

GRIGORY GRABOVOY
The Teaching about God
Infinity Management
18.04.2005

Hello again
the topic of my seminar today
this is my Teaching about God
Infinity Management

In this topic I show how
having the concept of "Infinity"
you can use this concept
in general the real state of the environment
in order to achieve goals through management
precisely through the management of Infinity

in this case there is
another criterion of this seminar
it's the ability to do so
so that Infinite information is manageable

and then it turns out that we can use
this is the spectrum of Infinity
to solve some problems

so in today's seminar
preferably at the time of control
i.e. at the moment when I speak
about the structures of Infinity
about how to use them and how to manage them
immediately solve your specific problems

i.e. for this you need to do it like this
to identify a number of tasks
was located somewhere in a local, so to speak, magnitude
i.e. outside the system of Infinity
i.e. a certain light region was identified
and precisely the elements of Infinity
this is usually an expressed information environment in optics

i.e. it looks like a rule
in the form of such a white color dynamic plan

and the ability to manage this system

when this dynamic environment
touches

with your area of information
Well, exactly with that area
which means solving your problems
then, as a rule, the management itself is carried out

because it costs only Infinite quantity
bring
to your task system
then in the Infinite environment there is always a realization
from here on the path is actually quite simple
in management

therefore it is necessary first of all
means to get tasks
it is better to get them from the same system of the Infinite Environment
how to move closer to the physical body

and then revealing this glow
of his task
in the form of optical glow
try to make it so that the Infinite quantity
touched
with the same task

i.e. in fact we are from the Infinite Environment
first identify the problem from the outside
your own
we attract closer to the physical body
and then we only manage the external environment

it turns out that the task itself is located
in a segment of this Infinite quantity

therefore the dynamics of the system itself
this is usually the action of your own task

and if we go deeper into the meaning of this concept
then, for example, having looked at it
movement of blood in the human body, for example
we can consider that
well, from the point of view of a kind of abstract system
that the blood can move virtually on its own

i.e. if we consider this detection system

some local environment within the environment of Infinity

for this it is simply necessary that the functions of the blood
they were on the outer borders of the Endless

i.e. the blood must perceive it turns out
from the point of view of as an element of Consciousness ^{yes}
blood as an element of human consciousness

perceive walls as infinite quantities

then it turns out to do

process ^{for example Well let's say} the blood circulation is Eternal
in a person

need all the time

try to at least make contact
blood with external elements

^{in general, by and large}

and contact between individual blood elements
need to make it Eternal level of control

that's why it turns out

to control ^{for example} the Infinite quantity

it is necessary to consider

some local areas, ^{for example} , of the human body

consider as all the same

the system is practically ^{like} an exit to Infinite quantities
or even organizations of Infinite quantities

therefore the management of Infinity

this is actually all the same

real search management ^{in general}

i.e. first you highlight

the level is precisely optical

^{kind of} capture this level

by force of will

and start working with the system

i.e. that's the difference

in the management of Infinite systems

is carried out all the time

Primary capture of Infinite magnitude

because as such
for example, there is the concept of "Eternity" ^{yes}
it is a static environment generally speaking

Eternal Wednesday
it has a difference in information
She's just everywhere
near the structure of human perception

the Soul itself is originally Eternal

and here is the Infinite quantity
where there is no end, SO to speak ^{Yes}
differs in information from the structure of Eternity in that
what do we have more
in dynamics the manifested system of Perception

so actually ^{well} meaning often
semantically it's the same thing
the change is in the form of a word
means generally speaking a different type of work even

if the work is in Eternal magnitude
this is a structure of work more with statics
then in Infinite it's more dynamic

and not even with the usual dynamics
namely, in terms of search
you have to find it first
and bring it into the management structure

so in order to make management
for example, it is necessary in the phase or ^{as if} in the control task
Well, as a rule, this can be a task
even ^{as if} connected with your physical body
near you there in a radius ^{for example} there are five meters

set the concentration to Infinite value
i.e. it is easiest to identify the flow of Infinity
near yourself

and considering that this is still a flow of Infinity
i.e. this is ^{generally} a healing flow, among other things
i.e. it is a flow of action
where there is management of multi-valued events

because the more parameters of events

we take into account in management
the more accurately we reach, for example, local systems

let's assume when you are absolutely sure
that your event has been achieved
when you know for sure
what about investigative events
or peripheral ones are also achieved yes

i.e. the larger the information package
the more precisely you achieve control

and therefore in the Infinite magnitude it is very important
to control precisely Infinity
to see as if an external position in management

i.e. for example Well, I can suppose to show such a system there
well some optical element of light from the left hand
transferred to management
exactly well as if in Infinite Control

and I can have an external level of control
through an element of, as it were, external Consciousness
view the structure and dynamics of light

i.e. I get this element from somewhere
this element may not be connected at all, let's say directly
with some specific level of body and physical

i.e. in Infinite magnitude
physical body
has a very fixed nature
for the Soul level
i.e. the Soul perceives the Infinite magnitude
as the structure of the apparent physical body
and specifically a person
and by the way, you can see how the human body is built

and for example in dynamics, if we consider
as human consciousness
then we see that the Infinite quantity
in fact, it is very ambiguous

and this is Perception, actually, external
this is usually Perception
all people at the same time
and myself too

i.e. a person in this system initially differentiates
not myself personally but
you can find your coordinates at a general level, that means

and at the same time it records
almost all systems
people first
he sees how God works, by the way, here
quite transparent in this system
and at the same time deals with a specific person

i.e. to deal with this task by a specific person
it's like doing something

there by yourself any other person
this is ^{actually} very typical
Well there are many people there

but here, ^{in general}, it is visible very clearly by the way
what to do with yourself
it's just like dealing with any other person

i.e. there are no advantages there , for example
or there are understatements or exaggerations
completely equal conditions
for everyone including myself

and that's when you start
enter this system in management
then by the way it's much easier then, on the one hand
because your personal experience
accumulated in terms of work in general
with other people ^{for example} Yes
it is transferred to you immediately

i.e. then it becomes easier for you to decide
your own problems

and on the other hand
man as an individual level of management
starts looking for this
and what in a specific case for yourself in general
what can a person gain there
some additional advantages, ^{for example, yes}
precisely in the Infinite Environment

because he has some kind of tool

it is believed that it can

for example more well there you should pay attention to yourself yes

means to solve his personal problems

In fact

as soon as we enter the Macrosalvation system

again, equalization is taking place already on the Macro-meaning

means Infinite quantity

from the point of view of personality systems

is based on two levels of personal Perception

why is it important to identify here

personal perception

because that is the criterion

this equality is initially upon approximation

to this environment

and then equality through the Macrosystem

i.e. it turns out that we end up

we have a fairly universal one in general

some such isomorphic even area

when moving in which

we always have the same chances of action

it turns out to be an infinite quantity

from a logical point of view, that's how it is

because the chances are almost the same

since it is an infinite quantity

then its action is generally Infinite

and the task is to practically get

final action

track down the final perimeter of some kind

precisely in action

because how is this light captured at all?

from the very structure of Infinity

it is physically visible

i.e. first silvery white

then a silvery-white stream

then a golden glow is clearly visible

ejected as if in the form of separate fragments of light

like some photons

means that we get an Infinite characteristic
it is reflected very clearly in the spectrum
in the first wave of Perception

an ordinary bush like this, some light
indeed the root is somewhat whitish
and then golden, like , fragments of light

and it turns out that
Well, maybe it looks more like a sparkler, so to speak Yes
this is this emission of light

and when we start working with this system next
our task is to get the correct event

these photon emissions need to be collected
track them as if the final action
this is where it comes down to the final value

i.e. it turns out that for us this is the most familiar one, or something
management method

from God's point of view
He perceives both finite and Infinite magnitude.
generally speaking the same

that's why we see this
as a consequence of working with the Infinite quantity
"sameness" of some kind, either in quotes or real
it is precisely the Perception of God that is realized here

we work in the system of God's Perception
because the Perception of God is Infinite
and that's why we work more in His coordinate system

so it turns out that we need to collect
this one well I think this is exactly the option
some projection of these photons
comes from the root of such
some sheaf of light

then this projection should first of all
pass through some canonical human body
i.e. well For example it's absolutely healthy there
absolute success there

in some social events in a person, etc.

i.e. here is the control of the Infinite quantity
constantly passes through
as if almost an absolute Norm
essentially by the fate of man

and that's when we start to enter into this system
then we see quite clearly that yes, that is how it is
in this system we manage
Infinite quantities are quite simple
i.e. they become manageable

the more a person is canonized, as it were
from the point of view of the logic of Infinite development
the more well does he have any ability to manage?
namely, Infinite quantities

logically it is so
developing over a long period of time
a person gains more and more experience
more and more have better opportunities , so to speak
for control, etc.

then it turns out that it is more consistent
management level
including Infinite quantities
Well, that's the logic of the process.

from the point of view of the Spirit
The infinite quantity simply seems to recognize
similar system

i.e. management environments
become, in principle, as if of the same type

and then the person begins to acquire
namely the properties of Infinity
as if functions of Infinity

i.e. his thought becomes
not just there with some final thought
one
and as soon as the thought gets into some environment
it has an infinite resonance in fact

i.e. it is constantly rolling

if it increases or dies down somewhere
but it looks like resonance

and by the way, you can listen to your own thoughts
and if, as it were, in a "subtle" ear yes
Well, let's say it's in a hidden rumor
in how you listen with your Soul
rumblings can be heard
this is precisely the work of your thought in the Infinite magnitude

and by the way, many people use it quite often
in order to stabilize some condition

This is generally a diagnostic condition
to understand
there at the moment with a person, for example
well, in the usual sense of general generalized analysis

it may well be that the person is doing well anyway
but he needs to objectify, for example
your condition
in general in information so to speak

what is in front of him now yes
what tasks for example in general
which he may not have even considered

but they do exist , for example
like what you are in the future
you may meet someone you know, etc.
i.e. they exist these tasks

and here you can
precisely as a kind of canonization of the diagnostic type
consider
the rumblings of these thoughts
like some there well, such bells, so to speak, they are heard
namely bell-type peals

here is the ringing of the bell
most closely matches the Infinite form of Thinking
where exactly are the rumblings of this environment of thought

why exactly the ringing of bells
because the spheres
they start to not just shrink
and produce sound

generate virtually identical information
which is similar to a sound wave
inside this sphere

because every action
aimed at the final system
and the sphere focuses the action into the center

as I said, we need to identify the final action
from this system of light

and the sound is most consistent with the source
i.e. it is always clear where the source of the sound is
and ^{well} at least you can always say
where is it approximately located

and it turns out that if we move on
to the sound form of control
but the task of management
This should be clear to anyone
how to save yourself ^{for example}
or instantly or do Macrosave

i.e. in principle it is possible
it is enough to explain a lot of control systems
it can take quite a long time to pass
deeper into the control system
and this is always better of course

but the task of management is instantaneous
either you help now and instantly
or another person will immediately recognize it
and receives comparable assistance

i.e. from God's point of view
assistance should always be of the same type
and is aimed precisely at the structure of Eternal life
i.e. realizing Eternal life
a person specifically
in the Image and Likeness of God

it turns out that based on this
Here is ^{an example of} the structure of the treatment of the disease
in this system
This is usually a complex level of control

if you enter here
there is a problem of some person's illness
into this system or there hall
then here you can see that at each level from different sides
and even physically from different sides
systems analysis in progress

here you can control the information
not just as the information itself
and as a physical array

and control this information
well, practically from all sides

if I have an array
I can see it
from this side I can from the other
and it is clearly visible as some kind of holographic system

that from different sides
information is managed differently
closer to myself for example I can create an Infinite level
i.e. the closer to the person
Moreover, I see an Infinite system of events
the further, the more local the system

and pay attention to what you receive when
some close events
they seem to be you
from some distant level of information
are catching up

This often happens in childhood
when the control system is transparently visible often

and by the way, that's why, by the way, in this technology
it is very easy to treat a person's disease

i.e. it is enough to go out
into the structure of a remote level of Consciousness
where does the structure of information begin, as it were?
and just block

you just have to remember
that you work in the Infinite Environment
and that's all

there are different

then a disease signal is obtained
does not pass does not approach you
and that's all

work two or three times
as a rule it is a wave principle
and then there is a slowdown

and then you can enter the microstructure
and dispel in principle the essence in general ^{yes}
management structures
well, which is called "disease" ^{there}

and here, by the way, this process is very important
if there are any extreme things there
where you need ^{exactly} quick help

For example ^{there} might be some kind of heart attack
or some such complex states

but as a substructure
this works very well
if there are any burdened systems

for example, in the case of ^{stage 4} cancer
or AIDS or some other complex ^{diseases}
it turns out that there is an array of information
all the time very big ^{there next} ^{yes}
and you have to work with a large amount of information

to work with him
we need to work with a comparable system
for example Infinity

and then it turns out that here
this is the management structure, ^{that 's} what it is
that you can the very structure of Infinity
just to withdraw to everything ^{well as if} beyond the field of Perception

i.e. take it in general
and as I said you can control the external system
and bring out your system
outside the field of existence of this information object
i.e. ^{how to} turn it off ^{and} that's it

because in essence, by and large
information
this is a certain, let's say, original
informational- there is a material environment
she also looks material

you can even determine its place there
can be filmed
can you determine the shape

this material environment is actually
she is really material
here it forms some event yes

if we remove this environment from the management structure
then the event is not realized negative

that's why by the way the environment is often located
depending on your management
if you take it out
it doesn't transform anywhere
it simply ceases to exist
in this area of space

and one more very important parameter
in the management of Infinity
what can you do there management
in fact in this way
just like God does

He made control at this point in space too
the space is like this
as if there was no intervention at all yes
originally determined by God
well, i.e. God still does it in an earlier substructure

and you can look at a person
such a path in Perception

if you work from the point of view of Perception of God

then you can make the control like this
that there are practically no traces left in the information field
that there was some kind of interference, for example
the most natural level

then the immune system

if this is a treatment
quickly recognizes the system and makes it his own

i.e. it actually starts working like this
as if it were just her
the immune system as if did yes
if we are talking about the immune system

if if for example for example, it is some kind of organ
which remembers the control structure
it turns out that this is the most natural state
for him

because if there is no intervention
the organ develops independently
in information
from the point of view of self-healing, let's assume

and if we watch an event
then this is just the most natural course of events

i.e. here is the ability to exclude from information
system of influence
This is one of the parameters of Infinite Action
or control of Infinity

because it's quite clear here
what is the Infinity array
if it affects
some element of space-time
then it can actually capture
with Infinite speed as if leaving no traces

high speeds create
Well in general, some kind of impossibility
often fixing the intermediate environment

but if, for example, there is some kind of Microworld there
and with microsystems take and clean up
something at the Macro level
then the microstructure may not be visible

and the Macro level will remain the same
there in a cleaner and more level condition

it turns out that there is a kind of dispersion of the system
i.e. the source of action is less noticeable

due to high speeds

it means one of the certain postulates of working with Infinity
this is what happens when working with this system
you touch on it all the time
root control or information systems

and that's why it's important to see here
that even at high speed
you can do it quickly enough
for example, to make a quick recovery there

or make some kind of extended management
to which there is no need to even return in the future
i.e. you did it, it will definitely happen

and this rigid fixation
not because you are just sure
there at the expense of diagnostics or information

because you just did the right thing
i.e. in the Infinity control system
The following is important
that once you form Infinity
actually take control
it is still a dynamic form

and the ability to take control
namely a certain dynamics of light
this is a special task

but nevertheless if you take it
then it is enough to touch this form
to some problem
the problem will be solved in the future

and this is this control system
she's very well as if mobile
and in general it can be used
at the very earliest levels of management

Well, let's say when a person still sets a task
master some system
for example, to control there, etc.

With practice many people
they just work and record the results

they don't have that much interest there
the system calls for additional control there
to see

i.e. they start working more in practice
like a flow chart and management

and in this system of working with Infinity
you can exercise control very clearly
in general at any level
even if the person there is a good professional
in the field of management
and he often already knows at the level of Spiritual diagnostics
what does he do normally
he doesn't need any additional control

that's exactly it
well, a certain lack of additional control
this is work with Infinite quantities
because there the form is absolutely clear

and what's here
so why is it clear that she has
as if, first of all, the dynamic nature
i.e. it moves all the time

secondly, it is clear by the way for another reason
that the forms manifested from the Infinite magnitude
always very specific, clear and practically unchanging

if you manage to get a shape from the Infinite quantity
then it turns out you always get
well, a very solid form of information

because it's clear here
that the intensity of the processes is very high
in this case

and here is the selection of this final element
this is always a very important achievement

and from the point of view of management, for example
there is a physical body of a person yes For example
here you can see the principle of control
as if by external parameters
just some information, even energy, so to speak

after all, Infinity
has the properties of accumulating such an environment
which can be called energy

due to high values if we don't fix it
namely high-speed quantities
even this way you can be more specific

we fix the structure of some optical systems
which are generally expressed
in the form of such a constant glow

we can just do it practically like this
observe
where the Infinite quantity develops
view several levels
and make a capture of this value
well, like some kind of system that collects energy

this is exactly what the collection of so-called energy means
or, more simply put, the concentration of events
where is the implementation taking place
It's more convenient to do it through Infinite Value

i.e. it turns out that the Infinite structure
it works like some kind of engine or something
as some kind of system that works
practically independently strengthening
your impulse in control
precisely to the Infinite magnitude

but in fact, the level of your management is like this
that as soon as you bring out the level
then the level still becomes Infinite
as soon as you output it to the control system
your some impulse
or even some level
horizontal eg vertical

it turns out that when you act
precisely from the point of view of the logic of processes
that any impulse is Infinite

then it is clear that the transition to the primary level
i.e. to you personally
this is a completely understandable transition

from the point of view that if you enter immediately
into Infinite magnitude
you hit a beam of light

move on to yourself

but if you go from yourself
and there yes as if in the Infinite control system
Well, let's see what's going on there
where is it and what are its properties

it turns out that the transition here is quite long
i.e. much longer in time

the transition from the system to you is almost instantaneous
and from here it's a long transition
Well, maybe it takes a few seconds
it all depends on what level of management you have

and if it takes a few seconds
depending on what kind of sound control
is it tightened or not yes
in the area of interaction with the information form, etc.

but nevertheless it is still a long time
comparable
with the fact that practically to you this time is instantaneous

and if you think about this parameter, more precisely yes
it turns out that we can develop
from myself some well For example there for a long time yes

and the system is external
it practically has the property of instantaneity

and if we consider that it is necessary to cure the disease
it is clear that a person has a certain path
when generally speaking no diseases occur

because the difference is basically huge
in the external system and in the internal one

i.e. external information as some kind of centrifugal force
ejects constantly at great speed
this is generally a one-time but discrete value

and the fact that you are moving away from yourself

this is a value well as if prolonged
i.e. cause and effect

and as cause and effect
you can perceive yourself personally for example

and here is this difference
you can always find yourself
in Infinite Information
and by the way, it is also healthy

i.e. if this system is known technologically
see where the Infinity contour is
where does it close
with the release of this final, or so, super-speed value
then this is a powerful impulse, in general, even to normalize events
which, for example , you don't like
They may not be problematic but I don't like them

and you can target problematic ones even more
structure of Infinite magnitude
and how to "take" an event in a diagnostic parameter

information about the event begins to roll down
on the plane
or on the structure of Infinity
and the following structure
begins to diagnose and, as it were, to level out

This is where you can achieve it
self-leveling system

she is quite active this information
and works on the system
including well, practically what is called
really as a system of internal environmental resource

and for this reason it is very reminiscent
human action

if you think about it
who in general how and what
most closely resembles human action

the man himself is clear
we speak besides man

then the closest thing is the information of Infinity

and the properties are often of the same type
there is information distribution
just like in human tissue

and for example if we want
practically well there it was somehow instantaneous

or to get healthier or to replenish
Well let's say with the same energy yes
well just feel some energy
which by the way is really positive for the body

you just need to be in the structure of the external Infinity
find the segment that matches
as if in some kind of vibrational informational plane
to you
it looks like it's the same light
that comes from you
and it comes out a little slower
and there it burns as if forever

here is the connection between Eternity and Infinity

for example God created Eternity
He often well how could I not define the concept yes
"Eternity" or " Infinity "
but nevertheless two words exist
from God's point of view
each word is a different concept

and it turns out that from the point of view of the difference
here is a point of unification in this regard after all

namely lighting systems
man and Eternal and Infinite
Infinity of action is Thinking for example
Eternity, well For example there is the Eternity of the physical body
those. different parameters yes
different types of control objects, so to speak
Eternal physical body
or is there an Infinite thought

but here it turns out that we can do it this way
docking the Infinite thought

knowing that it branches out
as if this certain gong gives there
such a sound of bells
already in the distance it makes a sound
which is the healing one there
gives some information or energy
which gives exactly the structure of life

i.e. here you can clearly see
what is life
it's like life opens up

life is an infinite quantity
if we begin to see its opening
then you don't just have an ordinary life there
but it is possible to come to it quite technologically
precisely to a real happy life

i.e. it is seen first as a state of happy life
and then almost literally instantly
transition of the Soul to the level
well, i.e. Perception of the Soul
it looks exactly like a transitional level of the Soul even
i.e. this is some other level of the Soul
where is real happy life

because in the structure of Eternal development
we must clearly understand
what structures well for example happiness health eternity
these are defined structures firstly
from the point of view of Eternal development

what is in the ordinary sense of the word
and so it is clear that
what is health or happiness

and from the point of view of Eternity
these are more of a reserve
more redundant systems

because in the structure of Eternity
health can't for example yes, it turns out to go down
to the level where it is not provided
next help to the body

i.e. the body must have reserves

for organizing self-healing, for example
at any time

and therefore the reserve functions must be significantly higher
well or sometimes a little bit higher, sometimes significantly higher
depending on what events are in front of a person

and by the way, now it's clear
why God for example
He can work just as calmly as a human being.
because He doesn't always need it
there are some huge masses of control there
often it is minor management there
i.e. reserve means it should
just fit the task exactly

and sometimes for example there are huge arrays there

and in the Infinite System this is very clearly seen
if, for example, you ask yourself a question there and compare it with that
like this information of Infinity
comparable , for example, to God himself

i.e. then how does He look at this level

so it turns out that
Well, first of all, it is clear that God has a physical human body.
it's all clear

I meant that on the information
if a person is something
there is acquisition of knowledge, there is experience

active interaction with Infinity
there as part of strategic development
or there is some local partial level of control
according to their tasks
or full level of management

then for God this value is still constant

that's if we want to understand
how infinity interacts with god
then from the observer's side
this is a clear stop, as it were, of the action of Infinity
the dynamic quantity instantly turns into static
the form seemed to freeze and that's it

and that's why there is another one
position of the study of the Action of God
according to his well as if allocated to a person

i.e. for us God singles out precisely the structure
which in fact, so to speak, is visible as static
in some cases the system
then it is very easy to study it

i.e. God gave people there almost completely
the entire system of knowledge
shows that there is nothing complicated
there are things that can simply be statically highlighted
and study them calmly

and now imagine if there is a problem
Well, any problem there in principle, yes

is it complicated there or not?
if so let's assume there is some kind of complex disease there
it may not necessarily be difficult but it is very burdensome
or unknown by characteristics
what are the consequences yes also an unpleasant quantity

then it turns out that we can
calmly highlight the structure
study it calmly

and here you can see that we always achieve
positive management
so the initial forecast
we can immediately get positive

Infinite quantity allows
get the forecast you need
because of well as if a huge number of combinations of events

and even if you look at what
well, purely on a theoretical probabilistic level
she and the environment combine in a fifty-fifty event
you just need to see it, you're already fifty percent decided

and if you also stopped the structure of Infinity
and approached her from different sides
something was corrected, something was added there

Well, it's like a kind of hanging model in the information
and you can easily regulate it
wherever you want in principle

you can take it and translate it into canonical form
remember
and that's all

bring out the form at this point just perceived
and that's all
you are constantly in control
positive sense

and by the way, in the structure of treatment there
let's assume chronic diseases in people
it is often necessary to make such systems
output into the structure of a fixed control phase or something
try to remember this place

the only difference is, for example
well, in the treatment of, say, animals, plants, people

in that for a person
the sphere almost instantly becomes Infinite
in the structure of the primary impulse of Perception
this person
for example near the skin somewhere

and for an animal or there
there are different types of forms in general
it is possible to identify the form
corresponding in general in the World
to some or somewhere even
often it is some kind of animal
you can determine the shape
immediately instantly

and is it possible if we to someone
level of Reality in general
we can consider
what action is this anyway
what does any kind of information mean anyway
in your Perception
from the point of view of Infinity

and make a very clear catalog of sorts
projection

that there is a tree there
what is ^{suppose} some kind of animal

and then, generally speaking, it is possible to treat
to improve health there
improve the environment
simply through viewing systems

just in the Infinity system
you placed them correctly
i.e. you perceived them correctly
and correct Perception is already a solution to the problems

because this is already a kind of launching pad
so that you have management reserves
you can already manage
^{for example} , in fact, there is its own development
based on the facts of mastering some technologies

it turns out that here you are always using
in the famous model
^{for example}, if a person sees
Well, there's something he doesn't like and it needs to be standardized.
he internally tries to always regulate

same here
it is enough to fix the structure
precisely in the Infinite Environment

and it turns out that we get
a fairly powerful control system
which actually works
well, due to the primary level of Perception
the first wave, ^{as it were}, even

because Infinity itself
is a kind of initiator
a kind of locomotive, so to speak
the one that drives the whole system
exactly in the area of your tasks
solutions to your problem

therefore, based on this, it turns out
in the solved problem in your
in the future
there is always an element of Infinity
but projected into a specific event

this is very important
it's like coming to some place
look around and, for example, touch
so where exactly was the splash of Infinity here
in what place in that specific room yes
some specific event

and once you recognize this place
by the way, but here it is in the information
has more of a golden glow
this place

and from the side, here to identify the object
if we take this for example there is gold to heat it up
how to melt well how to pour like metal
and this is approximately the shape of the spilled metal yes

sometimes it looks like
well, as a primary action, as if
how does the information look like this
what is like mercury when it is spilled
First it rolls and then it turns
in such a way as hot metal solidifies
and that's all

and then the glow becomes silvery-white again
i.e. golden color while there is dynamics
as soon as the white color was fixed again

this is the difference in the transition
from the final level to the Infinite

and only in things it looks the other way around
i.e. the static system is the golden color in reverse
and the transition is exactly this white, sort of fixed color

i.e. static things have it turns out
dynamic property
what from God's point of view is dynamics

and then it is clear that in the Consciousness of God
It is clear that any static things
there is also maximum dynamics

i.e. God with His Consciousness
folds each item almost simultaneously

and if we for example Well, let's ask ourselves a question
for example, a person created a thing
after all, man did it
where is the Action of God for example

and that God looked ahead
and He generally sees the structure of all events

i.e. the absolute quality of the vision of God
how does God even see and build everything

then it turns out that He controls Infinity yes
All the transitions are known to Him

this is when we get closer to that level of control
then here by the way they are implemented quite quickly
very many things are often complex

here in the management structure of Infinity
it is clear that it is possible to implement things in a comprehensive manner
it is not necessary to highlight only one task, the second, the third

but we stand at the position of many tasks
if we start to see these positions
as a kind of control system
like some well For example there is a control front there yes
the wave is frontal so to speak

and we decided to concentrate the events
i.e. they got closer to themselves in management

Spirit means as if I had considered the tasks of the body
from the point of view of the tasks of developing the action

it turns out that the meaning here is basically this
that the closer we get to ourselves in management
the more concentrated our tasks become
the more we see
what other tasks would I still need to complete ?
in this task basket

Well, we brought the management to some level
and it seems that's enough
we have formed a control field

what is the task

so when we already think about it
and how does God see this system of governance?

then this is some kind of capacious level of management
some kind of deflection
this is your ^{indicator} point
which concerns Infinity

the bigger your task basket is
the greater the curvature of this frontal level
in the system of Perception where we work
in the Infinity system

this means we are more precise
we are interacting with Infinity

i.e. the more tasks we accumulate
the more Infinite environment we interact with
logically , that's how it is
more tasks means more time is needed
more ^{like} finite quantities, etc.

considering that each finite value
goes into the Infinite
so that some disease can be instantly cured there
often you just need to get into the structure of it
into the matter of the disease
and the disease is cured from that
that they just went inside there

because when you are in control you go inside
you are giving ^{a kind of} canonical flow ^{yes}
to the root of the problem
and the system itself is leveled out
in relation to that world
which you introduced into this tissue system

and often what the disease is
if it's a tumor there
where there are arrays inside that are ^{kind of} inaccessible
for the normal cyclicity of the organism

then entering this information inside

this is a very strong action
on the restructuring of tumor processes

in principle this can be attributed
to processes in a universal sense
there is some kind of virological

For example For example , the flu virus can be treated there
by the same universal level
just like a tumor or the AIDS virus, etc.

because that's the main thing here
introduced as if a rod matrix
which means Norma
and that's all

this matrix starts to shine
and for example it starts to happen
restructuring of the tumor to the norm

often it is in the same place
healthy tissue just grows
but sometimes it is the breaking up of the tumor into fragments
and the natural output is like from the body, yes

it turns out that we still need to control it here
what type
if the natural conclusion
so inside each fragment
such a rod must be introduced

if inside near this rod
healthy tissue is organized
then there is nothing more to do there

and in the first case
when exactly does healthy tissue organize itself

much better because then there are no scars left

second case
conclusion then you need to treat the scars to dissolve

however, it is an effective way
as soon as we are in the center of the rod
insert the structure of Infinity
so we immediately get a very powerful effect
this is exactly the nature and type

when we see further
that we can in principle insert a rod
at any event
i.e. it is then enough for us to normalize the event
we just need the fabric of the event
and insert some canonical phase of the event inside

and maybe this is a universal phase
Well for example, determine initially
Health norm
Norm of social events
as some kind of simple informational norm
it is not necessary to go into detail

what is the Health Norm is clear
Norm of events
Well, at least what you want is being realized
and at the same time, of course, Macro-creative

and do you know any criteria
what is Norm in principle anyway
there if a car is driving down the street and it hits another one
This is clearly not the norm anymore

i.e. the Norm is a fairly clearly balanced Perception
at the level of the Spirit mainly

that's exactly in strategic terms by the way
in a remote system
Spiritual diagnostics very clearly fixes the Norm
although it is, in fact, a mobile diagnostic

and once you have fixed the Norm
and introduced , for example, into the management structure
that's the main thing here
this is some kind of "rug", so to speak, in quotes
events
we need to attract to ourselves and understand the structure

in each case the event has
different nature different structure
and as a rule, two events in general
naturally there are no identical ones
even if it's the same letter
but the world has changed and the structure inside the letter is different

and that's why it turns out
what we must find in each case
some kind of path corridor and in control

and here is a very important property
has the control of Infinity
where do you translate calmly
structure as if Macromanagement
into the final objectified
and in general a dynamic environment

because the more you work
the more it is desirable to work
Well, at least there are such periods
precisely with dynamics

because working with dynamics
allows you to interact more with information
i.e. it means that a person gets tired less, etc.

and especially when it comes to
about for example there is treatment of complex diseases
here you need to output
dynamic functions are often even specially

because static functions often quickly exhaust themselves
if we introduce control into statics
statics can instantly gain control
and that's all

and a dynamic system
it can be sort of "pumped up" in quotes
or implement as much as you like
i.e. we can introduce any external systems
and it constantly absorbs your control yes

Well, "absorbs" is said in a generally conditional manner
although it looks like you entered control
it was fixed
and you have a kind of resource
i.e. you don't get exhausted in any way

what's interesting is the more you invest
there in the dynamic system
the more energetic and cheerful you become
in fact

because the concept of "management" is always an experience
it is always the implementation of some system

the more you do management the better for you

here is the concept of some kind of "resource"
or some kind of "energy" is spent somewhere
this doesn't really exist
there is simply an action and its realization of the action

can you do it like I said, by type of energy
how can these fragments be worked out
but they have finite systems

and once having collected a certain "harvest", yes
so peculiar, if I may say so
due to the control systems of the Infinite
you get it yes or you get your fill yes
but this is a one-time action
Well, that's enough for you
maybe it will last you a hundred years in principle yes

but generally speaking it is still a static value

and we are talking about that
that we ourselves develop the management system
and then we don't depend on anyone at all
not from any energy or anything else
and even from optical quantities too

i.e. it is enough to simply work out
system of action
the correct reaction system is obtained
a system of correct positioning or something
some such school may be, so to speak, even management

here is a whole school in general
because that's what happens there
that a completely basic course is needed
to develop this management system

Well, everyone produces their own
depending on the quantity there for example lectures
according to my Teaching

can develop its own system, some kind of basic one

or use the standard ones
which I declare as standard

and it turns out as soon as you develop
this system
and translate it to the Macro level

i.e. you take this generally standard system
translate
actually well or what, are you "throwing" it out onto the Macroplane ?
then here comes the unification of already complex management

this is management
With soul
In Spirit
Consciousness
and dynamic systems
almost everything turns into a solution to your problems

i.e. this Infinity
turns into
just for everything, well , actually, in solving problems
i.e. this is actually a solution

i.e. you bring the control of Infinity
to solving problems

This is where I end today's seminar.

Thank you very much for your attention
