

GRIGORY GRABOVOY
The Teaching about God
The joy of knowledge
20.09.2005

Hello again
the topic of my seminar today
this is my Teaching about God
The joy of knowledge

in this topic i show
how through the structure of joy
which exists in the system of knowledge
in normal management practice
also add a system for achieving results

because the structure of joy
this is the result obtained

i.e. when a person experiences joy
in the structure of knowledge
where there is an action, *for example*, implementation, *yes*
some desire or acquisition of knowledge
we gain knowledge about the future result

here is the result in principle that could be
or a person gets a result from an action
specific
and this is the joy of what he sees
the joy of knowing that the result has happened

or is it knowledge as such?

This is when we begin to realize the inner level
i.e. why from knowledge *for example* in a person
there is a concept of "joy"

then we can consider the Action of God
when He is originally the Creator of the whole World
felt, *for example*, primary joy

you need to look here
what then is joy for God
the one that is, *for example*, for a person
precisely the joy of knowledge

God is the Creator of any system of knowledge
what joy then does He experience yes

what is joy itself for Him
Well, well as if some substrate of joy what then
here it is revealed as the very Action of God

and here in this structure
The Physical Body of the One God
just like the physical body of a person
they have a similar structure in the action of joy

i.e. the body as a radiator of joy
like some element that just radiates and that's it
no matter what happens around, this structure exists

for God is His own
from the point of view of human logic
to appoint joy as if and could not yes
he must have something static

and it turns out that this is the source of joy
is a physical body
therefore, acting there by analogy
how god works
man in knowledge for example Infinite development of the body
in general in the knowledge of the action of the body in the reaction of the
body
can see joy
as an external value coming from God

God has this Action proceeding from the Body
a person receives information
can be a joy coming to the body
i.e. it turns out we see contact
between the Body of God
and the human body

and in the structure of knowledge the result is achieved by
what in general is well, the structure of so to speak joy
happiness so to speak of a person in action
this is a very important element in management
often it is the main one

an element that allows a person
work for example there without getting tired

allows you to work towards some ultimate goal

but there is still a structure here that is essentially the same
which is precisely Eternity

here is the primary wave of Eternity, this is also joy

and when we start to dock

Well, what does the element of knowledge give us there?

a person does something

he is happy because he did something yes

and then when the structure of Eternity

i.e. the structure of Eternity interacts

with human Consciousness

then we get that Eternity is a concrete matter

it is found in this system

as a matter that is connected to the level

and the physical body of a person in principle first of all

and there with the Consciousness of man

and expressed as joy

from the fact that there is interaction with Eternity

i.e. at the first level of action

exactly into Infinity yes into Infinity

as God does

this is interaction

with precisely the structure with the matter of Eternity

which is expressed precisely by the structure of joy

i.e. how is it even possible

the matter of Eternity there let's say we touch it there

if I put it this way here

how can you use it there , for example ?

in the form of a material environment

then the simplest element

this is a skill in this matter

precisely to express the structure of joy

i.e. the ability to see that joy exists, too

this matter

the matter of Eternity possesses

exactly this vibration of joy

this is matter itself as well

i.e. it means that Eternity , so to speak, is configured like this
what we can do on an emotional level
express it in words in some aspect of action

there is simply Eternity
there is joy derived from action

and that's when we come together in action
one thing is just action

it's another matter when it connects with the action
there is your reaction for example
joy is also matter and a property of matter

then we see that inside these, as it were, all systems
there is a very important element in the system of knowledge
which says that we need to avoid, for example
a person needs to avoid
let's assume there is despondency there
he must work
in the system of precisely joyful feelings, joyful sensations, etc.

because in principle in the structure of the work
here is the system of human self-regeneration
it is still a structure of joy
from the presence of a physical body somewhere there yes
from the presence of the element of Consciousness in something
this is also an element of joy

often this means it can be expressed like this
what is the main criterion
Body work norms
Norms of Consciousness
this is the structure of joy
which the physical body receives there
or Consciousness receives

then it turns out that we, well in general we can identify here
such management structures
like for example there is Norma zhizni
there's just a good mood there, etc.

but I still introduced joy management
i.e. the exclusion of , for example, despondency in action

and if we go deeper

in the structure exactly why we need to do this
Well, in the end, one can logically assume so
what to manage there without really caring about it
that we are considering this well as if to the side
or is there no joy, for example happiness

but when we start to go deeper
at the root, as it were
and at the same time there in the peripheral sense
phenomena of life phenomena generally speaking of any environment
any world

then it is precisely the structure of the introduced joy as such, yes
for example, there you can logically take and rejoice at something
choosing an object of joy

and the structure of real existing joy
in these systems
these are two well as if bearing forces
where exactly is the real joy
this is a very serious force in action
and in the Infinite and in the finite

here knowledge itself is regulated by that
what has an effect there
there is a current understanding of the situation
and also has the effect of Infinite level of control

so it turns out that a person when he wants
for example, restructure the world
i.e. to reverse some structure of events
Well, naturally in a creative way
so that the World would bend in his direction, yes
configured and the events became the same
especially in difficult situations

the reference level is
the first impulse of joy
which becomes both Infinite and human there
acquires the properties of the human body

i.e. the properties of the human body
in this case it is the level that is expressed in that
what is a vector or a ray of joy
so it kind of creates the structure of the human body

it turns out that we have some kind of material , yes
construction of the human body in this technology
where is joy i.e. the ability to rejoice there yes
there to the neighbor
To God
the structure of the World in general
so this is actually the construction of physical bodies there, for example Yes
in a more general aspect

i.e. at the level of some axioms of socialized connections
it is the ability to build any body
and also has its own
this is the level where joy seems to connect
becomes a collegial collective

then it turns out that we have

a fairly clear structure for constructing events
where the element of precision
is the presence of , well, actually, joy
in any interval of action

while the action itself
may be out of phase as if control
and even impacts

i.e. in fact we are growing an event
at the level of simply joyful systems of some kind

Well, if you think about it
how does God grow primary human tissue anyway

then it turns out that He
He doesn't grow what's there.
is there some external tool

and the tissue just seems to grow there as a person grows
or if regeneration
then it just grows in this place where it should be

and here is an element of this growth
is the presence of a certain building material
some such level of platform

and this is the level of the platform that joy is

if we take for example

and now we begin with the human body
Well, in some direction there should be control
look at what's around

then we see that at the control level in Infinity
First of all, we see the structure of joy
but joy does exist in principle
near the human body

in this case it is Infinity
this is an applied element after all
this is action

and if from the human body
it means to go in the direction of the Endless events there
there is Eternity
some even sometimes final but bright events

it turns out that it is precisely the structure of Joy

this is what the human body perceives in this case

then it turns out that we can very simply
enter well through joy it turns out yes
into the human body for the purpose of improving its health
i.e. it's easy to regulate
some areas there are levels of the body
for this you just need an entry trajectory
precisely through joy

and we can through the structure of knowledge
make changes in this World of a radical type
i.e. to change what seemed to have already been accomplished
For example there is a resurrection there is a general resurrection
some elements of change of control
what does impossible death mean
that you can for example shift
there is any unfavorable event and this is done yes

It's better not to enter there, of course
into the system of negative events
but you always need to know that you can always move everything

and then it turns out that based on this
you can basically continue to act
absolutely well as if similar to that
what's going on in general as if in ordinary life

There people lead a normal life

but they operate at the level of some kind of supporting platform
the one that is called

joy in action ^{yes}
joy in knowledge

and go out through this structure
to the level of interaction
from joy to the structure of events
and then you start to act
at the level of Infinite magnitude

and why is it manifested here?
it is the structure of joy
because it is well known
that when there is joy it ^{kind of} spills out
has an Infinite contour at once

i.e. joy quickly turns into Reality

a person who is happy about something

Well, he doesn't really consider it
some process often even as local
joy it can be universal

or is there personal joy?
I also want to share there
it is, ^{in general,} a completely open system

then it turns out that this is the concept
as "the joy of knowledge" simply "joy" as such
is of considerable importance
in the control system

and ^{well,} from the point of view of some kind of complex there
so let's say if we take a sublevel of ^{action yes}
for example, we make management
^{well, for example,} in terms of constructing a verbal principle of control

i.e. we decided to build some word there
and decided
in structure, an elementary action in constructing a word
decided to consider
how does the configuration of sound forms go

i.e., having considered the construction of the word system, let us assume
at the level there is action
you can see that under the action of construction
we can clearly see an external, as it were, alternative system
still counter actions yes

i.e. there is an action, there is a counter-action
how to make the counter action neutral
i.e. there is a level where there is powerful joy
it takes the counter action far away
also one of the aspects of management

what needs to be done
so that there is no counter-control at the logical level
Well there to rejoice there about something powerfully violently
and the opponent, for example, in counter-control will run out there, yes
or will move away for a while

i.e. the management structure is expressed in that
that under the influence of joy, joy itself is perceived
and you can only take a joyful feeling from there
enter into the control system
everything is standardized

here is a simple control system

are there any problems
took introduced the structure of joy
and in principle it means if it can be like that right away
that management is being accomplished
at the level that you actually carried out the management
which in general are negative systems
it just took me aside

and then you can see
how to configure in this case
the structure of a person on the system of joy
where there is a logical control phase
there is joy that is
on a logical level there well as if reproducible
where you can build management in terms of that
as we suppose it is possible to somehow limit it there
regulate such a concept as "joy"

although in principle it is considered
that it is so not always a controlled concept

and here we see that in order to build already there
the structure of your own body ^{yes}
some local systems
build there a level of reproduction of words of action

i.e. there are ordinary words
there are action words there
there is action first
then words

and here is precisely the construction
takes into account that joy can be universal
i.e. at the local level of a person
in one cell
maybe it's the level of general joy
i.e. the joy of the whole world

then it turns out that in this case we
we begin to clearly see the contours of a person
you just have to feel the universality
the outline of a person is immediately clearly visible

and then it turns out that the outside world
which exists
in relation to the human body, ^{for example}
how ^{so} as if it were like the external environment means
although, ^{for example}, there the air is also internal
a man inhales air

this means that the outside world in this case becomes like this
that the contours of a person begin to stand out clearly
in the structure of precisely joyful external events

i.e. a person gains experience
positive level of management ^{yes}
in this system

then it turns out that for that
so that a person, ^{for example}, to cure ^{there}
it should be done this way
so that he has every next control
was like this
so that he doesn't get tired there and experiences joyful feelings there
or at least there are calm and normal people there
and calmly studied
^{as if the} next level of management
developed

then it turns out that if we
let's set such a task as a task of action
then it is clear that it is as if in an integral characteristic or something
joint action
we can also set the task of solving the problems of all people
who are present there in management
through the structure of precisely joyful events

i.e. through the structure of achievement
some one event there
well, which is supposedly done by a group of people

and then it turns out
that already the internal structure of self-construction for example Yes
alignment of some functions of the body, etc.
this is what you are in the completed action
in the future tense
act on the current

here is the technology
that in order to most effectively help yourself
a person should then in this case
from his real future
project control onto yourself all the time
i.e. how to build the next path
which may actually be the case
that it is tied to the development system, so to speak, of the situation
which already exists in the future

then it turns out that based on this

if there is a person there, for example, who is very tired
he needs to do some management
by itself, as if by organization, yes

here it turns out that we can have
well, in fact, such an element of knowledge

that element for example of human joy
which is expressed in the form of achieving the goal
this element it starts working here
how is it a discrete phase of cognition

i.e. from God's point of view
for Him any element in knowledge
it's Himself

and it turns out that if we consider
such a position
then we must see our own presence
at any level of management and external management

the joy of knowledge
the joy of governance structure
should see how we send to ourselves
this impulse

if we need to restore the body structure there
then we must clearly know see there represent
how does the body even exist
in Infinite time reacts
there for the whole Reality there
from a specific cell of the body
in the form of interaction
of this cell
with all systems of Reality

and then we see that with such technology
we can already arrange the structure of joy
Well as if in a neutral form
in the form of information, for example ,
and make it a platform
for a certain level of informative, so to speak, control

i.e. here joy is
turns out to be a platform for action
i.e. the action is happening
outside the system, well, some kind of one platform
but if you look further
then the system of joy exists as if from the very beginning

and it doesn't go away

i.e. it is impossible to take the structure there and work it out
call it "information of joy"
leave in some place

there is already such a concept as "information of Love"
or there as "Love itself"
information of Love is different from Love itself

there is information
and there is Love itself, for example Yes

if we start here

it means to work with this concept in the same way
i.e. there is, for example let's say "information about joy"
there is "joy itself" there
then you can see that in the structure of the word
in the structure of real concepts there
there is a system of internal as if well, such penetrations
one element to another element of the same type

and here a level of internal state arises
where the concept itself is there
or there is some kind of Perception of this concept
it turns out that those structures
which work well as if independently

i.e. we can consider

for example, some object of Reality
there is a sphere
and is it possible to have there, for example, just information about the sphere

if we take this information about the sphere
and we introduce it into the real sphere there
but we do it at the level of Thinking
considering that the real sphere of management
well it corresponds to some static object
For example there is a building

then you can see that any element in Reality
generates or creates in principle
any other element
well except for humans

i.e. this is the level of interaction
if we are talking about an element
it is connected with what can be clearly studied
how the structure of external Reality is created

through the structure of this level of knowledge
as for example for a person
joy

when we start to see this element in action
i.e. we begin to see
what do systems mean

which turn out to be self-reproducing

if they are positioned correctly

any point in the world can self-heal
then you can see
what is your personal for example Perception
it has a certain level of next action

that there Perception is protected
there is some level of some kind of protection
but for the Perception to be like this
what does Perception mean there, for example, controls
some processes of Consciousness are complex

there needs to be one here
it is the joy of knowledge, the joy of action
there is joy even in control
for some complicated events

and then it turns out that we are coming from joy
we just set the task of joy
there is some achievement of some task
We may not go deep into technology
and just get an impulse from the fact that you
some action was carried out
and received a reverse impulse that the action passed

but since in management it is always necessary to be clear
everything should be considered at every level of management
it turns out that this is the concept of that
what kind of action for example it ended there or passed

we must see this aspect
what development well as if in Infinite time
for example, yes, a person
structures of some concepts there
it is such that we must define very clearly
the structure of the current position of a person
there in space and time
and so as not to complicate this management

then we should see clearly
how does a person reproduce
at the same time as the whole world

here from the point of view of control logic
so God He reproduced at the same time

with the whole world
including all future tenses

then a person can in the current time
reproduce
as if yes, synchronously with some elements of the World

and it turns out that then we have
very clear algorithm
what does this person need to do
well there add to improve his health somehow
or there to make life happier make it Infinite

if we consider this point of view
that a person changes, so to speak
not at the level of appearance
but precisely in the structure of interaction with information
in the structure for example there is Infinite development

and if we consider
this is how this process of modification occurs yes
in the space of this control
there in difficult cases when there is some aggressive side
then the modification has a limited contour
until some point

if the party there does not work aggressively
it turns out that the control of this synchronization
where control is given to an external control object
so it actually happens
at the level means Well in general, human perception and connections
with the entire external and internal environment

for example, you have a task
differentiate the structure of action
well at the level for example so let's say your actions
at the level of external analytics

then it turns out that you can enter here
into the internal structure of a person
or make it so that a person begins to understand
for example, there are all aspects of Reality in essence
there in Macroaction

and then it turns out that you
here in the structure of the joy of knowledge
in the joy of action

identified an element that is

Well as if it were some kind of self-propelled control element
self-developing

which means which means

that at any level well in fact, there is no external action there
you got when joy

So you have done the action

i.e. joy as a criterion of a perfect action

even in general often different

not associated with primary joy

received there with information yes

and then we begin to see

what is in the structure of human Consciousness

nevertheless, this moment is very clearly shown here

what you often need to be able to do is to build a structure

there is no Consciousness of one's own

own action

organism

depending on what tasks there are

then it turns out that in this case

this is the joy of knowledge

it is focused primarily on the person himself

and this is how this control system works

what do we have in the structure of knowledge

in fact, in general, this is the status of management

what are you starting to see

that time has an Infinite value already now

here is the joy of knowledge, it is such a fast value

but in relation to this value

it is clear that there is a kind of time

internal time external time of a person

collegial time of man

and in this system you can see

that the primary element was laid down

as the structure of the universal Eternal knowledge

and this is, in general, the original and hidden joy

when we begin to see

Well as if in the history of the development of such management

as a structure of joy in action or in management

we basically have to clearly understand here
that a person has
are a lot of earlier problems there, often sometimes
which periodically or pop up
or on the contrary, they are no longer there, yes

but nevertheless there is some list
which implies
that through the structure of the joy of knowledge
all the elements that surround a person are possible
review and translate
in the structure for example there are actions there yes

i.e. this means we are considering belonging
well that point of view of a person to some elements
we immediately transfer into action

i.e. we can say here
what is the structure of the joy of knowledge
it means what a person strives for all the time
This structure leads to analysis
in certain information systems
to what it means the structure changes
both internal and external levels of management

and here is the concept of "organization of the verbal level"
it begins to vary to the level of rigid systems
and to the level of such as
Well as if unbalanced control systems

and here this aspect of action arises
what if we consider
for example, the action there is infinitely distant from a person

then here is the system of joy of knowledge
it's primarily what you do then
in relation to their personal tasks

then it turns out
that the more we experience the joy of there knowledge in action
in the natural level of joy of knowledge
and not in some artificial version
the faster we adapt
as if to any situations that happen to a person

this is joy
as a system for example of internal diagnostic control

and the system is simultaneously, as it were, an external correction
for situations

using for example there are people there
with the help of some systems there of Salvation or there of action

and it turns out that from God's point of view
human action

well, there is a certain joy of knowledge

in the joy of action

this is just an achievement

Divine Primary Level

physical body precisely in Eternal life

and from God's point of view it turns out that way
that the reproduction of joy in knowledge in action

this is a special element requiring

some special reaction in management

i.e. it turns out that we can, as it were,

well, specifically enter such an element or does it exist there

and now if we consider

for example, as God does

from the point of view of the Eternal development of people

Eternal life of people

in the system of such an endless action of joy

there are actions of knowledge

then it is clear that there is real implementation going on here
any element

for a person who found himself in these conditions

but at the same time the person is completely free

i.e. there are no restrictions there

i.e. joy in action, joy in knowledge leads to that

that at the level of, so to speak, legislative systems

there is a reaction norm yes

on such types on such levels of events there

and further if we start

social aspect raise watch

that for example there we have the joy of awareness

joy of consciousness joy of action

can bring

because the concept of "joy"

you can also distribute it there for example
for example, on the concept of "joy of the physical body" Yes

then we see that any even very old events there
which happened there maybe even a very long time ago

they can be restored through the structure of joy
exactly, well, there is a specific person
or some specific event

i.e. the concept of "remembering" or "memory"
also the level of joy
under good conditions near this body
this joy as if due to external control

it turns out that if we start to sort of analyze
what do we need in order to manage
was, let's say, highly effective in a short time
especially if there are complex control systems
there is responsibility for nuclear power plants, etc.

then it turns out that there is something here
this is precisely the element of direct vision
which is not connected there in any way
with the element suppose there 's even joy in action
i.e. this is an element of completely direct vision
at a certain level of management

and then joy turns out to be reproduction again
as if of an intellectual plan in this system

it turns out that if we decided there, for example,
there, as if to rejoice at some element
Well, at some point it's everyone's personal business
and he kind of misses this joy

if he starts to rejoice technologically yes
introduce the joy of knowledge
so that a person can reach levels
which in principle in the usual way
practically unattainable

the level of joy is the level
well, it's enough to have a punchy action
personal aspect of action
for example, share joy there
a person begins to share frequently [...]

Well as one might sometimes ask in this case
when he shares well why does he do it yes

and if we start looking here
that in principle, in essence, we are dealing with the same thing
what joy as for example construction yes
such as there is a material that builds

Human consciousness
or is there a human body

then here we see
that the system is like well, information transfer
there in the Infinite Future
when the system of action is defined there often
and the primary principle and the Infinitely Remote

it is manifested here precisely in the system of joy
in the form of such, so to speak, spectral quantities

i.e. this is an action and from the structure of joy
where the action is known
it is possible to construct an action in general
and get joy as a manageable quantity

and here is the construction of some information there
around the joy system
this is a special task

It's not for nothing that I naturally showed it here
what we deal with often
with the system, so to speak, actions
where element is not defined
i.e. we are forced to create the element from the very beginning yes
in management

i.e. well, we decided, for example, to create there
some level of control in this way
so that it would be implemented as if for all systems

then this is the control
so from the point of view of logic
always remains as a management level
if we do this

and on the other hand, this level of movement, let 's say,

matter or some energy
up to management level
it is still a structure of joy
expressed as a level there well as such yes
then management takes place and everything is implemented there

if it means bringing in a level of external control here
it turns out that the structure of joy is like this
what can we mean For example there to build a physical body yes
based on this system of joy

and then we can see very clearly
where does the problem come from?
in a person
i.e. why does he, for example, do this or that action
well, it doesn't do it the way it should, yes, sometimes

i.e. what is the system of internal interaction there?
so to speak, it is broken

and it turns out that if we look
what for Infinite for example yes to life
we need to introduce a system of Macro-rescue there
Macro management
give universal joy there

and if we consider management further
from the point of view of local systems , for example
then we assume the construction of our own physical matter
in management
this is often a specific input of the joy system yes
into the cellular structure
or there is a construction, well as if in that place
where there was no talk about any cellular control systems

that's why I say that it is advisable to learn how to manage
as if from the point of view of external objects

i.e. we should try not to do such things
so that the control was well as if there dependent
from some external systems
we need to try to make the management like this
to have full control over the management system
was absolutely clear there balanced

and here it turns out that it is precisely the system of joy

allows us to establish this balance
because at the level of joy in knowledge
we see that each element
is responsible for some specific value

and therefore when control is applied
precisely the joys of knowledge
then this is the management that is practically
Well, for any person, first of all, it is very developed

anyone can experience joy
from some information
there is of course a positive effect from knowledge

and then it turns out that if we have
such a matching mechanism as such
expressed in the form of some kind of ideological postulate
and brought to implementation

we see that here is the very concept of the "joy of knowledge"
or the very concept of "joy of action" is like that
that we can work in the system all the time
as if the initial forms of information

joy as a beginning yes
a person for example there is something he is happy about

here is the initial form of information
when we start to consider
This is precisely the concept of "joy"

so it practically allows you to decide
Well, let's just say that many questions are just because
what as if Well, that's the initial form itself
already contains in the information
causal forms of information
contains a solution as if concluded
inside the primary impulse of this form

and then it turns out that we can
this impulse to output
i.e. what I am telling
it's more about specific management there
at the level of viewing systems there yes
what i see in management is what people see

and so if we start to sort of move on
into the structure of already material systems
It is important here that the transfer is into this structure
was connected with the fact that a person, for example, I saw it there
at the level of physical Reality

and not, for example, some future plans
they can of course be considered
but it is precisely the transition through the system of joy
where there are no defined concepts often means such
Well or something recorded in a different understanding
except there is a joy system

then this element should be like this in the transition
what we must see clearly
that in management let's say we need to add yes
what level in terms of joy

there is still some improvement to be made there
what level does not require the concept of "joy" there
but it just has to be neutral

and here it turns out we can add
in the system of this control
a peculiar context related to that
what influences, for example, when we are there in the regional plan
there in some local management plan
we make the system of joy as a control system

what happens then
as a general means of transmitting information
serves
when working with such technology

because with such a level of widespread distribution
technologies of joy, for example, the joy of knowledge
People in general already know how to know
know that there is joy of knowledge
we are just starting to work technologically
in the internal system of this concept

i.e. how should we mean
to enter the system of joy, for example, by logical means
see what it's like
structure means Well, material, I guess
here after there is an application of the joy system
a certain transcription, etc.

when we begin to see
that this system of joy of knowledge
fairly generalized description
in management

it has different functions there with different criteria
then it's logically clear
what is joy as joy expressing
what to do for this, it would seem

but it is precisely the internal management structure
when you start to see the connections
so it allows you to make such a control
that every next step in management
it becomes almost like a calculated step

and then here is the system level of management
it consists of many things
often still at the internal level

which exists in humans

system level of management is that
what a person may not touch, for example , there
Well as if in terms of technology
development of some events

and then it turns out that the concept
"the joy of knowledge" "the joy of action"
this is the level that implies
that in the future this action will happen anyway
although that may be the final action there

i.e. the joy of knowledge from one person
can be transmitted to a group of people there
and it turns out that they are all the more effective
for example, there is the structure of Eternal Development

and from this we see
that is like a fundamental aspect or something
the structure of knowledge there are joys of knowledge
this is generally the level of control action
what we can do in this action means to conduct
well, some kind of analytics
well, to carry out some event constructions

and with all this we will constantly be
in the system means Well let's say possible transfer of information
in the system of near-informational action
in the system, in principle, of informative action too

and so it turns out that then we start working
in the system there is near-informational action

i.e. some level of control occurs
i.e. a kind of layer of control occurs
what are you doing what do you think?
that there is some kind of control angle
then in the near-informational action
you translate this action
well, in the structure of more complex or less complex concepts

here it turns out we see
what can be tried means to see
the root of all events
and in the structure of the joy of knowledge
it is this root, well, the event root
it turns out that it practically reveals
control system

when you use it for example
some level of postulating tasks

i.e. for example there is a task to work through joy and knowledge
work through the joy of knowledge

there is a task through some other action element
you start trying to work there
through another action element

then it turns out that based on this
like the primary status is like this
that there must be some
Well it means a completely free, natural point of view
some kind of unified point
which allows you to change the focus in action

then it turns out that this free external point
it is also the physical body of a person
where we get the opportunity
change configuration in action there

on the one hand it is the joy of knowledge

on the other hand it is a neutral system

and here in the physical body this is the point of Eternity
which reproduces the structure

there external there deep
the future of physical space

Now if we start to study this action
and try for example in this action

Well, let's say we see

how do we have for example at the current time there
there is a reaction to the action

how can we suppose to build
the action we need in management

i.e. for example we need to build
there is some specific characteristic
the actions of a specific person there

and then the question arises
what comes to him to this person
in the form of some kind of problem
in the form of some kind of external action
or impact

these systems should be somehow correlated
in that a person builds himself there
and in what he receives there in the form of information

and that's when we start to see
that a person can, in principle, be quite simple
build
for this you need to devote some time

then this is the joy of knowledge
there is joy of action
it means the situation is actually moving
into the reproduction system of the physical body there
in the structure of future events

i.e. joy as a platform
for the reproduction of the physical body

because as I said it means
it is in the structure of joy

primary level identified
namely the actions of the body
and Perceptions

so it turns out that if we
using such a generally quite simple concept
we are starting to enter the control system
means Endless events

think about what a person needs to understand then
from the point of view of the Infinite level of action

then here it turns out
that this is precisely the structure of the joy of knowledge
structure of action through joy
This is the system that allows you to combine
there for example yes Infinite future
Endless past
and be able to reproduce
real time current system

i.e. it is possible , for example , there in real time
there is some kind of lecture course, for example, to tell
at the same time, save the nuclear power plant there, etc.
do many jobs at once

and so it means that the joy of knowledge allows
to single out one substance in management
then it turns out that we can

it is this substance that is in control
it is this substance that should be used as the only one
which well reaches

and then carry out management without making mistakes
as if through only one channel of action

and when you start well means to do
actually, here is the analysis of this process

it turns out that analytics itself is like that
what from God's point of view
for example, knowledge is the original joy

then from a human point of view there is an element of docking
where is the knowledge of a person for example
well, in general there and around the world

knowledge of God
and knowledge God himself is the Creator of His knowledge

any element of knowledge is that joy
which exists practically everywhere
but it also exists specifically as I said
in the structure of the initial level of reproduction
namely the physical body

so it turns out that if we are in control
we use
completely different systems but at the same time we clearly understand
that the physical body is organized, among other things
on the joy of action and on the joy of knowledge

then any information is the same as what corresponds
namely Perception from the body
and so it turns out the body is well, clearly understood
that the body is then Eternal
because all external information
this is the joy of knowing both your and the physical body

then it turns out to be enough
this structure in management for example to know
and then you can talk quite a lot
on different aspects of action
according to different aspects of the action there is joy as such yes
joys of knowledge joys of development

but the basic structure
highlighted in the form of Eternal Life there
there is a physical body of a person

where joy is shown

shows quite clearly
the objective form of existence of this process
and there is no explanation there
may not be used
if you clearly consider
your own position there
in the joy of life, action and knowledge

and then it turns out that the substrate itself is like an action yes
it's just that, in the prognostic version
optimal action
this is what leads to that

that through the structure of joy
we already receive the concrete substance of Eternity
which can be regulated there, distributed further, etc.

and then receive Eternal development
there locally in a specific organ for example Yes
throughout the body
here through the structure of the joy of knowledge
you can do all this very clearly

and as I said
descriptive model here if you pay attention
descriptive model
it is built in this level of the seminar
very much like more
from the point of view of the identified direction
from an ideological point of view
in terms of more different aspects of Perception yes
elements of joy elements of action

and the more we perceive
in different systems in different plans
means leaving control more or constantly for yourself
the more precisely we get the concept of "universal joy"
this means it is already an element of universal life

and pay attention
the element of joy as such
it is often difficult to describe there
in a one-dimensional coordinate system or something
process yes

therefore translating the universal joy
into specific matters
to specific points of the body

we already see absolutely harmonious development there
in all systems

and yet with all this we see
that joy as such exists
there are approximations to the concept of "love"
and it is generally unchanged

there is a lot to say
you can build many management concepts

but the revelation of the True system itself
this is management
this is the Eternity of the physical body

these are just some aspects
which were said
about the system of control through joy
work locally on each aspect
make your own methodologies
look how thoughts and words can move
near this concept

and the main thing is then you will see
namely, his Eternal body
through joy

then it turns out you have already committed
as if dynamically static control
those. reached the goal

through joy
go out to the Eternal your physical body
then you achieve the goal

This is where I end today's seminar.

Thank you very much for your attention

[work preferably with this seminar
more on sound systems
i.e. more on the use of the dynamics of the word " joy"

wherever it may be
you can turn it over and twist it there
try to make it arbitrary

there are some logical meanings there
well, to identify illogical meanings there
it is in management

but work more with the word

and the more you get used to the word
the faster you see Eternity clearly

[of one's own physical body]
