
moving to your autonomous level
become completely under your control

and these processes are obtained
you can take it ^{as if Well let's say this} once

Well, that's how God did it
He made the management ^{so to speak} Yes
the creation of the world happened
once or there many times
this process was then dispersed
there in the Infinite phase of information

but he still controls the processes
and all external processes
are still controlled

A person should have one
a completely similar mechanism
even if it is perceived differently at the initial level
that this can affect the sounds

when you work with this area
the word is not formatted there
so you can work like this
that you can even see while working
how sounds change

and based on this
it turns out that when you work with this area
This is roughly how you manage things

the closer to the starting area you work
the more precise the control is, well like this type
that's who well for example, it doesn't contribute there
or who ever interfered with some kind of management there

although maybe it wasn't noticeable, etc., i.e.

i.e. levels begin to appear
which actually
maybe it's not even a person as such
and some kind of physical environment
there is natural background radiation, etc.

some external information rays

and so you begin to see
that this is this transition
from the outer region of formation
of your own status yes
as you see it
formation of the structure of Thinking so to speak
at the level of logic of thinking

then you start to see from the inside
the whole system
what else can you do inside the local system
still manage the subsystem

well, i.e. the autonomous level of a person
he begins to influence Reality
and it turns out that it forms any system
in the form there for example question and answer
he can form any system
which concerns him so to speak yes or there is external Reality

in this case, external control
there can be any arbitrary one there
and he already starts then well how to defend yourself yes man

i.e. he made the management
formed such a status
entered the Infinite level of control
and then he should already have some kind of protection
from some logically unfavorable level, for example

what is the logic
here is Reality formed according to the primary plan
Well, it was intended, for example there in local action
human
or there by a group of people

and it turns out that this plan was revealed further
in the system of collective Consciousness
we must see

where is it happening as if a development of this plan
in conditions when the situation there, for example , is somehow unfavorable

then it turns out
that it is precisely the identification of a super-distant magnitude
where everything is absolutely favorable
the light from there means at the current time
gives the opportunity to group and highlight
some areas there
which well let's say it needs some additional lighting

and it turns out that based on this
we can see
that in the system of unfavorable management situations
formation of information for example
when there is an unfavorable fabric of information

your action
it is always often a personal action

and showing this action
at the level of managing the environment

Here is the next postulate of information formation
this is the ability to show others
how did you do the job for example
how did you do the controls

if there are hidden processes at the level
look
how people manage each other
it turns out that one person always shows it to another

i.e. life there is structured like this
that everything is open
and information happens very quickly
well, in terms of what is being organized quickly
it seems to appear quickly in some place

and here it turns out that we can see quite well
what well as if external control
which we undertake according to our tasks
is already a target as it were
some formalized management for some task

and all external systems they begin to form like this
that the main thing is to identify the strategic goal
for the personality of a person
and then the formation systems are already taking shape
well, some other blocks of information

and from this we can see
that since a person is able to overcome
any action
from the point of view of his own development
there is some counter action on his Macrodevelopment
for example, creative naturally

i.e. it turns out that based on this
we can see
that personality, by and large, at some level
She is completely unapproachable even on the physical plane.

i.e. a person can, due to such an action
develop management to such an extent and until then
that he begins to see that
and others see

that he is unapproachable
in terms of any kind of impact there

and it turns out that the information generation system
it's more like a search system
Well, there is no exact solution

i.e. when exactly should it be
some right decision
where is a person who has the right to make any decision
he starts moving correctly

i.e. the movement is correct without making decisions
it turns out

and from this we can see
that this is the natural state of man
where he is not obliged to constantly make decisions
some
it means that nevertheless he should have correct development

because at the systemic level of Eternal development
the person must come anyway
over time, even to the norm to full
to the normal norm
this takes some time sometimes

and this is the status that appears
when this time begins to be realized
this is what gives a person
this is some kind of external action
reminiscent of the level of fatigue there
some such action

that a person begins to look at the controls
like personality for example
which this status can supposedly be disbanded

i.e. to perceive

and maybe, for example, without perceiving it
do not disband on purpose
then this status starts to increase

i.e. it turns out that it means adding up the controls
to the task level of the action
i.e. highlighting your own work

you start to see
that words can be used
different types
in different ways
and then we begin to have a stable system
with the dynamics of external action

i.e. such a few
Well a bit of a paradoxical fact
in this management

that the more and more often we change
in social action ^{yes}
meaning of words
well of course for the sake of Macro-creation the only goal

while everything remains in its place
but nevertheless some things
they ^{well as if} they do not change
they are being formed anew

and we see
what when external control

Now I am specifically describing that system
as if by means of repeated approximations to this system

she is at the level
then there is Infinite Deletion there
then at an approximate level

and therefore watching her
can be seen
that the formation of information
Often this is a mutual process
and subject to complete control

i.e. here is the area of reciprocity
where is the external system
constantly at the reagent level
in fact, ^{it kind of} influences
to develop the primary goal ^{and in} management

this is where a conglomerate is already emerging
i.e. the unification of different levels of information formation
and somewhere ^{for example} there on the 12th level
it is possible to form such a principle

but if a person, due to a number of circumstances
does not undertake management
well at least that's what he thinks
maybe not quite to the fullest extent
how to ensure complete control over information
then yes

and here the task is that a person must
in the absolute sense
take full control anyway
any person
even if he is not involved in the Macrocontrol system there

and right here
it turns out that it is precisely the ideological task
for example, appeared to him once
and it stays in the form of well there are memories

and with all this
completely different events can happen yes
there may be systems
which are not defined there by words at all
but in management he must still commit
your own management

i.e. logically just be there
in a social society
help or save, etc.
go about your daily business
give health to everyone around
normal health

and when this status begins to emerge
as a level necessary for control
Anyway

this is what a person does or doesn't do
whether he wants to do it or not

he must be at the systemic level of Eternal development
still be able to do it
explicitly or implicitly

but to a greater extent, of course, it is obvious
and in the future it is always obvious

at the beginning there might be someone else there implicitly
can work

then here it turns out
that this is exactly the action
rests
into a very clear simple ideology of actions

i.e. for the sake of Eternal development

Thus
if the information is well there, let's say, it is not formed
and working at the level before the formation of information

the best most managing level
is simply following the ideology of Eternal Development
and the knowledge that such an ideology generally exists

as even an idea
not to mention that it is implemented
through the action of practice

and the idea that is being implemented
Well let's say always or she is not forgotten there
this idea is the one that always exists and forever

i.e. the situation becomes controllable in that
that a person has made the management himself
receives absolute control inverse

ideologically embarking on the path of Eternal development
he gets really
real Eternal development

this is the maximum level of control
very effective control mechanism

This is where I end today's seminar.

Thank you very much for your attention
