

GRIGORY GRABOVOY
The Teaching about God
Knowledge Management
23.12.2004

Hello again
the topic of my seminar today
this is my Teaching about God
Knowledge Management

in this topic i show
how does human knowledge
or knowledge as such and in general
can be controlled
at the expense of, for example, there are Macro Salvation tasks
Macroregulations
or there are achievements of managing private tasks

and in connection with this the concept of "managing private tasks"
here it comes down to the fact that the management tasks themselves
they can be generally speaking
Well, basically, that's it For example there in the Soul of man
separated
at the level of let's assume there is no lack of knowledge there
about management or about some action
and to the action where knowledge exists

i.e. as if formally exists
a fairly clear boundary
where there seems to be a lack of knowledge
and where are they for example yes

then it turns out that when we mean
We are putting emphasis on that
that there is knowledge, for example, on management
in some system or situation
then we see the person's personality
which, well, solves some problem
i.e., in principle, we compare knowledge with a person
all the time

and if we, for example, want to do further management
from the point of view of what
what does "lack of knowledge" actually mean?
how does this concept relate to anything

with a person

then from God's point of view, for example
it is clear in this case in my Teaching about God
we have it after all
that God always has absolute knowledge by essence
and to a particular case, for example Yes
and to some global

it turns out that the task of knowledge management
this is a task of formation

Well, first of all, general knowledge, for example Yes
knowledge of Salvation knowledge of Eternal development
and at the same time still private knowledge
where is the concept of "lack of knowledge"
well, some area where for example there is no
any information content for action

here this area it can be different
for example, in the treatment of diseases
It is often useful that there is no information about the disease
i.e. it turns out that there is no information at all
then there is no and in fact there is no knowledge
i.e. this is, in general, a positive control mechanism
in this case
from the point of view of treatment

and often for complex systemic diseases
sometimes it is enough to remove control
it is the lack of information about the diagnosis
and in general healing occurs

it turns out from God's point of view
when we, for example, make management for Infinite development
then here is the concept of "lack of knowledge"
it is often a platform of some kind
which exists here
in the structure of the optical development of knowledge itself

i.e. well for example the golden thread of knowledge
it means it is developing somewhere into the Infinite Future
in Eternal Development
and at the same time external information
it characterizes the level of absence
at one of the management levels
i.e. it is precisely the absence of some information yes

and from this point of view
knowledge management is a level
as obtaining knowledge as such about the external field
where knowledge seems to not exist

i.e. a person, for example, can count
that for example there is no knowledge somewhere
purely logical such an abstract model

but really
a person in himself is already knowledge yes
about myself first
it means somewhere inside a person
namely in the Soul
where the Soul intersects
with the Spirit of man
with the physical body of a person
knowledge does exist after all
as the level is exactly greater than Infinite development

i.e. knowledge is in that
what can a person do there For example
determine the structure of Thinking yes
i.e. thought is under the control of a person
he can do some actions

and in connection with this there is a certain knowledge generator
which is inside a person
and which seems to reproduce
develops into the external environment

and here the next element appears
that knowledge comes from a person
as if from within a person into an external system
intersect with knowledge of the outside world
but the man himself
but as if from some other area yes

i.e. the person gains control
from an area where knowledge is absent

for example, the control level is born
as if in a completely uninformed area
i.e. we can trace the optical level of movement
but at this level there is no knowledge about the process

that's if we start working
at the level of finite optical values
in management
then it turns out that the optical magnitude
it practically has the status of a sort
Well, there is no endless development in that
that the optics it has and the level of luminescence

i.e. Infinite level is control

but it's the beginning of the optical level
Well for example in Human Perception
optics expresses some action
the man there went to the store
did for example there is Macrosalvation
or did some detailed action there as follows

it turns out that Perception is some kind of spheres
Often there may be optical threads, etc.
but this thread is like
somewhere it starts
somewhere for example it ends
this is some local segment of the action

and it starts as if from nowhere
from the point of view of external information
i.e. at a level where knowledge is basically absent

because of lack of knowledge
this is also a mechanism of separation
the mechanism of differentiation there
i.e. knowledge about a specific process

i.e. there may be some other knowledge nearby
but which do not relate to this process
i.e. any other knowledge
formally and actually means
in general like a platform on which it is located
as if the following knowledge and any other

i.e. it turns out that the following Law is derived here
that the so-called uninformed environment
or there is a level of lack of knowledge
about the current process
well maybe not all of them, but some targeted ones Yes
still creates in the control space

some other knowledge
well, maybe not related to this process

and it turns out that purely logically we have deduced
that this could be a third knowledge about some other processes
here it turns out that there is an element of some kind of ignorance
it is still knowledge, but of a different kind
logically it is clear

and from God's point of view
God creates knowledge on his own

at any point in space-time
so it turns out that He creates
It is precisely the infinite amount of knowledge that is obtained

and these levels of knowledge they actually form
as if the space of the next level of management
where is the Spirit of man and the Spirit of God
so they merge
at the level of precisely Infinite action, and such
that the Spirit of man begins to participate
in the structure of the realization of one's own Soul
i.e. the Spirit becomes the knowing Spirit

This is where it is important to note
what exactly is the connection
The spirit of man
and the Spirit of God
they show these phenomena in principle
it is the status of, so to speak, Infinite development
which a person has from the seemingly Infinite future
to yourself

i.e. it turns out that it is precisely the concept of the "Spirit of Man"
carries the synthesis of the connection of the level of knowledge
and the level of, as it were, lack of knowledge or other knowledge

i.e. the Spiritual level is a level
which actually contains
the status of all Infinite development
and at the same time, knowledge as such, for example Yes
there is no allocated area

here the Spirit is a monolithic system
which knows and contains in itself
knowledge space

i.e. there is no separation of the factor of knowledge from ignorance

The spirit is all-knowing ^{yes}
ultra-fast development management system
leads to the interaction of fast systems
translates to knowledge about these systems as well
i.e. it is an autonomous system of functioning of Reality

it turns out that from the point of view of the Soul of a person
The soul perceives the development of the Spirit
and contributes , for example, to the structure of Infinite Development
while being ^{as if} at this level
from the point of view of knowledge

here is how to get accurate knowledge about the Spirit ^{yes}
the state of the human Spirit
^{well,} the state of the Spirit
a value that is understandable enough for a person
and there seem to be no problems
this knowledge is in us continuously

so that's when we look at
it is interaction
^{for example} the Spirit of man
with its Infinite development
then we get this projection of Infinite development
on the Soul of man
precisely to the level of knowledge
gives the physical body of a person ^{for example}

i.e. it turns out that God ^{projected , as it were} Yes
created man as ^{actually} knowing
all processes of world development ^{there}
and for a person
^{means} personally determining management
these processes happen ^{as if} for him

i.e. the world develops for a person quite individually
if we want to understand
Is it possible to influence this development of the World?
i.e. well, we want to get knowledge about Macro influence, ^{yes}

then from the point of view of Infinite development yes it is possible
provided that he still accepts
i.e. it must be infinite development
on logic to accept independently

and this must be a personal, strong-willed decision of the person

and when it turns out that if, for example, we are considering
management process

For example yes, like an infinitely distant process

by management objective

for example, a person should live forever

and he lives forever already now

but Eternity is still quite prolonged

i.e., so to speak, an infinitely developed management goal

and here it turns out

that it is precisely the management of knowledge about Eternal development

this is the Eternal development itself as such

including the current process

i.e. knowledge is a monolith that allows you to include

the path and the realization of this path

make objective

this process

i.e. it turns out that the path itself is the implementation

This is an objective control system.

example, to cure a complex disease

it is often necessary to make sure that knowledge about healing

so they sort of tore off the problem itself, yes

from the knowledge itself, in general

i.e. it is necessary to somehow be able to tear off the diagnosis knowing it

i.e. there is a problem, there is a diagnosis

we must know the diagnosis

how to remove it from the control area

and get the area of absence of such this type of knowledge

about this process

and then we actually kind of tear it out by the roots

structure of the disease for example

and formally we contribute

structure simply Norms

and that's all

i.e. on the one hand we highlight

namely, some unstructured system

the one that determines, for example, the diagnosis

or just enter the Norm

i.e. we can actually consider this process
in this case it's different

i.e. either we, for example, normalize space
where the concept of "knowledge" is a component of this Norm
or do we still work with target knowledge?

therefore the concept of "Norm" has
that means in almost all directions
well, the same type of projections of action

i.e. the norm has the property
be the norm almost everywhere

i.e. there is some concept there For example there is "absolute Norm"
then it turns out that the Norm that exists , for example,
well in the field of management
it is such that you can very well mean to think in this way

that here is a standardized management , for example , coming from God
i.e. God as the standard of the Norm yes
means it creates standardized systems
in different knowledge systems
including there space time

and it turns out that from here when you look at that
how does knowledge mean well for example, they should be Eternal yes
how a person should process
let's assume the Eternal structure of knowledge

then for Eternal life it is in principle clear
that knowledge must be Eternal

then it turns out that it is after all
a very large array of information
Eternal knowledge

i.e. The eternal number of years implies
virtually infinite amount of knowledge
and a person must be able to projective system
of this Infinite quantity
receive now
and be sure that it is real
There, forever , lives forever

i.e. because it is practically impossible to verify this in any way
and he is forced to simply know this systematically

and in connection with this, this systemic knowledge

Well For example there a man lives for a billion years
the probability that he lives forever increases yes there
but still only a very small part
because a billion years and one second
this question already exists anyway

and so that the knowledge about Eternal development was absolute

means that such a concept as

well let's say it this way "the absolutization of knowledge by means of
there is no volitional control"

i.e. external knowledge management should be like this

what let's say is absolute knowledge about the subject of management
should be like this

that here is the area of lack of knowledge yes
would be compensated

for example, the structure of the target action
or target management level

i.e. if the idea or goal is very concentrated there

then the idea itself is the carrier of control

and then at that moment she kind of pulls out the manager
into the implementation structure

well, what is the level of some party slogans there ?
elements of a bright future development there, etc.

i.e. when we begin to concentrate control
in the form of knowledge of the idea as such
it turns out that the concentration increases

i.e. some such Law of action occurs
that the idea is still concentrated knowledge
some idea there slogan yes

i.e. there is not much information as such

but nevertheless it means due to concentration
another system is pushed out

well which is called ignorance, yes
or we just don't pay attention
what's next

but this system contains the details of the idea

i.e. you can already see different areas of knowledge, etc.

i.e. it turns out to be detailed
this department is like a mono-system
in fact from the root system of knowledge
the periphery is separated
but it is separated by the principle of actual ignorance

i.e. at this moment we have no control
separation processes
i.e. we can consider that there is something near the idea
there may be completely different concepts
there are "applied aspects of the idea"
means "prolonged aspects of the idea"

but at the same time, with all this, we must clearly understand here
that we don't necessarily have to cover
all aspects of activity
in sociological terms it is still practically impossible
i.e. we don't necessarily have to remember them or visualize them

it turns out that the allocation of the structure of knowledge
it is an element of some ignorance
i.e. logically as such it turns out
for the Soul of man
"ignorance" generally speaking does not exist

The soul is constantly in the system of knowledge
there is development of knowledge
and to differentiate simply
one process from another
certain concept is introduced as if speculatively
that the person there doesn't know something at the moment

hence the process of ignorance
it is a volitional process
which is entirely determined by man

while the process of knowledge is a process of often
Well as if synthesized

and indeed logically often
there is something a person has the right not to know
he takes and does not pay attention to something
and at this moment he does not perceive this system
he doesn't know about her
not because he can't know

he doesn't want to

i.e. the process of ignorance is a controlled process

and here is knowledge management from this position

this is a fairly convenient value

it is enough to enter into the area of ignorance

some process

they are already easy to manage

i.e. there is a management task yes

some level of information there

this level can be sort of wrapped around

level of lack of knowledge

please you can move it anywhere

and the internal glow enters the area of implementation

what does it give

firstly, it gives a kind of silence , yes

at work

i.e. the person works quietly and unnoticed

therefore available

and that means the control output is in the separated area

becomes more, as it were, more expedient

i.e. more prolonged

and access increases

because if there is a level of knowledge as such, yes

quite clearly manifested

Well let's say you know that somewhere there is a roar of water yes

i.e. a waterfall that has a roar

if you remember it

then once you have this level of control

come out

then this rumble is in principle audible

but you can take this segment and compress it

and simply envelop it in a large volume of air

i.e. simply increase the air in control

then the rumble is not heard

and this water can already be moved there as if in control

to see for example to get diagnostics

field states

because there is a lot of water and the comparison gives an analysis

i.e. this is one of the technologies

when we use some real systems
for testing diagnostic systems

and it turns out that this is precisely the use
mechanism there is a lack of target knowledge
on the subject of management
it is still quite an effective system
in essence, management of the same knowledge
even if they are absent
in this control

and so that man can eternally develop
so that he could have a harmonious development in Infinity
God created the level
where is knowledge for example yes one person
there they pass into general knowledge into the knowledge of all people
when exactly is the transition level
means the following knowledge

i.e. it is , well , actually the same of course, yes
but we can say that it corresponds absolutely precisely
but in another place
and in another Perception
this is still a different kind of knowledge

i.e. there may be knowledge about the Sun, for example
but in a different area and by a different person
this knowledge is perceived differently
and it also depends on the time of day

it turns out that we have
due to the fact that perception is different
is one phenomenon there

we have different aspects including mutual development

and from here we can trace
this linear axis of knowledge
where is knowledge as such located?

For example there the student needs to register
quite quickly there some coursework
need to master the material
then he must take as if pure knowledge is best convenient
why bother with letters or study something there
you need to take pure knowledge and pass the exam yes

so it turns out that ^{means}
why did i say it ^{there} in letters
because basically it looks like this on the information
what is the ray axis of knowledge
and around there there are texts, ^{let's assume,} just a set of letters

so when do we start to remove this line?
by the way it speeds up a lot
mastering any level of management
we believe that these sets of letters are not functional

i.e. we can't, for ^{example} , because we have little time
^{there} use linear reading of the material
we need to gain knowledge
it doesn't necessarily apply to the session ^{there}
or it can apply to any management

and this central axis
we just need to take it away
get pure knowledge substrate

in the end, a person receives simply a substrate of knowledge
which is projected as a kind of projector
Well, this is a purely mechanical model.
^{it means} it creates in a certain way
the entire system of interactions
person and object of information

i.e. how he perceives
how the control system is being reworked
or knowledge through a person, etc.

and by the way, the more knowledge a person gets
the healthier he can be
in fact, there are a large number of connections

i.e. it is useful to obtain knowledge, generally speaking, it turns out

and when ^{does it mean that} we look from here
that this is some kind of pure knowledge
we can take it and move it mechanically ^{there}
into some receiver ^{there}
then we all know ^{yes} and no problem
^{there} is no need to mess around with some literature for a long time

then here it turns out
a kind of consequential factor arises

some kind of trail or trace of external Reality

i.e. Reality begins to tighten
trying to return
as if this central segment is glowing
some kind of inner fire and torch, so to speak
back in place
and all the time as if means to distract attention
on some kind of linear system
there are words with the same letters, etc.

and when does the question of correlation arise?
here's how to make it so you don't pay attention
on these letters and words
you just need to create them in your own understanding

because creation is a one-time act
from God's point of view
This is where my Teaching about God correlates with that
how to create knowledge
but gaining knowledge is, in general, a multi-linear process

i.e. here we are building one axis, the second, the third
and set the target in the control center
the luminous areas that are around
they always act in the management's favor, so to speak

because we know something there Yes
and we can name something
let's assume that in this case we
we do not consider this area
we think that maybe it is not necessary we don't know
at least we don't think that this is this optics
relates to the subject of our action
or is this concept we need in the future

and it turns out that when we
This means we are already starting to develop further

and see that any element at all
whatever it is there any
in Perception
in Reality
only affects the upgrade level

i.e. even if it is destructive there For example yes some element
which shifts the event by the control target

take the element there
bring him to the level of lack of knowledge
try to bring it out as if well, in the form of a block there
into the control system

then the element becomes harmless
is an aggressive element there
if it is enveloped in a system of lack of knowledge
firstly, it can't go through this system, yes
i.e. the system is behind internal protection
can't hurt himself if he is aggressive

and moreover
wherever he is thrown into some management environment
it's not functional, there's no knowledge there
there is no interaction with the functional environment

so it turns out that knowledge management
in this case, it is actually a powerful mechanism
here again details yes
and again, still the management itself by purpose

i.e. by and large
there is practically nothing in the way of management
from the point of view of lack of knowledge

and from the point of view of knowledge availability
Well then the question is this
how many of them are needed to make the control

i.e. for example there Save the World
how much knowledge is needed there in quantitative terms yes
or in time of action

but there is a very simple aspect of management here
Infinite amount of information in the world
this is still often not direct knowledge
this is conditional knowledge
there are some worlds there, some information
but we don't have to differentiate

i.e. it is perceived to a greater extent
as a lack of knowledge in the target area of management

so if there is so much information
which is kind of non-functional in the world

so what difference does it make in the end?
how much real knowledge is there on the current process

it means to consider that areas
Well, well as if a person does not know enough
and significantly more than the areas he studied there
you can logically just think like that

and it turns out that knowledge itself is generally unimportant
why, for example, in this design it is precisely the controls
this technique is fully revealed

because that's when God created the world
He didn't differentiate between knowledge and lack of knowledge.
He didn't have any concept of "knowledge" as such , generally speaking
i.e. He creates them Himself at the moment of action

i.e. He knows what he's doing from the start
and this knowledge gives birth to Reality
i.e. comes from Him

so when we see
the structure of the development of the human Soul
then the Soul is arranged in the same way
on the principle that each neighboring element of the Soul
generates and develops the following knowledge
the next element has the same

why is the Soul Eternal for example
what is the status of Eternity
why for example this means we know for sure that the Soul is Eternal
how how to see it how to prove it yes for yourself

which means it's quite simple
Well, there is a priori postulate there
It is known that she is Eternal
axiom for example

i.e. every person understands that it is Eternal
by the way, this is absolute knowledge, that's what's interesting

but when we start looking
where does this understanding of logic come from?

then it turns out that it is precisely this core level, yes
some kind of knowledge centering

it means some kind of central substrate
which we are trying to move or moving there
from one segment to another there

and through an infinite number of times
in the Soul this segment
comes back to the center of the Soul of man

i.e. it turns out by performing an Infinite action
we get basically the same thing
for the Soul of man

for the Spirit there is another action
there the information is already beginning to disperse
there the body generally moves
leaves control systems
always in different places

i.e. knowledge of the position of the body
always different in different places

and it turns out that the more concepts we consider
going further than the Soul
the more local knowledge we have

well, that is, the person walked somewhere
planted as some level of information there
like some kind of plant
or there is some level of Reality
knowledge of one's own about Reality
He couldn't have physically planted it there of course
just don't even think about it
well, because he walked there with his body
and the growth of the next Reality arose

so here in the system of curing diseases
very means a powerful control element
is
consider your physical body in this way
which means you can fully reveal in the physical body
next aspect of action
that the body is in the structure of Eternal knowledge
from a personal point of view, here

i.e. Eternal knowledge is a specific value
which comes into contact with the physical body
at some point in space-time

for the human body
as a rule this happens
maybe even just once
then a person already becomes Eternal at this point

and therefore knowledge, for example, about Eternal development
this is that level
when this value is a certain substrate
as I called it

so it is located
as in the physical body
for example, how is it located in principle
at any level as if so let's say actions yes
and is also found in any information system

i.e. the physical body of a person
practically possesses
properties well so let's say external information
in this case

i.e. knowledge
from the point of view of another person's perception
here a person perceives, for example, a person yes
any other system is basically the same
it differentiates in the form of a certain level of knowledge
i.e. he perceives any information universally

therefore from the point of view of knowledge
man is a universal level
and connected
in the understanding of another person
with other elements of Reality

for example, God created all people in Infinite development
those.
and immediately sees everyone as already infinitely developed yes
i.e. He can look into Infinity

it turns out that for Him there is a gaze into Infinity
it is as if Eternity of His simply physical eye turns out

because the property of Eternity
or the ability to perceive
namely the Eternal level of future development
this is, in fact, development itself
and the Eternal Eye gives this level of understanding

i.e. to live forever
in some cases a physical body is also needed

tune into the Perception of Eternity
i.e. how to adjust or orient it
development of the physical body into Infinity

and it turns out that the desire of a person
to be Eternal
superimposed on the knowledge of Eternity
For example there in human logic

and it turns out that then a person basically gets
as if Infinite its development in this way
what does it mean desire means connects actually
with the level there let's assume there is universal knowledge
with the level of some real processes

and here it turns out
that it is enough to connect one process only as if
with you
i.e. to realize that some process is connected with a person

for example, a person perceives some information
for example, so that the controlling clairvoyance would be developed there
need to output optical quantities
i.e. they need to be created, for example, in Perception

To do this, it is enough to create the first element
which is like the light there
and it is clear that here too it is not fundamental
what will you invest in management
the main thing is to invest in management
as if the first value which, for example, you created there
by concentrating on Thinking

and then it starts to arise
very simple development mechanism
further you see what really
at the moment of action
man creates knowledge
and can modify the meaning of knowledge

i.e. as soon as you see such a mechanism
precisely in action
then the controls become quite simple

in the sense that you see
which is actually the substrate of knowledge itself
which you, for example, wanted to transfer to yourself
it can actually be translated as

but for this all systems that denote
knowledge support i.e. words, letters, etc.
these systems need to be able to simply follow other Laws
convert knowledge into executability

i.e. we take the substrate and transfer it to ourselves
then we put the letters together somehow
and we are already starting to use these letters
these same ones
but it means from the point of view of Infinite development
it's actually quite easy to do

because let's take all these letters for example Yes
let's fix them in some sphere
and as soon as we start
roll the sphere towards implementation
i.e. how should we express control
if it's some kind of text, some kind of object, yes
here again if time concerns that
so that in some time they would study the subject there
then we need to talk about it
or remember something about it
I need to tell you in some detail

it turns out that here the transfer means to management
those. knowledge transfer actually yes
this is the status of a person who is
and in the Infinite Past
and through the Endless Past
intersects with the Infinite Future

i.e. here and there time is distributed like this
that the past precisely connects with the Infinite Future
and not through the present does the connection occur

It is important to note here
what is in the structure where we are looking at
knowledge or ignorance yes
it is the future that arises through the Infinite Past

because it makes sense logically
because in the future we can't say for sure
there is knowledge or not
and in the past they definitely exist yes

so we can see the future
only in terms of docking
Endless past
with Infinite Future

and that's when we start to determine it
then we see that the status of a person
he is located there, generally speaking

i.e. the person is located
and in the Infinite Past and in the Infinite Future
then he receives the True knowledge that is given to him there
well the right one there yes the central path of development
from the point of view of God's idea of Eternal development

and logically it is understandable
after all, there is a point for God too
where He simultaneously controls all of Infinity and
i.e. from the past to the future yes

therefore, this is the level of connections
when we are in the structure of, let's say, undeclared knowledge yes
we can build any structures
, in general, a very effective level of management.

this is how human thinking works
in most cases a person thinks this way
what does it mean it forms the following knowledge
depending on the state of mind there, yes
well, in short, from specific events

then it turns out that we can see
mechanism of development of thinking in humans
there, for example, look ahead at your thoughts
there for ten days there a year there a hundred million years ahead
you can see
and what does thought look like then
from the point of view of Infinite information

if you look ahead a day
and see all the structures of your Thinking
it turns out that here, as it were, the subject of Thinking , yes

the very structure of information distribution
they are like this
that you begin to see the structure of Infinite Development
as if moving inside the thought
i.e. you begin to see the construction of thought

and so it means that the design itself gives knowledge
about moving
and about the properties of thought
i.e. you know what you are thinking about
but you can change your mind at any moment

that's what God does too
for man He created freedom of action
for Thinking it is the connection of thought with events

i.e. you can think one thing but the events may be different
built at the same level
interaction of the Soul and Spirit of man
where is knowledge i.e. lack of knowledge
should not affect the result

this is the important principle of management
that a person has knowledge of management or not
he must still be saved and at the same time save everyone

when we are from the point of view of this process
moving to knowledge management
it turns out that as I said, there is an infinite quantity there
well, possible processes that we don't need at all
for Perception
and the final action
these are incomparable things

that's why I said it right away in today's seminar
that knowledge may not be fundamental is true
it is enough to assign control

and here is the control destination point
this is your personal knowledge
i.e. we come to the conclusion that a person ultimately
refers to existing knowledge
but which is located as if inside a person yes
or comes from the person's personality
i.e. a person is initially endowed with this knowledge

and then the question arises
where is he endowed ^{yes}
Why does he ^{need such a resource?}
well where I mean geometrically

it is clear that he is endowed by God
but here's where
in what geometric space
Perceptions
or there is physical movement
it's happening

so here is the move
any level of movement
any random event

this is knowledge as external ^{yes} Knowledge of God
and clearly manifested often exactly as the Knowledge of God

i.e. if we ask the question
any movement, ^{yes} any
any of this is the Knowledge of God
but here is the private movement of one person
it is still human knowledge

there is a difference in movements
i.e. some random event happens in life
as if by chance a person
but God still knows about it
He just organizes it, it turns out.

and then the question arises
about responsibility ^{yes} For example there is God
in Action
in relation to a person
or in relation to Himself ^{there}
or in relation to Eternal development

i.e. God as the most responsible level ^{yes}
who precisely controls the whole future
It is still a level of responsibility
shifts to a person
so that a person understands
information distributed ^{there}
how is Eternal life realized , for example, etc.

and based on this we can say quite clearly

what is in the system for example there is endless knowledge
we can see quite clearly
what does god mean well, he passed it on
a certain level of responsibility to a person
or is there a maximum level of responsibility
transmitted to man in Action
so it shows that from the point of view of knowledge
so man and God have
equal status of Infinite actions

because there a person knows about God
God knows about man

and this is how they are as individuals
due to the fact that they know each other and or recognize each other
and God always recognizes a person

and here it turns out
what exactly does a person know mean
here it turns out that knowledge comes from Perception
this is the knowledge of Eternal development

i.e. it was enough for a person to do
there is one level of Perception at birth
and it can develop forever
although this connection is quite speculative
however, from the point of view of interaction
man-god
that's right

and by analogy, it means interaction
human
means in relation to any other level
Means well with someone yes
it is still a factor of Eternal development

and here it turns out that when we, for example,
we make management in Infinite development
so that you get
Well, let's say Infinity at an approximate level
i.e. you are gaining knowledge now

then it is clear that this is a projection of Infinite knowledge
i.e. some local action
it is, well, some kind of crystal where there is light

Well, I mean an information crystal, yes
where is the light
Souls
Spirit
Consciousness
physical body of a person
this is the level that illuminates the whole world

i.e. we can see what it is
Well it looks like a crystal
but in reality the whole world is being illuminated
knowledge of one person

and for example if we look at snowflakes there
which simply fall somewhere, even far away or nearby
we can see through the crystal of these snowflakes
general knowledge
which are there in the human heart
in its essence

and as soon as a person sees
this is precisely the general level of knowledge
then it turns out he already decides then
their tasks quite objectively

i.e. he understands what is really happening in this World
he sees that knowledge management
this system is often external after all
but it can also be an internal control system

and when you start to see that your knowledge
comparable for example
with knowledge of Macrodevelopment there are all the people there
then in principle you become then
it is easier to develop towards Macrosalvation
because you have received equal status for your knowledge

i.e. all the experience that people have accumulated
or which exists in people
it will be applied
for your Infinite development

as soon as a person understands this, he sees
what is needed is to increase and develop civilization
we need to increase the creative aspects there

development of any areas of human activity, etc.
i.e. a logical principle of control arises

and here is knowledge management
it is still an external structure

i.e. the ability to identify knowledge as such
by area of management
the ability to form in knowledge
it means the level that is determined by the structure
knowledge as such

after all, it can be viewed in optics
there let's assume the goal of management
some other processes are possible
but knowledge is still something
what you now know about including this design

and when you use this construction yes
how to get it, generally speaking
in the form of external analytics

i.e. a person knows himself
but at the same time every element of the body

this is how the other perceives and knows
and a person seems to be within himself all the time

i.e. he under no circumstances
can't for example there to do some actions yes
well, those that are not subject to the physical body, for example, yes

and it turns out that based on this
we get such control
which is similar to the human body
knowledge also has a function
where does it mean well, neighboring segments
they can't be crossed, so to speak

i.e. the function of knowledge by analogy with the human body
she is like that
what if a person wanted to there
let's assume there is a place to reach with your elbow
there on the physical body
For example there in the area which is hard to get to yes
or can't get it
then the limitations of the physical body

in the plan there may not even be any restrictions
advantage

i.e. a person is designed exactly like that, yes

this means that these phenomena are transferred by analogy
or the actions of the human body
on knowledge as such

i.e. in order to know you need to perceive with your physical body
including
not only there Soul Soul already knows yes

and it turns out that the basic structure of knowledge
distributed in a person through the physical body

as soon as we begin to perceive such an element
logically clear
a person was born and he began to receive some knowledge

and then that's exactly it
the very principle of this acquisition of knowledge is very important
because here are the threads of knowledge
i.e. some information
which goes for example yes into the physical body
This is a powerful system for example for healing
This is a powerful system
including leading to Eternal development

to a precisely static level stable level
it means Perception of this Eternal information

you just need to direct your knowledge towards it
what do you know that there is for example external information
which is practically well defined by that
what do you see so to speak infinite development
in terms of a personal decision there

i.e. knowledge coming to you
you differentiate and assign
right at the moment they arrive, as if to you
that this knowledge is precisely of Infinite development
i.e. you just perceive everything that way

therefore when you just perceive it like that
you get
mechanism of simple regulation by knowledge

here is the statics of Perception itself
which again arises from you
i.e. the main thing here is to maintain a level of control all the time
we have built many control systems
and so we need to maintain a level of control
there is action at the level

i.e. you can perform some action
and this means we have such a design
that the action is caused by, for example, there is a movement of personality yes
some kind of macromanagement mechanisms there

but for example, one can consider the action
how is God's Action anyway
visualized as if by you
and when you start doing this visualization
from the management side

then it turns out that here it is the level of the word itself or something Yes
control through words
these phenomena are already becoming irrelevant
i.e. you control directly

This is where it is important to show
that regardless of the level of word formation
i.e. the word can be different
maybe there let's assume it means one action
you can put in another informational meaning

and it turns out that when you do visualization
by means of many superpositions of different meanings yes
different management
i.e. take all knowledge for example mix there
and how to define them in some level one

Well For example there is a certain sphere to take
and take all the knowledge on the management goal
try to enter this sphere

as soon as you entered
knowledge begins to interact with each other
to define means the purpose of management
and somehow contribute

i.e. when you learn

then all elements of knowledge
which exist in Reality means
to put it into a management structure, as it were

as God does
He also controls because
that He is just all the elements
knows how to arrange harmoniously
in the field of Perception of knowledge about the whole World

then it turns out
they begin to interact independently
on the principles of complete free will

here's another reason why a person should be absolutely free
because then knowledge flows as if smoothly yes
from person to other people
or from God to man

and here in this management problem
when you through the technology that I just showed
in the form of "knowledge management"
from different positions and points of view
from the point of view of this concept

you start to concentrate
in the structure of, for example, one sphere of management
then here it is natural
due to the fact that in this area
there is an infinite number of reflections
and you have one goal
you naturally achieve control

as soon as you consider
for example the area well there is a lack of knowledge or ignorance
as an area that is still useful and informative

i.e. as soon as you start to increase these qualities yes
in the control system
it turns out that you naturally achieve control

because you are even an area of ignorance
apply as a system for example there is access there yes

because where there is no information
access can be easier, more precise, etc. and

i.e. you just assign access

i.e. you assign control to the target
and therefore you naturally achieve
i.e. you know that you will achieve control

and from here there is the Perception of the Soul
means that it knows exactly what Eternal development is
that everything is always possible

This is where I end today's seminar.

Thank you very much for your attention
