

GRIGORY GRABOVOY
The Teaching about God
Managing extreme challenges
14.04.2005

Hello again
the topic of my seminar today
this is my Teaching about God
Managing extreme challenges

in this topic i show
how does the person who sets the task
namely some kind of fast or super - fast control
which also applies in general
to the extreme control system for example

or he decides
a really real extreme task
which is added up
or in the external environment in general
or, for example, in relation to a specific person
and there he is personally, for example

how should he carry out management
from the point of view first of all
precisely the long-term perspective of actions

because in this management
the main task is
clear tracking of the strategic management level
when you see for example a strategic plan
i.e. precisely the long-term management plan
the same is true for managing extreme tasks
are you located
in a state of well For example there is some kind of calm management there

This is where it is important to deduce
the level of precisely calm management
actually closer to the physical body

i.e. here it turns out that you need to be able to do it in general
distribute the control light in such a way
so that the light that you consider , for example,
that this is the light of distant prognostication
where events are favorable

This light must be translated closer to oneself, to the physical body

then it turns out that in this coordinate system
we need to determine what is actually happening first
location of the physical body in information

and then it turns out
that this is precisely the coordinate of the physical body
this is the level that actually determines
further actions are in this management
and the coordinate is found exactly as one coordinate

for example, how God does it in management
He comes from Himself.
i.e. from Your system of Action
which means that it actually works as if from one coordinate
i.e. He has no other measures, so to speak Yes

and if we speak
about there two-dimensional three-dimensional multidimensional process
then for God any process
this is the original process
there is a micro level of super fast speeds

and it turns out that it is necessary here
precisely one-dimensionality
i.e. even in general a point level of the source
consider as the only coordinate

i.e. in ultra-fast or extreme control
it is necessary that this coordinate
the only coordinate
grew into Infinite Action

then it turns out that you really have
quite a correct way of management
coming from how God does it
from one coordinate means Yes, God personally
entry level Actions of God

where He also self-organized
and at the same time he realized the whole world
i.e. single-coordinate action
turning into Infinite action
you get the implementation of such control

i.e. in fact, if it concerns you
this is the stabilization of a certain situation
where you can completely calmly
Well having spent some time there

bring out the next level of management

for example, such a control system is useful
Apparently in situations when you need to urgently help a person yes
or is it necessary for you to provide assistance to yourself?

but there is a nuance here
or as if the extreme task is real, for example Yes
from the point of view of information
or it's just a sign of an extreme situation

here you need to be able to differentiate
what is the sign
why do you need to assess the situation
such as extreme
i.e. maybe suddenly it is not extreme

here is also an important point of management
related to that
what is this concept of "extreme" of some kind
some tension
differentiate

from a human point of view
which one well seems to have some problems
or they can theoretically start there

how to differentiate
that he is , well, that person, for example Yes
can think of himself that way
that he gets into an extreme situation

it could just be that this is just his idea
but in reality everything is quite well for him, yes let's say so
from a management point of view

and here in extreme control
it is important to do so
so that the task that corresponds
that's exactly what extreme conditions are
it would be more like a task

where there is a minimization of the state in general

i.e. it is desirable that there be a level
which speaks about that
that this is a given level or this is a given state
it is not extreme
in the big sense of the word, I guess
i.e. that the condition returns to normal fairly quickly

if you just do it a little bit ^{yes}
a little

i.e. you start to change
structure of time form of time
you change the meaning of control ^{as if} one for another
more ^{like} simple

i.e. changing the management to simpler systems
This is a fairly effective way
here in this control system

i.e. you need to constantly find information
which makes the task easier
i.e. what makes the next action easier

i.e. in fact you choose in the information
of all possible options
a more favorable option , perhaps?
and which constantly improves the situation

from the outside it looks like
some kind of artificial action
that a person takes and there, ^{as it were,} comes up with something for himself
some easier situations
he himself moves along them

in principle, that's really how it is
i.e. in this case it is management
i.e. some kind of "artificiality" ^{in quotes} of this action
this is what is the control in this
in this case

because you have to go out anyway
from extreme level
then you must first build management
more optimally
and then go out ^{yes as if} along this path

that's it for now if we build management
It's clear to you that there is a norm

i.e. therefore it turns out that the concept of "to build"
here it is as if replaced by the structure of existing solutions
Well, yes, more lightweight ones

and that's how it turns out
that the person is moving
among some light-optical levels

which seem to indicate from afar
at the information level
some next action is more simple

and there is another nuance here
what should be in all these situations
exist in fact unambiguously
level
which says that there is a region
which is quite clearly manifested
as an area where everything is really normal

i.e. this area
it must exist as if unconditionally
in management

because in the extreme control system
this area must be constantly perceived

i.e. at any level of management
this area is actually an area
which is kind of created
but it exists as if in any information system

Well for example, there is some kind of tangle of information there
which a person perceives
as a system of action for example

and in this tangle of information
this area is always at some level
shines
or on one parameter of a person
for example on the Soul of a person yes
or on the Spirit of man
either on the physical body

and that's exactly the difference
i.e. transition from what level to what
this information shines
this is the structure of time in general
exactly the time that is directed
only for the best development for man

this is just such an extremely important method by the way
in this management
what is important is very clear
differentiate at the management level
light
this is the optimal, more favorable level

where does it come from
firstly, at least roughly geometrically understand yes

as a rule, this is a projection from the heart
towards outer space
well, to a certain extent
as if the leading level is the human heart

when you get this light for example
generally speaking, the main thing here is to see
what exactly is this light shining on
Your soul
for example Spirit
Consciousness
or physical body

and periodically as a rule the Soul
then the structure of the moving
i.e. exactly this kind of fairly intense
by the dynamism of the Spirit
i.e. it is such a diffuse glow
and necessarily a physical body
i.e. it seems like it's constantly going on here
some rotation of illumination

and this is the level of change in optics
this is what it specifically shines on
this is the optimization system, yes let's say so
from an optical point of view
this is the level that provides you
practically well as if an exact guarantee
that you will constantly develop for the better

i.e. time in a given management context
it's always a positive time for you

because in the extreme control system
It is very important to develop an accurate knowledge of that
that each element of time
brings a more positive structure
every next time

so it turns out that it is important for us here
time to determine
as a system of unambiguous development for the better

and therefore we can approach this very clearly
from the point of view of a resource of a particular system

for example the Soul in this action
has a certain so-called "resource"
although in reality it's simple
the action of the Soul in this case

The spirit accumulates as
as if an independent and self-sufficient system
specific resource
and somewhere implements this resource
for example at the next level of management

the body also has a resource, etc.

and we kind of constantly process
we remove already accumulated information
from each of the resources

until we reach the physical body
and managed again

Well, there is such a principle there
something is known in nature, let's say
some studies suggest that
what do dolphins think there
then with one hemisphere, then with the other, etc.

i.e. it turns out that we
this resource-saving system
we use it in this type of management too

because here is this
optical so-called prolonged
here's to a positive future
glow
this is a certain level of knowledge

this is how god does it
It gives knowledge that allows
overcome some circumstances
in this case this knowledge is given in the form of light

and light interacting with light
gives some kind of correlation

those. coming light
receives the same light in reflection
even apparently the color often matches

here it is important to see the coincidence of even the colors
but that's already on the next level

when the stability is higher

and when you manage at such a level
then in principle it becomes quite clear here
what is the concept for a person in general

Well as if the situation was so negative
that he cannot manage"
does not exist at all

i.e. here in any case there always exists
action
allowing by translation
well, some kind of transfer of control
sorting out the situation
always find the control level

and it turns out that this light
the main thing is that it is clear enough from the start
and then he might be there, blurry and distant

but you must already be a person at all levels
see feel as if to realize
what is this light
namely a good predictive future
he definitely will as if it is even being realized
even if you, for example, at the moment

you don't pay attention to him
i.e. but you need to know this

and here is the translation
this level is like the level of knowledge yes
when you can ignore
to this world
but you know that improvement is happening
for example, an action to improve occurs

then knowledge is obtained
this is a structure that actually in general how does it work
as the level of your own actions

i.e. your knowledge works as your action

stored at some distance from you
knowledge
the one I said about
it starts working as if for you yes

although this is an element in general of your Consciousness
therefore it cannot be said that this is a divided system

but you work on yourself
from the external environment, as it were Yes

and if you look at how God provides
for example, the Eternity of Its development
there is the Eternity of the Physical Body
here it turns out that He works
including with the external environment

Well, it's clear from the inside
He already knows everything, yes

but how about for God who knows everything
to be able to create exactly the element of knowledge

what is knowledge for God, for example? Yes

as if you think from a human point of view
there is , for example, some novelty that is knowledge
there are repetitive processes
about some well-known concepts, old let's say phenomena
they can also be called "knowledge" etc.

so here is the quintessence of knowledge for God

it turns out that what God thinks is
About myself at the moment
and about others at the same time

i.e. His thought
formulated as if in Macro- at the micro level
and transmitted on a personal level
precisely on a human level

i.e. for God knowledge is the ability to convey
those. this is the transfer of knowledge itself
i.e. knowledge as such
when this knowledge is used somewhere
gets to others and is realized

because for God it is a conceptual system
knowledge is concepts
He must always work.
at the level of pure yes as if categories

and it turns out that based on this
from a human point of view
it is precisely the transmission of some neutral information
into the external environment
i.e. knowledge of what he has in the strategy
optimal level yes

he might not even remember it now, for example
not only don't remember, don't pay attention to it
but at the same time this knowledge is constantly being formed
external positive Reality

just like God does
knowledge of the Infinite World
always implements
it is the Infinite World itself

God does what he thinks

and it turns out that based on this
we have a fairly specific category of development
precisely in the management of extreme tasks

what we need in any task list
which exists
well maybe not even extreme then

in this case it's more about management
precisely extreme tasks

and when we talk about regular background tasks
then we just have to put meaning into everything
just well as if of Eternal Infinite development
to any structure

and so, based on this, if we have
there are many glows from any tasks
then we can come to this thought
that in principle the world is a complex system
and for example how to say that some task, let's say
is extreme yes
and some not extreme

by and large the whole world is holding on
at a certain level of collective Consciousness
and the Consciousness of God is also included there

and it turns out that this is simple work, like a background one, yes
in a normal situation
she is often the same technologically
She has the same level of responsibility.
such as working at an extreme level

i.e. at the level of a kind of distant gradation of Reality
arrays are like this as if light
which denote

fundamental information of the World
concentration of events
these arrays are approximately the same

because people often encounter a situation
that no matter how difficult a person's situation is
he still has separate perspectives
sees at about the same level

and here a kind of paradox arises
what is needed is the external structure of the World
Well, it would be desirable to change quickly too , yes
so that the structure is folded

and the outside world is quite inert in this case
the same as in normal control

on the other hand it's right
i.e. stabilization of external control
gives you strength
and you make the control synchronous
those. increase

i.e. the external world doesn't ^{seem} to change

if you look at how God created Himself
then it turns out that He did it this way
what are the positions of His personally ^{yes}
He himself personally
He doesn't change
in the distant Infinite development

and therefore He also knows for sure
what does Eternal development have

i.e. here is the structure of external Reality
which does not change
that's on the one hand
Well, maybe in an extreme situation
it can ^{somehow} logically surprise a person
why is it necessary to take quick action
and everything flows as it should, ^{yes}

so how is the justice of the world in ^{general}
the question of justice arises then

so why for example the world won't change quickly
for the better
in order for an extreme situation to occur
for example, she just took it and disappeared
and the World there has the properties of inertia
example, it developed as it flowed
that's ^{basically} how it flows
at the level of Perception

and when do you start
Well, the concept of "flow" means movement
informative optical some segments
and like some liner there
main body of information
it has in diagnostics
the same characteristics

This is what I call the immutability ^{of} the external form

so here's how to create
dynamic form of development of the World
there must be at least one constant form

because if there is anything that is constant
we can trace the dynamics
if everything changes
then we are in an undefined coordinate system

and it turns out that this is the fixation
First of all, a person is a physical body
i.e. it is a stable static system
which indicates that there is a stable level

and here is the level
there are memories of the physical body for example
when a person remembers yes
earlier optimal states

or a vision ahead

those. two parameters
they create the current state of the physical body

i.e., by and large, if we count
that the whole world rests on some
still, too, often in extreme situations

then it turns out that it is precisely a projection
two unchangeable yes as if a system from the past
including from the Infinite Past and from the Future
where the physical body of a person is manifested
create a stable picture
or a stable real physical body
Now
so the conclusion is as follows
what is the human body
is built from its own resources
from the point of view of space-time

i.e. a person builds himself
from his own body

and if we, for example , begin to analyze
how then does the development of the body happen
how does it grow anyway

where is the flow of these microelements
is happening

then we can track it very clearly
human growth parameters
there is a body of the Infinite Future
there is , for example, this flow
from the point of view of a smaller physical condition
in more there is a big yes

and this photonic light of the flow
says that in principle in the World
here if you follow the information
relating to the body
moves
there are such levels
light moves, for example
which concerns the physical body

actually speaking by and large
this is the movement of the physical body
at the information level

For example, a person walked by
there just on the physical body somewhere to the store yes
here is one volume of information

and when does it grow?
as for this information
this is a flow from the future
there is always an increase in his growth, yes
which means that in the future it has a specific value

but when he receives this photon beam, it's like
Well, it's like some kind of
in general it looks like a kaleidoscope
you know how certain shades of color are obtained, they are visible there , etc.

and it no longer looks like a bunch there
sometimes there are bunches
and sometimes just a flow of light
this is how the liquid flows in the hose

i.e. it is necessary to imply here
optics still feel
at the level, in general, as if some models of light flow

i.e. the light flows like water in this case

and when, well, some kind of "water" ones , or something

Well, let's call it in quotes

properties of light

in fact the laws of motion are closer to a dense liquid

so when such Laws begin to be traced

we begin to see

how in what place and space

are human internal organs growing there

how does the flow from one system to another go ?

and here the question arises

here we got from the future yes

some amount of information in the form of light

the body begins to grow in a child, this means

as for the past systems

this is also, as it were, a structure declared there for the physical body

and there is already a level that has been passed, i.e. it is stabilized

so when we look at it this way

on the light-optical model of a person, generally speaking, yes

from the point of view

past tense statics

dynamics of the future

systems of flow of these photons

then we see that the body is actually

can always take a position

so in which this one, as I said

luminous center

which gives an accurate forecast of the future

favorable

means that at the same time

this center is always located

for example in the same place

i.e. it doesn't move

and always means favorable development for a person

i.e. actually the body

changing the form of information there

because if we know that the body is organized

from the physical body itself

by overflow

and with the light he overcomes obstacles quite well

then any obstacle including an extreme situation
for the body or there for other people
we can just put no
not to the level of the body

after all, what is work in information
these are some signs
let's assume there is a certain state there
or it is a pseudo state
i.e. in humans
the person has no problems but
but he, for example, believes that something needs to be done
or the real state

and all these states are looking for a person, yes
in information

and when you change the structure of the physical body
on the structure of more general development and information
then the informative context from the search engine
well, some negative event
gets into a photon beam

and a photon beam can bypass the negative
that's all

because you can forward the glow
which goes to the physical body there in the future
take this beam and just point it at the beam
and that's all

and the beam is there, it has the characteristics of neutrality

and that's the more you create
neutral level of radiation as if from oneself
the more stable the position
yours for example there is no physical body

and at the same time the data of the system
of course they spread
for any other actions

For example you have a difficult situation in the future
either theoretically or practically

you can guess yes

then you can build here
again the optical flow system

so from the known past
what is clear in this system
for example, even if you remember
that's when you make a decision
then you often start to analyze in difficult situations

did this system work before or for example no yes
how effective was it

if it worked
you try to do the same, for example

but what does the meaning of this event look like?
that there is some kind of matrix
which is embedded in a past event
you take the light and simply pump it into this structure
and you start making decisions
it could be exactly like this or something like this

but you are actually organizing
the flow of photonic elements of these
here

i.e. you objectify the event, make it similar yes
from the point of view of security there, etc.

and when this bunch
moved into the decision-making structure, as it were
then you take it and throw it over
into a real event

i.e. you are actually working with the light of a past event
in this case
and so it turns out that you
without touching the event itself
work on something else

just like God does
how does He build some kind of system of Reality, for example

He can't take it there.
from some kind of "photo night" to break, for example

He creates everything Himself.
how does He create at all

it turns out that He sets the goal of development
just knowledge
and makes sure that everything is manifested
bright and looked good for external observation

and here's to minimize the control system
i.e. make it more optimal
it needs to be very convex for external observation

then it turns out that you
as if you practically do as God does
i.e. provides education at the same time

somewhere inside at the level of there own path
You are always implementing this idea
that everything you do
you transmit in the form of knowledge
to the whole world
namely the Macro Salvation system

that's why Macrosalvation is the way
which is a specific technology

in this case it is a specific technology
this allows a person to practically receive
Well, let 's say a specific technological line
in action

and then he gets this so-called bulge
i.e. that your information is knowable
for others
your personal experience
allows you to not just solve the problem there, yes
and somewhere at the level of some of the thoughts
at the level of there control of Thought
at the level of what you mean
do you still think that having overcome the situation
you pass this experience on to others

and this is what opens up
very powerful, quite structural, as it were, development
and as a rule in this case the issue is resolved very quickly
this is if we are talking about you, for example Yes

and if we are talking about another person
basically it's the same thing, you just have to try

then just objectification
your experience or something
how did you help this person
make it simple as a management system

in your case, management is simplified
because you can show
some separate areas
and everything else is clear that it is known

but in this case I am exactly talking
that it can be done model-wise
i.e. that is what management is done for
to avoid extreme situations

but in principle it can be done
at some model level
for example, consider that this is some kind of state of a person
it may be, well, kind of unusual , yes

and this is an unusual condition
may have an extreme function
although at the same time you can feel normal there For example
and in general this is a normal human condition

and what could be unusual about it?
Well, some people have sensory perception there.
the opportunity to see arises
there space-time is at a great distance
and this is unusual

and it turns out that within the framework of my Teaching there
a person should master as much as he needs
for Eternal development
so he must also have controlling clairvoyance
to know how necessary it is

but this is already some kind of unusualness
and you need to differentiate your states

as a rule, a person at the initial level
just in case, he can admit the state is like this
Well, to which one should it be applied?

for example, the level of extreme control
because it can't be right away
Well, not everyone at least can know for sure right away
what happens under certain unusual conditions

so to the extreme management plan
also entered as if of initial knowledge
when a person is not yet accustomed to a certain situation
I'm not used to some state of Perception, for example Yes

and then when he starts to get used to it yes
what can you see there in the distance
it is possible to have controlling clairvoyance
it's normal, he gradually gets used to it

then it's already a task of extreme management
it basically doesn't manifest itself here in any way
this is already going beyond normal management

so extreme control
it doesn't necessarily mean that
something that is definitely negative
it's just some kind of extreme
rapidity
i.e. it is an opportunity to accept
first a quick, well, logically such a solution
and then think further yes

First we must do everything possible
which corresponds to alignment
as if in more known parameters
and then think that this is a good state
the action needs to be adjusted in some way, etc.

in cases where it comes to
about some real extreme conditions
which are quite possible
well close to a human in time-space
then here it is better to do the management quite specifically
so that these conditions do not occur

i.e. if we say
about some kind of personal experience or action
in extreme situations
then it's definitely better to stay in general

at the level of model actions
as if theoretical or hypothetical
what do you do if you think
that the extreme condition is connected with something

it is precisely necessary in the verbal phase
to carry out such a management system
to say that it's not that extreme there
but for example if there

it was an extreme state
then this and that

i.e. it's like in general it will provide
some kind of policy, well, protection of information, perhaps
through the verbal phase of control
where you first of all do not attract
there is unnecessary negative information for you

and secondly, you basically worked
once or twice per model level
at the level of the cognitive system you solve this issue
i.e. you don't get into an extreme situation

It is important to note here
what is in the collective Consciousness
there is a concept for example there are "solutions" to some issue
but precisely from the point of view of some general categories there, yes
but here if they exist in the form of categories
some kind of negative situations
doesn't mean that they have to happen to everyone

and here is the concept of "learning from some mistakes" there on negativity
I think that in management it should be excluded
this concept

If possible, a person should not make mistakes
then he should just move
for example, towards Eternal development
and that's all yes

He must ensure his Eternal development.
and that means if he makes up mistakes for himself there
studies the mistakes of others
This can be studied for a very long time
and the third level will be completely different
where there are no previous errors

never showed up

and what is the concept of "error"
after all, perhaps this is the action of the Soul
where the Soul determined its specific path yes For example
this always requires analysis
that's why the concept of "error"
quite a conditional category too

and therefore it is better not to make mistakes
i.e. it is better to develop towards Eternal development
precisely by tracking the event picture of this Eternity

and here is precisely the level of model solutions
so-called information states
it's a pretty good system
Well as if it were a training even in many ways
which allows to bypass the real extremum yes

and not because it is some kind of problem there
for managers who are at least there
Well, it sets the task of , let's say, integrated management
and Macrosalvation
and there is a private task
as a rule real extreme situations
it's not very difficult to get around

then the other question is what's here
precisely the task of cognition
where a person should know anyway
how to get around these situations means

and in order to have some experience
he must definitely I call "model"
i.e. as if constructed artificially
i.e. the situation that really has no impact
per person yes
it does not worsen health there
it doesn't affect him in any way

but at the same time he takes
and as if due to the primary level of analysis
well, the conditions there let's say some information
thinks that just in case it would be necessary to work it out
what if this is an extreme situation

and this is where experience begins to be gained

when a negative event does not occur
and complex management
to reflect the possible negative level there
increases
without touching on the essence of the process

i.e. a person is not included in the model level
i.e. he does not realize some negative situation
for myself

because a person must anyway
gaining experience in development means
and at the same time, for example, he shouldn't suffer there
he shouldn't be gaining experience
due to some mistakes, etc.

means that if we talk about it, for example,
well, let's consider some kind of Infinite Reality there
some kind of control systems
so we expect some kind of extreme there
there For example there is some comet there
we must understand
what does it mean exactly planned event of a person
it should be like this
that he analyzes just in case
what can happen yes For example

and it turns out that it still works here
some kind of extreme long-term management, etc.

or is there just an analysis of some situations there
it's still an entrance
to a certain level of overcoming the extreme
or a specific person or helping other people

and it turns out that in this system of extreme control
on the one hand, to fix in the collective Consciousness
this job well it would be inappropriate to do it once again at least
so as not to create development precedents
this form of information
negative perhaps

and on the other hand
a person must clearly know at the logical level
he should be able to calculate everything that can be calculated
he must create
namely some logical conditions of work

and here is this system
namely, management of extreme tasks
it helps quite effectively
create systemic sustainable management
without getting into any kind of situations
without doing for example there are errors, etc.

because under management conditions
making mistakes there is a waste of time
and in principle the point is not even that
the concept of "mistakes" is often different for everyone

and the action of the Soul is also different
different levels of understanding of that
is this a mistake or is this done for
well, some longer, well what about control systems ?

This is where we need to identify
some kind of long-term system or something
possible precisely the impulse action
such a plan that this impulse comes back to you

and maybe you are the opposite of this situation
for example, it was once needed yes
then it turns out whether it is a mistake or not
this is just a philosophical analysis

and it turns out that it is important to simply track
Norm of events
i.e. first you need to do
and then we can speak with criteria
whether to attribute this to a mistake for a while or not
some action

and it turns out that well, you can say that
that from the point of view of such and such a model
for such and such a time
this can be considered a mistake yes
some action

and from the point of view of the distant future
on the contrary, it's good for example

and it turns out that if we start to analyze
here in conceptual systems

what needs to be done is this
then here in the system
namely, management of extreme tasks
or let's call it that way as well
and in the extreme control system

It is important to understand clearly here
that we must have space
where there are no errors at all, i.e. they are excluded

and it turns out that we need to exclude
error structure
we shouldn't change our minds yes
should not change positions

and therefore here is the light of the Soul, for example
which shines for example towards you
from this generalized point
Light of the Spirit
as you approach this point it becomes
by you

i.e. you just see yourself in your normal form
well, in a whole personality

i.e. how God created man
you can follow this example
proceeding from Himself He went to the level
maximum concentration of external Reality
and basically received Himself there

i.e. the second signal
the same person
he just extended this path for now
up to this point in the general area yes
it turns out before Him
then the world has changed
and the modifications of the World created this image of man

i.e. it turns out that you can always understand
why does a person have this or that appearance

for example , a person was born
there is a structure of the World
it is clear what appearance the next person will have
who will be born next

because this level is from the world
which goes all over the world
in the Image and Likeness of God
it creates a specific image
the specific path of development of this person

and gradually we can see more and more clearly
For example well how are people in general
in my understanding
perceive God

i.e. it turns out that people are absolutely clear
see God physically
i.e. physical vision
and perceive it in the same way completely
thought and physical vision are the same
when the number of people is infinite

because the more the form increases
every next one who is born
the more the form corresponds to that
that she is approaching the form of God, yes it turns out
just logically

and it turns out that the more such people there are
the more we see and understand it

but we do invest
The spiritual meaning is not only physical
and therefore physically
people will still remain different

and it turns out that this is the ideal form
when all people understand
that there is an infinite number of them
then they spiritually perceive God immediately
and there are completely direct transmission systems

how can they perceive
that there is an infinite number of them
all the time the world grows and expands

they must be absolutely sure
that they are infinitely evolving
that's all
then at the level of Consciousness they know

that there is an infinite number of them

so that's the level of development

this local or something dynamic level

dynamic level

when a person is absolutely sure

that it develops forever and nothing will stop it

this is this level of direct vision of God

this is that he takes information directly from God

Human

and that's when we see this level

i.e. the level of Infinity

which seems to have been created almost by people

i.e. the level means recreated

or there is a newly created one

or there is a developed Infinity

this is already a sufficient level

in general, such dynamic management

very clear specific

Well, let's just say that it's a strong management

even so fast somehow

in the dynamics of the emerging connections

i.e. you have to see it here

what is the control light for example

this is a human action

i.e. physical action of a person

for example, a person can move his hand

and control light

for some kind of mobile systems

this light is almost like that

what well For example there is a continuation of the hand in action

Well, for example , God has a continuation of the Action

this is the whole world always

how can we count God what He does

for example in Its Action

all He does is the whole world

if we go by analogy

then here is the action of this coming from the light
from the human hand
it is still some kind of reaction of the World
by analogy with how it happens with God

means to control
these are exactly the kind of fast dynamic tasks
by some external control
this is first of all to tune the physical body
that the entire physical body organizes
it's precisely this dynamics of this light or something Yes

that any action is that dynamic
which is embedded as if inside the physical body
into its form and development

and it turns out that when the shape is ideal
i.e. exactly an infinite number of tasks
and they are resolved precisely in the structure of Eternal development
then we get a fairly simple technology
well, which really requires a special effort there
that I could perceive it at the first level
control

that simple technology
which helps to very clearly identify
the long-term consequences are not only there
there for you personally yes in some extreme situation
but also for all people

i.e. you start to see
what when for another person
for example, the situation in prognosis is normal, yes
that means naturally nothing will happen
negative there or sharply negative

i.e. it turns out to be the opinion of at least one person in general
Well, let's say that's what management leads to
that management becomes sustainable

why is clear
that God created exactly in the form of man, yes let's say so
level of sustainable development of the world
and it turns out He could only create in His own Image
from a logical point of view
this level of extreme management

because in this case
He could look and see
that person is calmly doing something there
then everything is ok yes
diagnostic criterion from the point of view of that person

that's why there is such a level in principle
that you have to try to treat it
from the point of view of situation analysis
as is
Well as if the level that a person tries to relate to
as if the events were related to him or something
as to yourself

i.e. because in this case you see the structure
how can one person help another
i.e. the level of a specific technology
where does the transition from desire for example take place Yes
to the level of technology

there is a desire of God to create some kind of management
and it turns out that this management is like this
what does this control mean
it goes into technology somewhere

the same thing when I saw well as if as myself yes
another person
you are between the level of "see" and "do"
you get the whole technology at once
here is a fairly large one
often it's a lot of technology

and here based on this
you choose a specific path
and move to the level so that there is no
some extreme action yes

i.e. this is how this idea works
which seems to calculate some kind of situation

if a person is clairvoyant for example
Well, I developed controlling clairvoyance
to solve some specific problems

then he's already starting

generalized universal level
from specific he starts to get into
into the system of generalized systems
where practically, well, instantly, so to speak
you can see all the consequences of some action

and that's when the changes happen at an instantaneous level
i.e. it is visible
how exactly is this such a fast level of enumeration
in management

it turns out that when there is an instant change there
happens yes in the external Reality

and the transition from Soul to Spirit
or from Soul to body is also an instant system
because there is no border as such
this means instant action

then the person becomes synchronized
to the Infinite World
which means he is Infinite
nothing can reach him

i.e. nothing in the World can bring
then there will be some harm to him

just like God does, yes

and the application of this system
it allows this action
in principle, many issues can be resolved very quickly
there starting from healing there
and further there in event management

it is precisely because of this attitude towards the World
that there is nothing in the world that brings harm

but thanks to today's lecture
you can tune in to this level

This is where I end today's seminar.

Thank you very much for your attention
