

GRIGORY GRABOVOY
The Teaching about God
Light organization of matter
12.07.2005

Hello again
the topic of my seminar today
this is my Teaching about God
Light organization of matter

in this topic i show
how through the different propagation of light
in fact, through the transformation of light in any way
obtain controlled tissue

i.e. we must be able to do this in this technology
means to use the property of light
by a seemingly infinite number
various options for the interaction of transformations

and then it turns out that we end up
we can have the fabric we need

i.e. in this case we are talking about
that matter is organized by light
as if at an external level of control

it turns out to be a light organization of matter
where external light acts on matter
organizes some kind of structure of matter

and we also consider simultaneously
the inner level of matter itself
where in the structure of matter itself
we can also consider the structure of light

those. matter is built on the basis of light

in fact we are at a certain level
Well for example, some kind of super high speeds
we have that interaction
where is the external light level
matches
as if with the internal content of matter

it turns out that we have a fairly rigid system
for example, in this case we can consider

crystalline system of matter

where can you see
what interaction

as if the internal contents of some matter
when released into the external environment
gives a very rigid system

well, such as, for example, the system of the crystalline system of matter

and just as God does
when He makes a control impulse
to an external system
He must make the support point sufficiently stable.

it turns out that therefore the substance itself
has a rigid form
because external control in the Infinite environment
should be based
at the level of some rigid system
which is objectified, for example
under external control yes

and so when we talk about that
what do we need to highlight for example
some faction from the events

Well for example, if we are talking about treating a person
then it turns out that the selection
some external system of events
this is actually a comparison of two rigid quantities often
but it happens that the value is rigid
and for example an informative value
i.e. dynamic value yes

hard is some kind of static physically manifested
and the informative is what develops in Infinity

and here at the level of the hard phase
comparable to the phase of Infinite development
i.e. a certain rigid segment
the same crystal system is rigid
is transferred to that phase of Infinity
where the interaction takes place
for example with a superfast element

some information environment

then it turns out that we can
always get the Norm for example of human health
if we use

this is the super-fast transformation of information
from interaction
rigid system
and super fast
in remote control areas

i.e. a rigid system of interaction simply with information
in Infinity
gives an average system after all

i.e. it is impossible to clearly differentiate right away, so to speak
where it's tough
where is informative
because the system of connections is very fast
the result is an average reaction system

so we get that
that the human body can always reflect
any unfavorable impulse
because all external information is dynamic
it contributes to that
that for example a concentrated and autonomous, so to speak, body
well, like concentrated matter
then it always has a function
as if internal interaction

because the external light that reaches the body
it is being realized all the time
as internal content

here is a person who can
just as, for example, God thinks , let's say, with the Soul
then also internal reflections
for example, at the level of internal concepts, yes
at the level of a person's inner light
this is if you often look at the processes in detail
then these are superfast processes of the external World

and if we start to detail the events
i.e. look where they come from
let's assume a system of some differentiations

i.e. for what reason does a person differentiate something

that's what it looks like from God's point of view

variant of differentiation for example

it's just a realization of everything

for example, there is the physical body of the One God

at some level of management yes

in some informative

or there in the physical control environment

it turns out that the internal system

God built it like this

what does it mean He implements control as if

as for myself

and for everyone

at any time

and at the same time controls all processes

at the level of, as it were, internal content, yes

some kind of status of the internal content

that's why when some unknowns arise

or there are random variables there, as it were

from a human point of view

then here we have control of the internal state

makes it possible to level the situation

because God can see

As if from all sides at once

His primary impulse

reflects the whole Reality

i.e. He builds a Reality that is cognizable by man

that's why God is somehow still somewhere

in fact, you could say so

very clearly intersects

with the human plan of universal development

because it is precisely the system of what is knowable that is

technology

human

realizes the Eternal development of man

even in conditions

as if beyond some quick, urgent events

in the current tense

and if you think about the context
namely the Infinite development of each person
when a person, for example, speaks clearly
that regardless of any situation
he has a structural development
there is informative biological development
Eternal

it turns out that the structure of Eternity
is located somewhere in the supra-event nature
any well like a tissue manifestation or something

i.e. there is a fabric of a certain event
i.e. this is a value that is sometimes constant
sometimes a dynamic quantity

and it turns out that if we find a place
above tissue level
what controls the fabric
then it turns out we enter immediately
to the point of primary control

and at this level, for example, God is a single impulse
can control all phenomena
even in impulse
not to mention that there, for example, in real time, yes
look

then it turns out to get the same system
for a person
he must be in impulse
just introduce some kind of super high speed

where is the point of contact
with some molecule
means the simultaneous development of this impulse
well, into the Infinite System

i.e. the speeds are actually that high
that as soon as it touches
some kind of impulse
with some point
then it turns out that it is already everywhere

Well, I mean, you could even say that the speed is overwhelming.
the further the process spreads
the closer to the beginning of the phenomenon

it looks like this in geometry
like what if we consider the speed further
then we see more basic levels
i.e. until the event itself

and a certain system is obtained
well, some kind of curved eight
where we have
status necessarily Eternal development

for any value
the one that is located for example
under the status of Eternal Development
at least in the Perception of one person

this is where we come to that
what if at least one person perceives
the structure of Eternal development as such
then we can see
what then the whole system can have
real Eternal development

because this is the status of universality
this is this super speed yes
which hits before the event even starts
this level is very deep
in terms of the implementation of the structure of the human Soul

i.e. the soul of a person is basically realized in this way
in the sense that it is located
and in the future and in the past and in the present

it turns out that there should still be some here
some kind of super-fast characteristics
if so from the point of view of speed of conversation
which exist everywhere
including at or before the initial time

and it turns out
this is the existence before the beginning of time
it actually outlines a certain autonomous position
physical body of a person

human tissue level
where outside of time there for example outside of space
if we consider the structure of human action

then it turns out that we can then consider
all people at once
Well for example, how to take and consider
are there in civilization

To do this you just need to consider
human physical body
beyond time and beyond space

then it turns out that we have there
in the absolute sense
the current state of humanity in terms of the number of people

and so that in the future humanity will only increase
in the absence of, for example, biological problems there
so that people don't have such management plans, yes For example
that he strives through the structure
Well, there is supposedly knowledge there
have destruction of the physical body

then we kind of think
what can we do in Infinite Distance
have a very stable development, so to speak
for future processes it means precisely universal development

because the level is fixed
gives, in general, the statics of the current plan
which is also stable yes

i.e. we can see billions of people there
there or millions to watch at once
and we can see
what about in the preview version
we are somewhere crossing the structure of the future

and so the intersection gives that the same type of level
characterizes the presence in the Infinite Future
the same sustainable development
humanity yes
human
means which exists for example now
or existed there in the past

i.e. these intersections
they look generally speaking
just geometric levels
it just looks like some kind of geometric intersection
one Reality with another

and we get that in order to improve a person's health
in case of any ^{external} problems
for any possible diseases
for this you just need to ^{be} on average statistics

Well so to speak, in some universal understanding
among all people
find that area
which corresponds to a healthy person
well, in general, to the one you, for example , treat and heal there

and finding this area
you just output his control image

to this point
into this system of space
and it turns out that he becomes healthy
because we got
actually a light image of action
which is also a physical Reality

corresponds to physical Reality

and at the same time we received the light level
due to some management, for example , there
With soul
some level that may not be defined
but it is related to a person
as a rule this is the level of super fast Spirit
which is in Infinity
The spirit of this particular person

or simply even the state of the physical body
which is also a controlling factor
movement of the physical body

and it turns out that we
this is the signal receiving system
before the event
we are starting to consider it in the context of that

as God does from the beginning
when He shapes events

He must actually know about the event.
ahead
and get signals from the point of view of logic yes

that some event has passed
it turns out that means God must be there
before the start of organizing events
and of course control all the following connections

it turns out to be this level of interaction
signal translation before the event starts
this is the level that says that
that there is some such concept as "time mixing" yes For example

time intervals can be considered
at different points
and receive comparable information

Well, a person can remember
some areas of action there are geometrically even there or

and consider
how they are projected
how is this light in memory so to speak yes they are projected
for future events

and that's when we look at
what light
light-generating system yes
or the thread, so to speak, is even
then it turns out that we are actually acting correctly

i.e. in general it is possible to simply diagnose
in the structure of some kind of string or something
here it looks like some kind of stretched string at first
if you touch it
she becomes soft
and disperses like such multi-angle light

and first a linear string
It looks like, let's say, a laser beam
such a silvery, light golden color

and when do we start to disband

i.e. to approach ^{yes}

it turns out that we see that from our approach
an event is created

so God really could have created
according to analytics it's simple
event
when He made his first movements

because once a person has
element of such interaction in information
so of course God has an element of movement

than then He moved ^{for example yes}

it turns out that if we consider the process in general
then He moved with the help of, ^{as it were,} external space
which He had previously created

i.e. the light of His Action

it seems to coincide
with pre-creation light

when we have this ^{kind} of control wheel
let's start analyzing
then it turns out that we really can

to have ^{as if} before an event
if these are complicated
^{Well,} some of them look like technological ones
such overlays in multi-view control

if we can highlight
some universal light image
from a large number of events

it is done very simply often
a projection plane is simply set
and all events are projected
on a specific given plane

and we get there practically
^{Well,} first of all, the Norm of all events in the World is immediately visible
if we consider all events

and in a particular case one can see
your personal tasks

which are performed for example in an appropriate manner yes

i.e. you start to see
that the task is basically implemented like this
exactly as you would have liked initially

i.e. there is a nuance here
that outside opinion has any meaning there
but in essence the best opinion for you
is always a leading factor

at the event level
it turns out to be an advance or let's say a pre-action
this is what is better

basically that's how it is
what we lay down as a management goal
before the start and before the initial level of management

and having disassembled it in this way
here is this optical model of action
we can see
what is the ratio there for example actions
let's say Infinite or there is some local action
in the conditions of the light level
it is precisely the formation of light and shadow that even
light-level forms
or formation by light

any actions often become universal
for example, the light there is still universal
Now if we consider management
from the point of view of light
how light shapes fabric
it turns out that the action carries information
there in Macroworld
corresponds to the action that means
in general it can be the level of the microworld

there for God it's the same, for example
what influences the macrocosm what influences the microcosm

it turns out that we can have
here are the universal light-generating quantities
always before the beginning before the moment of events

and then a problem arises
and how do you even know the event then ?
how to get some building material
and precisely control the development of events

so this is some kind of curvature
i.e. the direction of the signal
from a future event
through the point before the event to the Soul of man
this is what is specifically expressed
as a light-generating axis
or the action of the Soul of man

i.e. what comes to us
at the level of there formation of pre-event
this is already our presence in the future
that's what God does too

and it turns out that when we start
analyze the process in this way
what we need to be able to combine
there is a future action
action of the past
how pragmatically part of the time coordinate often

it means some events
we need to have time to somehow conduct it in management

it turns out that there is a very simple angle here
the event always manages to actually be held
in the system of any context of events

and this light is that
which is supposed to be based on the inner depth of a person, yes
his awareness means all systems of the World

and it turns out that as soon as we
Well, this is, for example, a deep status
we find in management
then accordingly arise
certain levels, so to speak, in management
which, well, look like everyday ones

but nevertheless a man
when manifested in some systems there places
if there are technologies for organizing fabric there

according to the light-optical system

may well consider that situation
what can he control
there is some specific region
where is it physically located

so we see further
what exactly is a light-optical system
which is now reflected there in words
at this seminar

and you can get out through it
on optics as if through action
then you can see that words are, for example, actions
can be replaced
by means of direct light-optical power yes

i.e. not to speak in words
and just put this light optics on everything
in the management goal

then it turns out that
to get the time before the event
you just need a precise amount of time
after the event know
and after the current time

here the subtlety is not just there
at any point in the past event
namely after the current time

as soon as you start
keep this parameter for some time
you get to the point before the event

i.e. to the point where it can be
not in the specific pre-event itself
and in general there is something near this

to get the point exactly in the pre-event
i.e. what happened before the event
there literally in milliseconds for example

then it turns out you need to consider
all that centuries-old history there
management by this system

which is currently being implemented

and in general it is often advisable
build so that the light precedes the event
this is the natural level of the event itself

i.e. if we consider it from God's point of view
management model
then He Himself is well, in general, the level
all Reality strives

and it turns out that formation means
pre-event points in control space
this is the level that projects the event itself
to some point in the past
where exactly is the pre-event

and since we are moving
from the level there before the event
then it turns out that it simply exists in the World there
a series of agreements where people determine
for example for the structure of the past
a certain series of forms

and in the collective Consciousness to modify the past
it's possible, it turns out quite calmly
You just need to pick the right forms

the same thing, for example, when meeting a resurrected person
level means supply of a kind of universal form
so that at the moment of the subsequent action
his action of this man resurrected
would be adapted for example Yes
to general questions

so it turns out that we can
here is the light optics to move
as in the structure of a kind of internal level

fabrics
substances
actions

also output to an external system
and it turns out that the internal level
well, some kind of fabric or action there

action and fabric often coincide
in the structure
where a person's personality is already fully expressed

i.e. it turns out that we can say
what is the human tissue action system
this is actually, in general, the light optics itself as such
For example there is a physical body

and at the same time we can see absolutely clearly
what if we decided for example
this element is still a precursor to the action
to highlight, like , an autonomous value

because in light optics
this is actually one of the most important
in some cases the most important task
ability to highlight the pre-action
at the level of optical systems

because then it's easier
you can in action
make any adjustments to the controls

and now we need to take it together
and there, for example, highlight the axis of the future
and then introduce it as collective management
for the sustainable development of this axis

when you do this, then pay attention
if you do it individually there
one level of control
if there are a lot of people
another level of management

and it turns out that here you need to choose
the structure of the internal contents of this object yes
what we bring to the level
For example there is popularization in management
what specific element

here you can see it
how does the social connections system work there
here light optics organizes social connections
also according to certain canons and laws

and what is called light optics
this is some kind of ordinary light system
in the usual sense, just light
which speaks about that
what is in social systems
there are very , very complex systems of interweaving
in terms of events

and that's when we take as a basis
human health
that he should always be healthy

then we see the forecast system quite clearly
for a given social system

and we can clearly say
that the light-optical principle in the organization yes
for example, there is a human dwelling there
in terms of control via light optics
some processes often near a person
there literally there in physical space
there you can clean the air , etc.

and then it starts already
more like a general level of management
where do you see the light-optical base itself
when we apply it to a person
becomes infinitely developed there, let's say
"humanized" as one might say

and the reverse impulse coming from a person
it forms again only a person
but already as if in an infinite distance

i.e. it turns out if we work
on a light-optical system
through images of people
then we have the next level of full development there
where there is a level of Infinity

i.e. it means full development
i.e. all the possibilities there, for example, of the state, yes
for the implementation of their programs there, etc.

and that's when we look at
for example, a light-optical level

as a level that affects
there are social systems there too
and there are some physical ones

so basically we have something like ^{this here}
some kind of universal approach after all
what if we want it to be at a natural level
when we are not distracted by a specific figure
we had all the information

then we must consider the action
any information as a universal system

and then we can see
that we don't have to go anywhere
it is not necessary to be present
although you can, on the contrary, walk more and be more present

but it is precisely the freedom of your movement
will not be connected in any way with the knowledge there
which are embedded in some system
or maybe there are some limitations there

therefore the task of management
through the formation of light optics
this is the organization of those routes
where knowledge is freely transmitted, it is not restrained, etc.

and that's when you start
such a process to see in management
then it turns out that you can in principle
any task there any disease
bring it to the level of healing there
to standardize any task

you just need to make a selection
^{as if in detail in small details}
which can now be influenced

i.e. it is meant
what we can do creative influence
on any element that ^{seems to} allow this to be done

and it turns out
that detailing through the light-optical level
as it turned out, this is a fairly systemic technology

you can get, for example, details
so that you can realize
for example, there every step, every movement
practically there at any given time yes
remember

and here's to overcome
some complex problem there in its action
personal
the light optical level needs to be spread
to the level of problem solving

i.e. from there a beam of such light
get controlled light
which begins to act
into a specific control system

and here is the light optics itself in this case
can be based
on a number of axiomatic principles , so to speak

so these are the principles
so I think that here we can consider
what type of axioms are in action
what is the first level there
that the light-optical level itself is infinite, for example

second
what can be placed there
basically any system
very high speeds

and there is a third principle, for example
this is what the speed of the initial action and the final
they are the same there

and here you can see it
that as soon as we consider
sameness of action
initial impulse and final
then it turns out that we see
the very process of organizing the World

as God did
Well at least here you can see
through human perception

how does the docking level happen
initial and subsequent action

and as soon as a person begins to understand , for example,
in this control system
then it turns out that here
just like in God's Perception, yes
He has a beginner level and the next one
this is basically one certain level there
pretty monotonous overall

i.e. you need to try to understand
how is the initial action form
light optics
must be equal
form or some parameters
all future actions

and it turns out when we make this comparison
we put it into control as a simple task

it turns out that we can quite well, as it were
well, let's say literally at the information level, yes
form words

explain what is in light-optical control
as if external or internal
as a rule external
there is always a principle
what is the initial impulse level
that's why i was talking about the pre-basic level
it is precisely this that is controlled by the individual himself

if we can in one place
go to pre-basic level
before the event began
then it turns out we can do it anywhere else
go out too
under some level of management or social tasks

and it turns out that when we have here
in general, the status of such an action
that external action is the same as internal

i.e. external macrosocial systems often
the same systems as internal single actions

it turns out that this is precisely the equality of man
before all events
there in front of you ^{yes}
in front of any other person

there is a principle of equal rights
where can we see that
that when ^{we assume} a light-optical element
it spreads ^{for example} there infinitely fast

then we can control absolutely all processes
^{so} the main thing is at the level of, ^{for example,} human Perception or
or at the level of God's Action

see that the light is at the root
can, ^{for example,} create any matter
but at the same time matter as well
can exist ^{as if} by itself

i.e. to introduce such a level of some kind of restrictive
^{as if} to realize the properties of light and consider
only status ^{for example} can be found here in analytics
consider the status of mere matter

then it means matter begins
immediately give out everything that is in it
^{well,} that is, all objects are immediately visible, etc., etc.

and ^{for example} , by the way, from the point of view of ^{counter} -terrorism
specifically for counter-terrorism activities
if technologies develop Spiritual management
it is precisely the allocation of structure
beyond time and beyond space
gives you perfect analytics right away

you can see right away if there is something unfavorable
^{for example,} there's some kind of gun ^{there}
where is it located in what place

i.e. you can see clearly
any location of means of destruction of a person
or an animal, etc.

and it turns out that we can
this technology can be used for that

to heal there
some kind of fast dynamic diseases and some kind of
or try even static diseases
in management to take through this technology means

but then you have to see it
to make the process faster
must see
all Infinite future

from one person's point of view
how one man looks at everything endless future

when we, for example, already see this process
then it turns out that we have
well, a fairly balanced system
what is external control and internal
has well as if it were approximately the same resource manager

i.e. we come to a point of equilibrium
which is actually also conditioned by the fact that
what can we have at this point
Infinite number of events

what is equilibrium anyway ?
docking of different systems yes
which means an infinite number of events

and if we are like this light-optical level
we transfer to the equilibrium phase
we get background
in general, the glow is quite balanced
in relation to your body

i.e. information coming from the body
says that yes, everything is fine

then whatever they were already
internal control systems

i.e. a person can worry and think
one particular system
how to perceive as Norm or other
but if all external information is standardized
This means that a person can develop calmly
into the future Infinite

i.e., like this, for example , technologically
if you put the question like this
a person must move there endlessly yes
Living forever in terms of technology

for this it is enough to build often
quite a conditional sphere there
or there is some kind of crystal in the control
and say what it means to have protection
for example, even on the principle of solidarity there
in some area of activity yes

and it turns out that if we have
, that's it as if a consolidated action of various systems
well, thus manifested
what let's say more or less the next in the development of the system
for example , there the car appears first, yes
it turns out that in management there if you look at the road
many cars
people can perceive machines there
or some systems already created by people

then it turns out that this is what
namely the selection of the light optics of the initial plan
this is how god does it
highlights the initial yes
or, as it were, the culmination level of the system's development

and it turns out that here we can
in principle, giving control even gradually
even if it means handing over control
at low speeds in control

we may still end up having
comparable management with that
what if we worked there for a long time
or for example there long and fruitful

but the connection of some often
one needed impulse with this system
makes it possible to implement it immediately
structure for example there Eternal development

and at the same time a light-generating system
through which harmonious phase did it go yes
it begins to have characteristics

in fact, as if individuals

i.e. a person begins to evaluate the system
through personal context

and then it turns out
that information can be perceived
any external system
in relation to a person yes
as the information is fairly stable

and here to move on to the technologies of Eternal development
in terms of a mechanical transition , yes
through some level of the legal system

then it turns out that here we have
for Eternal development
more favorable systems of social development

because Eternal development
this means that the house stands there for an eternal number of years, etc.

and based on this
light-generating level
which necessarily takes into account
it's still a social level
there is a political one too

we can get a picture like this of the action
or there are aftereffects
what is the preliminary impulse
which you receive
from any other object of information there from a person
this impulse always comes to you in its pure form

Well, in general, in the one in which, for example, no one bothers you
and you develop freely, that means

and this arrival is like a return signal
the rejection of this primary impulse
this is a division of everyday actions

Well for example there is a gas stove
there are two burners or is there an electric stove

and in one case the water boiled there
otherwise it will boil anyway

if you put it there on a hot surface

i.e. it is meant

that the action which is conditioned in any case

like this

so if we look at this picture

and with this picture we rise up

for example, there is social management there

if there is someone rising up in some other country

it turns out that he can rise

only due to their personal abilities and management
really

because this is the light-generating one

some kind of universal type of force

she actually acts like this

that you get some kind of average Norm

which is performed periodically, as if in a pulse

in relation to different people, as if in different ways

i.e. God is One

but His actions always turn out different

here's when considering this technology

levels are visible

it means , as if, the creation of private events

i.e. this is what is important

I think this is extremely important in this technology

where do you work

through the formation of an optimal, as it were, light for control

what private events

they are generally often intersected in many ways

well with other private events

but at the same time the status is like coordination

by central system

for example, by the level of government there

This is a social status

which actually exists

in many ways even as if by itself

or it is well brought up in a person

and that's when you start to see

the internal structure of some ordinary and everyday actions
through the structure there is the action of light

then it turns out
that this is the fundamental root of management
which you receive
it immediately gives a multi-angle plan
where all knowledge systems are summarized

and you get what you want
any light optics can be transformed
into the desired shape
because the external knowledge system
it practically guarantees
any implementation of any primary creative system there

and in the future this system will remain creative
because the underlying primary impulse
it allows you to develop there infinitely

those. in light optics
a form that characterizes , for example
let's assume there is Infinite development
then this form is manifested in that
that there was an external initiative there
some kind of complex or simplified system, for example

and this form is what reacts
as if to an external signal
after the reaction
her optics still hit the pre-point
an earlier time

as soon as the event itself happened
we get that control actually comes immediately
to all points of space

before the event there was no such hit
and when the event already happens
we have a structure
at all points of the physical for example there
information space

and then here is the control through light optics
this is very important , as it were, in a mechanistic understanding

even level

what can be done, for example, by looking at the development picture

one particular event

bring out some kind of subcortex there that contains information

which exists as a level, well, a previous one, for example

and then build further in the Infinite level

those are like factors of events

which satisfy precisely in the Infinite plan

taking into account, of course, some external elements

and it turns out that we have in this case

quite a serious technology, for example there is a healer

where it is allowed to take into account

for example, there are external systems and internal ones, yes For example

simultaneously

and still have an autonomous development system

where for example Well, there is some kind of completely autonomous action there

and is based on the level of a person's personal perception

and now if we are in light optics

as in a generally complex control system

and it is often especially appropriate to talk about this

a more complicated version may be sufficient

because it changes very quickly

color and light yes in Macrocontrol

and to record and in general Well how long would it take to develop

control system

often not advisable

because the following events are already happening

and primary events seem to require some kind of correlation

i.e. the ability to actually carry out an event in advance

in this technology it is quite achievable

you can see it here

what is in the light-generating system

how do we direct the impulse, for example ?

how is he developing there

that's basically what we get

the whole configuration

there is external and internal Reality

here is the inner Reality

Each system naturally has its own
so the easiest option
consider the human action system

but the external system

for example, there is the development of the Teaching by my students
here it turns out that we have something like at the same time
both internal and external systems
but here is the external system
i.e. what happens through some external control
there with the same technologies for the development of the Teaching

they can get from the natural level
simply the development of space-time

i.e. this is how space-time is unpacked
that everything is going well yes

and here we can consider

for example, the same light-optical level there
at the level of there Infinite magnitude of development

i.e. each value

each element of the action in general
leads precisely to the Infinite level of development

and then we get

what if, for example, the very concept of "Infinity"
after all, light optics are especially dynamic
this is a very fast value

and that's why I'm often in a discrete version
I give the following concept right away

so here is the interaction
from the point of view of dynamics there are statics
it is quite a large management structure

but in fact on earth

every person should then live harmoniously
with any other
i.e. all possible contradictions must be resolved
i.e. he can live there nearby as a neighbor, etc.

and when we begin to set a social task

somewhere yes , according to this technology
then we can see
what is the social plan
why do I always show it there somehow
sometimes I emphasize
in terms of the social level there

what is the social plan
it's always a relationship level
with a specific place and region
there is a subject of the Federation

it turns out that if we begin to see
structure of the social plan
as a system well as if further personal development of a person

then we get what is, in general, a fairly simple option
what is possible here for example even there
without going into more detail, perhaps
in technologies, for example, of my Teaching

without often considering any special systems there
you can always have fullness as if Well or what Perceptions
from one primary impulse

for example, I have a task there
there for example there create quite a large number of seminars
but at the same time, for example, she is not like that
stuff there aren't these real things?

everything is very real
you can easily estimate
how much technology can be transferred there yes

and here is the reverse level, which means here are the reactions
in relation to any object of information
not specifically there to my Teaching
or some other level of management

here is the feedback information
she just shows it
as much as possible using light optics
using simply social processes
build a communications department
between some fundamental Laws yes
and local ones in the World

i.e. it turns out that if we can do it there
and it's not difficult to be able to connect
it is the fundamental state
there are fabrics there ^{yes}
human reactions

then we can see very clearly
what exactly is formation
due to light-optical systems
this is a level that allows you to go through it very quickly
by known levels of management
draw your own conclusions
finally make some new control element

and it turns out that we can have
^{Well like a status of Infinite development or something}
in what we ^{mean} at the primary level
which we implement in light optics
as the initial action level

then we're laying it down
between two intermediate actions
namely the status of Eternal development
on one's own
due to the logical ^{level} of Thinking

and then we get
that as soon as we have the status of this Eternal development
we translate
to the level of ^{so to speak} internal Thinking ^{yes}
or there external

i.e. we consider the movement of thought

then we can see
yes, you can go through any door, ^{well, I mean} through yours
get there quickly in terms of that
that you are in this Eternal development
you always see that the door is open in the future ^{yes}
in front of you

and it turns out that there are these light-optical categories
they begin to change
into the structure ^{well as if} events were sticking together
mutual acceleration of events, etc.

i.e. there is a slightly different gradation in the Infinite level
she reminds here
that at the same time
many people talk on cell phones yes

i.e. simultaneity of action
a large number of people
but different texts

and therefore here is the external structure , so to speak
She is quite objective
can reflect the level of Infinite development
through light-optical systems
so that you can see
Well as if in your opinion or something about your own status
that any fundamental systems there, for example
that concern you
they still often seem to level out
when the Macro control task is there Macro access

and it turns out that these are what systems of private tasks
which practically do not interact
with some light optics of future processes
and we can see the intersection here
there is your task
any other person

then this is exactly the position
which is emerging
what is your position, for example, personally?
it is already manifested in the implementation of the action

this is how it happens with God
So he sets a task
and somewhere it is being implemented yes

as if without participation, for example yes, there is a physical one for example

it turns out that here
it is precisely the ability to bring out the light optics in this way
to get
as if an internal system of one's own development

i.e. ability means to see
well, some kind of internal root
simultaneously

and the current status
why is this ^{yes} in management

and at the same time ^{as if} the next action
i.e. the ability to receive from a state
actually conditioned by such
Well or what is your target influence
beneficial effect

and it turns out that when in this key
^{for example,} interaction occurs
two systems of organisms there, etc.

you always have enough
^{basically} Infinite time
to implement
the system of your own development there

and it turns out that you are for any event
you can come prepared

i.e. to be able to bring out the light optics in this way
and so organize
internal contents of events

what can be changed firstly
at the request of another person
status ^{as} a primary form of governance

i.e. these super fast speeds
there before knowledge ^{and} before action
or let's ^{assume} the following action

it's all a formation
impulse some kind of instant formation
or common forms
or some kind of concentrated ones , ^{yes}

and it turns out that if we want to consider
how are galaxies built in general
and why ^{is} there any movement
besides the fact that ^{yes,} it is clear that there is gravity, etc.

So it is possible to describe the controls
where you can clearly connect

light optics with ideal aim yes
and with the goal being realized there
which can also be ideal
but then it became reality

and between these two elements of the social plan
one can single out a very clear one, as it were, the following
far-reaching level of management

and what does it consist of
that in any system
there is an autonomous quantity yes
as if external including control

then the management goes as if on defense
internal level
this is what if we start in Infinity
build lines of this type
that there is for example one line in Infinity
another as if from a lesser Infinity
or there from some finite value

then we get that the actions are often very strong
and we get , in general, even such a plan
that it can be super strong
on the usual elementary action of any person

i.e. light optics may not even appear
i.e. it is not necessary to see
some kind of light-optical element

but it's enough just to
how to perceive feel sense
and at this level to have a positive event

i.e. a positive event you can actually
not immediately as if to disclose in this technology
and work

This is exactly what I brought today's seminar to
skill means to identify, let 's say, such
Well, let's call them not very active signals, yes

there is a term there called "weak signal"
in this case it is not a weak signal
but it's just not very visible in the form of light optics

but can be the main level of management
and achieving the basic level of results

because there is very clear data there
that everything is fine

and that's when you master it
this is the system of solving problems
when you can through some such natural
even a household option
in light optics to find that point
which actually solves the issue
because you know the future
from this point from this position

then all other systems are obtained
due to the analysis that I provided
often precisely schematically

sometimes system analysis
I made a difference there on purpose

you can already find that state
which allows you
solve management problems all the time
as if without even being distracted

Well as if by the way
you are there all the time
in precise control position

This is where I end today's seminar.

Thank you very much for your attention
