

GRIGORY GRABOVOY
The Teaching about God
Harmonious management
11.06.2005

Hello again
the topic of my seminar today
this is my Teaching about God
Harmonious management

in this topic i show
how to implement
happiness management joy
and generally speaking, stable harmonious management
where are the control loops
well, they are expressed more by a certain level
quite stable so to speak
happiness of management
where we have the level of development of harmony
as a level of both implementation and action

i.e. there as God does
He has
and management
and His Physical Body
this is actually one status
i.e. it's one thing

and therefore it turns out that we must
in some cases implement management
precisely from the point of view of level
and universal and personal harmony

so when we talk
about the level of management happiness for example
as an abstract characteristic of management

i.e., for example, we decided to consider the concept of "happiness"
as a controlling image
use this information and realize happiness

in management, any situation is possible
therefore it turns out that based on the task
we can output as information
any control system

i.e. for example, it is necessary to implement
happiness as an information system
there is, let's assume, a sensory level
there is a situational
event-driven
and we just need to build happiness

in connection with this it turns out
that based on the management task
the concept of "harmony"
this is the realization, first of all, of the internal status

for example for God
His internal state
His Action is still His state
which is not evaluated
from the point of view of often external Perception

i.e. He Himself can, for example, consider
some position
and for Him a personal plan
expressed primarily in that
that he, well, let's say, actually implements
My own personal task after all

and including the general task, the particular task there
and in general here is the meaning of the simultaneity of positive action
for everyone

then it turns out that He gets
management satisfaction
God
and that means the next task
i.e. further management
has fairly clear contours in development
from a human point of view

i.e. here is the concept of "satisfaction"
or there "sustainable management"
there "happy management"
this is still when it is provided
clear predictable future

and this future is perceived

not like a future system
and as a system of the present

this is the main point then Well, let's put it this way
general harmonic control status

when can we say
that we are because of what is happening now
Well, we like to manage there, right?
we can do it, let 's say, the organization system
well, maybe there are such frequently occurring events or something like that
such as happiness for example here

so we know for sure
what will be good in the future for example Yes
i.e. there will be a normal sustainable future that we like

and that's when, for example, we come to this management context
we are approaching
then it turns out that in management
such a system of organization
such as the organization of happiness
organization of remote forecasting for example Yes

there is an absolute forecast
which is implemented in any case
is there, for example, a forecast that can be built
well, a distant forecast

from the point of view of the technology of Infinite development
what is the current action
that the action is infinitely distant
in general, it's the same level of management

i.e. this is how much unification should be developed
what is the management now
or long-term management
should be the same

For God it makes no difference what to rule
Infinite level of information
or the current level of information
all is one in management for God

and it turns out that based on this level
it is precisely the organization of such a structure
how is the happiness of management

maybe the organization is kind of technological

and based on this it means

any management context, well, another type or something
except for the level that is determined by the level of love

i.e. love initially simply exists

in essence, it is impossible, for example, to take it and somehow organize it

artificially so to speak yes by construction

this is the original substance

and any other systems, including these

as being quite closely related to the human body, so to speak Yes
his internal state

or there is an event level such as happiness

it is still possible to organize it in management

and that's when we talk about harmonious management

then any other characteristic

except love for a person

there is love for God

love simply for a person simply the concept of "love"

states of love

all other system

it's quite easy to organize

whatever it is called in essence

Well, I mean the creative system of course

and based on this when we start

set the task of management

then it turns out to be enough at the root of any situation

consider

movement of love

i.e. in general as if a manifestation or a combination

or let's say how love flows

into the control system

how control is born from love

then we can say that this is already

already happy management

because we are watching it

i.e. it's nice to watch

how love takes and flows

in such a structure as happiness management

i.e. this makes management happy

the first element is obtained
to organize the happiness of management
it's enough to see
how love passes into the information system
and the information that means
event building

if the initial root of love
we think that it simply exists

's as if it came from nowhere
there is and that's it
then we can trace the movement of love
from the side

and when we start to implement this structure
i.e. to understand
it turns out that in essence if we
for example, they correctly traced the control movement
then you can see it quite clearly
based on these very waves of love movement
to see that there is, for example, a healthy body
in information
and how, for example, to implement if there is a need for health improvement
there

here the concept of "health" also means recovery
here for the movement of love
this is generally determined only by the speed of movement

for example, an absolutely healthy body and the movement of love
so it means well let's say so
the state of love of this physical body, moreover
means love, as it were, is universal in essence

i.e. love of the body for God, for example
unconditional level of love
where love builds the body

this is generally a certain level
well, some kind of biological aspect

how biological tissue is structured in general
from the point of view of the Spiritual level
this is still a level, among other things

here is the movement of these waves of love
where love organizes the body
this is one of the positions one of the points of view in management

it allows quite effectively
by the way, it heals almost instantly
well, almost all diseases

the main thing is to bring out the control like this
so that the local wave of love would be like that
which starts as local
here you noticed the movement
so that it becomes Infinite
from the point of view of your Spiritual Perception

i.e. the bodily level of Perception

Body perception where love comes from the body
perceived at the Spiritual level
like Endless love
and that's all

you can almost instantly heal
some of those things even
which are simply informationally altered
didn't even move on to physical matter

this way you can
practically make a long-term forecast for yourself
just by working with information correctly

and it turns out that in this case
really work
with current state with current body ^{yes}
and working with the Infinite level of information
it's the same thing

just like for God
the work is almost the same all the time

i.e. how can I get the status of "sameness" of work if so
well, in quotes maybe

i.e. how to work with any event
on a certain equal status

you can, by an effort of will, bring yourself into that state
that you can work with anyone
there is a problematic event or there is not a problematic event
just somehow complicated
or there are those that need to be dealt with in any case

even if the relationship is not defined, it can be
there is just work yes

it means but it is a state of love
i.e. the outgoing level of love
equalizes any positions

so when you radiate love
you work on the basis of love
you also organize
sustainable level of management happiness
there are joys of management

just love in management

and here such a moment arises
which is sufficient at the general level
means love for everyone
love well as if universal
carry out control once
further having this status in ideology
we can move on now
to the technological level of management

i.e. it is not necessary to constantly, as it were, deduce yourself
into some special state

i.e. the person is often busy
he must react instantly
he may not have time to use analytics often
in many situations
including everyday situations

Please note that in some
well, constant, sometimes brought to automatism
everyday situations
the concentration of events is very compressed
and events in principle are scrolled through very quickly in the controls
although a person performs everyday actions
just like in complex actions

i.e. God equalizes the everyday plan
and a complex management plan

simple in complex
the Spiritual spectrum of Perception is more expanded
in everyday life there is more of a logical spectrum ^{yes}
the person is thinking at this moment
^{well} maybe over some private action

and thus moving on to analytics
from one level to another
we can quite realistically consider
how should we proceed ^{yes}
in self-perception
in transferring knowledge to other people

to consider how to equalize
as my personal action
and so it ^{means} the action in relation to which
we work there in management

i.e. how can we say it this way
get your own experience
from the fact that we received some control
and got the result
how to transfer this result to any other
maybe there is a more complex level of action there
or a more complex result, let ^{'s} say

and when you start walking in this integration
in management
i.e. try to understand yourself
you can see it here
what is the organization of the human body in general
there are his souls
in the area of structural plans there
his, ^{for example,} Spirit, etc.

this is a level
which God creates almost all the time
i.e. here you can see the work of God
where he works almost all the time
from the point of view of this point of view

and when you start to enter
to the level of God's Action

then this is precisely the general harmony in management
this universal love for God
at the same time to yourself

Well For example there in the levels of some meditative techniques for example
when people, let's say, worked in their time
well, in the historical excursion
due to concentrations of some of these
which are called meditations

there is always a level there
this is this fine line ^{yes}
is realized as a system of knowledge, etc.

in the conditions of management practice according to my Teaching
naturally any technology is possible
as long as it leads to results
i.e. well for example, the system of long-term concentration, I call it
as concentration i.e. as Perception

maybe it is different of course
from meditation technique
because the task is worthwhile
not meditation itself
there is no structure of any other action there

namely, achieving results
in management

i.e. an ordinary person
even if, for example, he does not set the task of management
Now
he must still be saved
still must live forever

so it turns out that my Teaching
it is still a system that is under control
should always work regardless
even from how intensely or often ^{yes}
the person is essentially engaged

if he knows the ideology of the level of Eternal development
need to connect somewhere
at the level of internal resources and do it

but here is the level of internal resources
i.e. The soul of a person when a person in principle
already has a management tool

it turns out that this is precisely the management tool
he is, as it were, an organic connection
between the state of the Soul of a person who knows ^{yes}
that, for example, in principle he has already accomplished a future event
The soul knows quite correctly often
knows future systems
and what he does now

for ^{example}, if from God's point of view
consider
God knows the future
and does now ^{yes}

from a human point of view
this is something that God just ^{kind of} takes
and He makes and says a certain boundary for Himself
"let this be the future
this is the current one"

and to be in the current
God is with people ^{for example Yes Means}

and He also created the future

so here is the creation of the future in the present
this is one of the postulates
exactly this kind of harmonious management

where is the structure of management ^{for example} happiness
this is a formalized level after all

i.e. from the outside you can just go and say
Well, let's make ^{management} happy.
what does information happiness mean abstractly
Well, it's a certain modulation of light frequency

took and created a control system
received information of happiness

but how real is this happiness?
and how does it differ , for example, let's say
if I may say so
from the happiness that a person experiences
in the totality of a natural ^{situation , yes}

in the situation of developments
when he is not thinking

and there he finds a level of happiness, for example

and here is naturalness, i.e. leading up to the situation
this is the action of God towards man

but when a person modulates himself
happiness
then he must realize from God's point of view
did he really create happiness information for himself
Right

and then a very simple moment arises
that as soon as you enter Macrosalvation
and you will see it in action
what did you do management for everyone

then you can say yes you moved at the same time
as God showed
and even simulated happiness
this is true real happiness

because knowing that is enough for you
that your one impulse passed and helped someone, for example Yes

i.e. it turns out to help at least one
this is already happiness
from the point of view of control logic

and when you work through Macrosalvation
it turns out you're still helping

you can even trace your impulse

Well, as a rule, practitioners should monitor
exactly according to my Teaching
often try to track down specific assistance
there are papers, documents, etc.

and here, actually, there further
when it goes well as if an objectification of the process
then it kind of strengthens this status of accuracy, yes for example, etc.

and it turns out that this is the Truth of management itself
Well, in general aid it's understandable there
but also in the details of receipt we will say
specific help there for each person

this is where a very personal level arises
i.e. how many people really
helped another one really, let's say so

here's from the point of view of logic
can you help there
can you make it so that there
some health procedures have come yes
or improve events there

but in reality I consider this to be the criterion
are only the elements
and real systems of Eternal development

i.e. when one person gives to another
technology of Eternal development for example
well if he mastered something there himself
or he knows how to implement it
some systemic principles

and the systemic principles include that
what if he could cure there
one or two people or even help
so this can be translated
on yourself
on others
as if an extrapolative principle
extension as an opportunity
that such a possibility can be applied purely logically

and then you start
distribute this control
further, as if wider, etc.

and this is where the next level comes in
who comes to you again

here again, well, there is such a question
why did God create man in His own image and likeness ?

and because it's a happy impulse
there is the happiest impulse of control
God can create perfect happiness
for myself personally

any of His Actions
can mean ideal happiness ideal harmony

and then it has a reverse momentum
what did he do there yes For example

here is the reverse impulse that comes to Him
and here is the coming to Him
it is still His own image
the image of a person again

all external information is an image of a person

i.e. if we want to step over the criterion of well that
So we took it and studied all the information
we move for example Infinite time
and finally we came to some kind of milestone
and we think what next

what's next with that information
which is
the most basic level of information yes

and then again it's the image of a person
and absolutely open
Well as if an idealized ideal image of a person
where he has no status at all except for Eternity

there is a person who is directly connected with God yes
he sees God very clearly
he understands what needs to be done, etc.

and it turns out that all the information
in principle it comes from it
from this man

and when do we start
Well, these are the boundary control systems
see

it turns out that the most stable level is yes
Infinite control
it is an interaction between people

that's when you pass
constantly control technology
from the point of view of the Eternal development of man
humanity including yes

then naturally you clearly understand

that's what it really is then
you mean Well, you start giving something to the person

not only that you provided health there, for example there
improved the events or even made them ideal
from the point of view of even all the people there
and what's next there
what do you do next for this person

here further it is still Eternal development
that's when you start to see
what is in Eternal development
you give him precision control
and there's work again

here is Eternal development
this is still a permanent job, logically speaking

a person who is used to overcoming for example
and he thinks that with Eternal development
you always have to do something

i.e., how much control can be done here
Well so let's say cheerful, stable , etc.

and here here
the main aspect of cheerfulness as if management
when a person is cheerful personally
because he is sure of something
from the point of view of external information
these are precisely the results of other people

and that's when he begins to see
that other people's results are sustainable
for example how can God understand
that He created a stable world yes
Infinitely evolving

he must see that people live forever
at least for starters it means
and when it turns out that you see in other people
these are the stable results
well, for example, including because you taught them something
or you behave correctly even for example

then here yes here it arises
mutual happiness mutual harmony

and then you are sure
what is the platform you are on
it really does have the structure of Eternal Development

here you stepped, let's say Yes
stood on the platform of Eternal Development
because another person can do it

and when you are already there
on this management structure yes
this is already sort of like joint management
this is a joint formation
phases of collective Consciousness

then it turns out that the main task is
just a formation in the collective Consciousness
that's exactly what the general plan is actually Well, input or something?
into the collective Consciousness
this state of joint action
in the direction of Eternal development

then it turns out that everyone is absolutely equal
no one has it there
no advantages, no infringing options whatsoever
they all have one simple task there
which is quite clear
and from the point of view of logic there is a person's morality
it is the most appropriate

because in Eternal development
you can solve all the issues there
at least logically it's even clear

and here the following arises
that any work that a person does
with such awareness
it is quite simple and stable
and always has an ideological status
namely Eternal development

and that's when a person becomes an ideologist, so to speak
technologies of Eternal development or just tasks

or even the state of one's own
here it goes
and the transition is happening by the way
sometimes it's quite short, as it were

to the very level of general ideology

well, that is, when ideology
enough well as if for a short time general
concerns his condition

i.e. he seems to see the capture from the future tense
when exactly is ideology
there even the formal-verbal level is different by the way
in the distant future

it turns out that it's often faster
some phrase structures are pronounced there
beginning of a phrase from the beginning of a word
already means word and action

i.e. sometimes the sounds are changed
this is what is special about the future
there is still something to be understood
what's going on in terms of development

just imagine that when telepathy
is combined
with verbal level
then it is enough to start pronouncing the beginning of the word
the rest is clear

or, well, you sit there for a long time with someone at a desk
at school for many years

then the person just starts talking
you already understand
he can start talking
but then the word is not finished

level of deep spiritual-material interaction
at the information level
"material" means verbal and informational

and it turns out that there is a different status of the action
Well, speeding up information
to the level of understanding from the initial impulses

this is where the next level arises
when God says well, does it translate the structure of understanding ?

on other people

in the initial action
transmission information is entered
and further development continues

i.e. God ^{tries} and generally speaking gives the status of equality
because He gives freedom from the initial action
the action began
then the person develops on his ^{own}

and when you start to enter
^{like} at this level of management
then it is clear that any state
For example there is no organism system
from the point of view of the primary level of knowledge transfer
always changing for the better

i.e. it is enough to see here
what is in any system
level of management

i.e. what ^{well} in general, it was originally given by God
and then comes development, i.e. the dissemination of knowledge

and that's why it's spreading
this is the level of already universal stable harmony
unconditional type

i.e. how can we guarantee it at all?
that any event can be improved
change for the better there
introduce management into the structure of the past
and ^{for example} to standardize

we must consider that no matter what happens
only the level is quite basic
you can always extend and improve
just a point of view ^{and} that's all

but this point of view has
^{in general,} quite specifically expressed
objectified positions in information
this is a certain array, ^{let's say} the size of the information

you just have to see that this size is not final
i.e. there are no fatal situations
simply on all expressed primary action
and further so that there are no any there

there really ^{any} radically problematic situations there?

you just have to be able to exclude
in the distant predictable future
this is ^{sort of} an unfavorable level of completion
initial period of validity

exactly fit
not that it is a finished action
this is just the beginning of the action
further you will develop in your direction

i.e. any event can always be taken as a thread of events
and develop it for the better

this is how you build
first level of sustainable long-term forecast
where on the platform as on the glow of the forecast
it looks like some kind of glowing strip

any action is actually based
as an entry level structure
i.e. you enter a special
Well In general it looks like fine grain
there is a macro-granular information system
here the grain principle is again realized here
quite clearly

grain is the beginning ^{yes}
and at the same time the essence of the action

and that's when you start to get into the swing of things
where did the grain come from anyway

then you enter the internal structure of knowledge
i.e. you see the structure of your own development
and you see what you need

Well For example there on the power factor of control
when here is the control impulse
he is stable ^{there} or strong ^{there let's say}
this is how it feels and is perceived
or do you like him there?

how to distribute control
how to get this steady impulse
which, for example, is obviously stable
because you know the forecast ^{for example}

or do you know exactly how to build
strategic management
or do you know the absolute forecast

but you still need a fortune

so for God who created all Reality
how can he determine
what in this world defines well
His personal concept of Action yes

i.e. He can do everything anyway

it turns out that it is precisely the state
definition of state
due to some external parameters
there are diagnostic controls
this is what God calls for example for Himself there
by force yes for example from a human point of view, etc.

or there is happiness of action or stability of action
because for God there is only one criterion
to teach others means

on another level
He basically, well, by and large, doesn't perceive it
when well or what from the point of view of general development

when do you start to shift to this point of view
then you see
that as soon as you set the task of teaching others
For example there is Eternal development
then all your management is determined only by that
how do you assign yourself an internal state, for example
just well like some kind of feeling

i.e. your condition is determined by
what did you decide for example
to have some state there, this or that yes

and depending on this state
which you assign to yourself
you enter it yourself
and from here comes the level of management

this is the level of harmony that is subject to

your own level

Well as if the purpose of the action

it turns out that when you assign an action

Well for example in relation to oneself

then you are in control

the entire external system the entire external Reality

and with all this

the state can be arbitrary by the way

if for example Well, a person can learn

have for example a good condition there

and perceive all external information

how does level up mean Well let's say the contours of this state

at some distance

and then the information is converted and transformed

in the form of already control areas

then she is neutral

for example how to diagnose a nuclear power plant

where there is a possibility of an explosion

some categories of problematic situations

This is exactly where you need to have

some kind of damping, yes

a certain level of space

so that all external information is perceived abstractly

this is how a person solves a problem

he perceives it abstractly

learn to transfer abstract action

into a real situation

and that's why I asked the question

that the organization of such things can in general be

well, considered objectified or something

more situations

well how is happiness

that it depends on some external reasons

if you learn to manage any system there is sensory

as I said, besides the concept of "love" again here

This is where it is very important to highlight

status of love as original

which in principle exists

Well just like that

it exists and that's it
and to find it deeper there
or build some other structure
or build some kind of artificial love there
it's almost impossible
from the point of view of well, precisely the logic of even the Reality of the World

and it turns out that here, if we look around,
then everything else can be built

but then we rely on love
that means we can build everything
it's purely a logical principle, yes

then it is enough to rely on love
and we build everything around quite clearly

means we need a point of support precisely on love

and here there is an action synchronous with God
then this is universal love

i.e. how to get
as if a technological principle of the development of love
what is love already as a consequence of action

here nuances are already possible
but it's still not the same in essence
we are sort of looking at the investigative level
and here it is not even love itself
but rather the logic of development

but when we start to think about it
into the management structure in this way
so that we can combine
as if love is a logical plan of control or something
where we must put the structure of love into action

Well for example there is information about love
we need to put it into control

we can enter
but then we get it right away

exit to the real state of love
what God gives initially yes
what doesn't have well let's say no beginning no end
it just exists and that's it

and a stable level of management is underway
in principle for a long time

i.e. it is enough to introduce love management once, so to speak
highlighting just love on information
to get there many there months years or there decades stable management

pay attention here
touch once only
with information modeled as if by a control system
at the expense of love

i.e. you don't model love
you can just take and enter this control
to some purpose
but know that you took the structure of love

and the impulse of stability is no longer comparable
there you can do it in seconds there are milliseconds
gain long-term stability

the main thing is how to get to the level
i.e. from what angle yes

here is one of the principles
derivation of the reverse action angle
from love management
this is the perspective of the universality of your love

i.e. you do it for everyone after all
for their experience
you kind of teach them and do it for everyone at the same time

also by the way God does
He gets absolute stability for his future.
from a human point of view yes
but because He is still the Creator of all
He does it for everyone.
any of His Actions
it is logically clear that for everyone even

and when you start to cross over
to the logic of control, for example , in this case
then it turns out that you have a fairly stable
harmonious enough such a control field

where is any impulse that you have in logic
precisely harmonious management
translate to external system
comes back to you there with an increased level of love yes
from external action

and you can see it there
that it was you who showed the structure of love
before management
and then comes the reverse impulse

and it's as if you didn't take anything, didn't use anything

in essence you introduced love
i.e. you showed love and it came back
just in a more stable form for you

i.e. you did not influence the events
you didn't make for example the concept of "impact"
i.e. you just gave a picture of love
and it was accepted
and the event improved yes For example

and it turns out that it is also important to see the status here
manage like this
that you do not interfere
into an event structure

how does god manage not to interfere with the structure
in general, let's say there in an explicit and often form
and yet the event keeps happening

i.e. It gives some level
where a person is always completely free
although God determines everything

and this is this level of management
i.e. there is no contradiction here
the definition of events by God for example
for Him
The future is infinite, as is the present and all the past
i.e. the same as the current time and all past time

but the Infinite Future is not only time there

and it turns out that if we start distributing
management structure
because in the past it was perceived
as a structure shifted to time here
in the human consciousness

in the current time event
and in the future to a greater extent
there are controlled there are desired events
where the time vector is located differently

if for example we need to understand
what do we perceive in information yes
people see dreams there, for example there
or just look at the information

where is their gaze
just take and look at the information
where are they looking now
at the behest of your Soul, for example
Where
into the future there into the current into the past

to highlight often enough
time is just technological
i.e. the time of the future means it organizes
defined contour
around there are buildings around the elements

i.e. these are closer to cylindrical
Well it looks like a grape vine
structure as if entwining information objects

if time is past
these are more flat systems
often dynamic and similar to rain for example Yes

the current is a uniform glow
where information is not highlighted in the form

and thus distributing control
precisely in the harmonic phase
can be seen clearly
that in a similar way

it is possible to distribute the structure
Well, let's just say happy management
creating management happiness

take similarly to highlight the structure of happiness
as in the Real World structure

and for example there in the coat of arms of Russia yes
let's assume a two-headed level of management
i.e. the real coordinate
and projection coordinate

and it turns out that we have
actually the level of action yes
and the level is perfect

here's from the point of view of logic
how to understand two heads on an eagle for example Yes
they exist now
so it's a prepared action yes
one head

i.e. before the action
action carried out somehow

or vice versa the current action is one
and the future action is the second head
Well, that is, you can approach the stability of management exactly like this

and it turns out that this is who could have it
there for example should management be implemented like this?
is this management ?
what exactly is a two-headed eagle here

logically it can be somehow distinguished
did this image come

then it turns out that logically in Reality as I said
it is there
this is what the management level looks like
as I said, that's exactly what can be highlighted
in the structure of timeline information

and it turns out that it is an imposition
i.e. well it's like a second control system there
or there's like a second head there Yes
where is the two-headed eagle

this is the level of either the past or the future
either from the current to the future
or even the opposite, by the way

i.e. this is precisely the interchangeability of mutual transposition
in general, complete integration of information

is a very flexible level of information
which is actually capable of solving quite quickly
control systems can be implemented
with this concept

and pay attention in any coat of arms by the way here
in general, even in any stable area
which showed the real facts of management there
often it can even be the emblem of the organization there
or some kind of symbol

in the internal system
the systems of action of the plans are always crossed
implementation systems
well, i.e. it doesn't have to be just two-headed there yes

or is there a level of direct combination of this in management

it could be some kind of internal stroke
in some symbol

and now if we go deeper
where this stability is expressed in the action of yes
then you can move to a completely linear structure

i.e. any symbol meaning some action
you can enter the level of stability
from the point of view of, as it were, internal harmony

when we can understand what is in the structure of the symbol
means harmonic phase
there is a phase of Infinite development

and that's when we start to enter into this management
Well, let's say in principle in all systems of entities there
control points
then you can find this system at any level
there is what a person perceives

i.e. any subject any level of management

which is perceived
contains such a symbol
Well, I mean what surrounds a person

and when you start to go deeper into the information
it turns out that the person is already there
in Eternal development

i.e. a person does not need to look for such places there additionally
try to find some kind of system, for example
emphasizing there his Eternal essence for example

i.e. if all the phenomena of the World are all things objects of the World yes
some material objects of information
bring into structure
having set the task of finding the essence
where they are Eternal
where is it inside these objects
expressed Eternity of management

having gathered them into one point, having pulled them into one
phenomenon
having determined their common property
we will see that the person is already there
even further than all this
he has had it for a long time
there is nothing to find there

i.e. we see a man who is Eternal in essence
and everyday, well, like a normal human perception
there is always the Perception of the Eternal Man

Look, this is such a simple picture
people do a lot of things, yes, they go somewhere
Well for example, we'll take some there
Central Department Store and TSUM

here are the people
such a simple picture
how they perceive each other
although everyone makes their own purchases there

those. the situation is simple
it's clear that they are considering some purchases yes
but how do they perceive each other
when they look at each other

they are busy with something

i.e. the state is such that they

in general, it's not work

Well, it would seem like such a simple action

well, although it is possible for someone

but nevertheless this is not some kind of extreme situation

a person buys something

he is concentrating on something

he's just looking at something there

Some people even relax and go shopping

there is such a theory and practice

and well at least it's clear there

that it is a simple state

how does one person perceive another at this moment

and here it is

although he doesn't look at him with his eyes, for example

then pay attention

that there are certain lines here

as if of unconditional Perception

where one person always sees another

why did I name it exactly, well, I showed such a place there

as a store

if we go into the structure of the action well for example, a nuclear power plant

some kind of complex technological cycle or pilots flying there

they are more integrated

with the external space of Perception

they have a task, they are doing a task

and here it is clear that the human essence

i.e. the personality of a person is his physical body

this is quite a big job within the framework of the task

and if you think about it

then it turns out

that God does everything for everyone at once

so of course He does not manifest everywhere

i.e. His personality is almost

Well, there is the main percentage, so to speak Yes

is connected with the task of developing the World that He created

then it turns out how He should manifest there
He is always doing something on a global scale.
maybe somewhere in one place somewhere there
with the Physical Body to manifest
and for example give a lecture there
or do something there and that's it

and it turns out that if from this point of view
even humans have these functions

i.e. a person is different depending on what he does

and if a person, for example, set a task
development of the World on a universal scale and Eternal development
then he should
almost in the same way as God does
set your management to Eternal development

then it turns out that it was at this moment
he begins to possess
as if a universal essence in management
and then he comes to himself
already more correct more well as if even coordinately
in information

i.e. a person then clearly finds himself
understands its location precisely
in the World
and from here universal harmony already arises there
universal happiness integrated management

now it's clear
that the happiness of management can also be external

i.e. everyone else is happy
you can observe this

for example, people there are happy at the holiday
you can observe this
this is external happiness

at this moment a person may not be happy, for example
but he understands that this is happiness on information

but by and large if a lot of people are happy
it's quite difficult not to be happy at all

still some waves of joy
are somehow perceived and capture a person

he can't fence himself off there
and since he perceived it, it means happiness exists

therefore in the structure of the organization of happiness
in management

what is well let's say one of the signs of stability
we can quite say
what is behind the happiness system
there is some structure of Infinite future events

element of beneficial action
in the current tense
always contains more
sustainable, i.e. desirable for human development
information
somewhere there is a level of control precision

so when you work in management
highlight
precisely from the point of view of the harmonic level of control
sustainable Infinite level of control
all the time the structure of joy
sustainability structure
structure of favorability

it is desirable to learn to highlight this often instantly
just informative

why do i say that for harmonious management
often the structure of happiness
should be like an information system
at that moment like love
it is an action and a state

when you consider
this is this level of management
as information that is favorable , i.e. accurate
but it is possible to create
then you can see it all the time
Infinite Future
as a completely practical tool

and try at least periodically

here on this axis of the future
somehow configure the spectrum management structure
i.e. to perceive the control system
precisely from the point of view of the Infinite Future

and you can see it from here
that this is the Infinite Future
i.e. the glow from this future
actually forms
your own future painting
because you see very clearly very often
certain specific private events
which concern you, well, not necessarily only you

and when you start in these events
enter
you can see
what can be profiled for example
some negative events
for example, to prevent some
well, it could absolutely be things, well something like that
that they can be in the form of some excesses there, yes
some, well, completely unnecessary ones
i.e. those situations that you cannot allow, for example Yes

as soon as you start to react to it
you see that with a certain amount of labor
these situations can actually be prevented
and precisely at the level of the current state
and at the present time

and here it is important to see
what for the current time
often you don't need a lot of physical time
to fix something in the future

It's enough to set a task there in five minutes
manage to do it
any action of distant prognosis

simple task
you have to do everything within five minutes
even if you are there well there in 20 years, in 30 you see
that something needs to be done
there for the salvation of the planet civilization
there for example, some comet somewhere far away, yes

then you should also preferably sleep there
per minute or per five minutes

when you start to adapt yourself to that
that you can balance any strategic action
well in a fairly short time
in relation to the years of time there

then basically you are already entering
into the system of that practice
which is mastered not because you
set up time management like this
what long-term forecast did you make there?
some kind of decades ahead for example Yes
and then to confirm the forecast
you need to wait there

only because you learned to act
right now

i.e. the level of action
at certain intervals of time
it doesn't have to be there at five o'clock
maybe there you learned to work in milliseconds

this is this systematicity
when did you learn to correct
at a certain internal Spiritual level
you understand that you can do this
even if for example you have done it before for example yes and so on.

here it already arises
such a system of Macrostable management
as God does
He does it himself
and He knows that it is for sure
it will have infinite development

and this is what you get
it would seem that there is often little experience
in a person

For example, he just started to get involved in management
there according to my Teaching for the universal Salvation
just starting to do

all he needs to do is learn to do it a few times
get the result
at a certain time interval
which he may even realize later

maybe he works all day ^{yes}
but he still got the result

and then you get universal harmony
not only in terms of what you do there
receive some external information
because you do it yourself
your action is control

and this is already an absolutely harmonious level of management
which already gives a natural level there
happiness joy stability
and generally speaking real harmony
first of all, by the way, universal harmony
with this approach

and then you can enter your harmonious phase

and then any action becomes natural
i.e. your control falls into
in the natural course of events
you don't even have to do anything special often

your natural action
this is the general exact there
and the control is the one that has it
real level of Eternal control

therefore harmonious management
it is still an element of Eternal control

as soon as you enter this situation
that's all
you solve it naturally
and often much faster

This is where I end today's seminar.

Thank you very much for your attention
