

GRIGORY GRABOVOY
The Teaching about God
Managing the information expansion area
11.05.2005

Hello again
the topic of my seminar today
this is my teaching about God
Managing the information expansion area

in this particular context
I view management this way
that when we do management
then the areas of information expansion
This is a special control system
which allows us to generalize

i.e. making private management
monitor remote areas of events
including long-term events
i.e. your personal events
as well as general events

i.e. in fact, this is what we are talking about
that there is some increase in information
and if you make systemic management
then you need to be able to manage this increase in information

and it turns out that when we do
generally speaking, any control
then the management itself causes
increase in the amount of information

and there is also the whole system of external events
which also changes
and the amount of information increases

i.e. we are talking about the full spectrum of management
this particular area

at the same time your control system
it is highlighted as a kind of private level
i.e. a certain level of well For example there it is like a cylinder
where there is target vector control

why exactly a cylinder in this case and not a sphere
because the distant region is more spheroidal
or there for example sparse

and therefore his own private system
precisely in optical perception
It's better to make it more cylindrical

then highlight your sphere
there will be a more specific canon
and you can control your area
in interaction with the growth of information

in this topic an important aspect is that
that there is a certain level of management
in the Soul of a person
where are the areas well as if unmarked
in general, such a concept as "information" in general

i.e., for example, the level of manifestation of such irrational systems
where there is a sensory level
where is there a level of purely human plan
for example level well manifested so
as we suppose there is a person's conscience, a person's action, etc.

and when we start to analyze this area
then it turns out that there are areas
which seem not to change at all

i.e. there is the concept of a "static area"
this area exists as if by itself
and there is no movement at all around it

i.e. it is important to identify here
It is this status that is controlled

for example, as God does
It manifests the management structure in this way
that He actually organizes any movement Himself

for God to create His own movement
these are His own tasks

if a person, for example, perceives in an investigative sense as
as if something was happening from the outside

on external tasks and problems

then God must create more
and optical expression
and organize your system of Perception in this way
to create within this system
for example some movement

it turns out that from the point of view of this ideology
the ideology of God, yes in action
treatment of any disease

for example from a human point of view
it is to be able to recognize, as it were, one's own picture of the World
how a person perceives it
by analogy with how God works, let God perceive

i.e. to move to God's point of view and see
static structure
where, for example, there is no disease

and that's when a person begins to recognize
this structure
the disease may simply disappear, for example Yes
how to disappear actually just heals yes
in logic, this is precisely the kind of deterministic one

and it turns out that when we start
do management by aggregate tasks
Well let's assume we ask such a simple question yes

There is a concept in humans, the concept of "conscience"
but for God what is the concept of "conscience" for example Yes

i.e. from this point of view it is clear that in many cases
the concepts of man and God
intersect absolutely clearly

for example, conscience for God is conscience for man
or there is a feeling of Infinite development
i.e. Infinite development
that for God it is one yes
God is infinitely evolving

but for a person it is the same logically
if we say that a person is infinitely developing
it means the same thing

and it turns out that if you build this staircase, ^{yes} knowledge
for example, by comprehending the Truth ^{there is} Eternal development
it turns out that what's important here ^{is well} how to use
concepts are comparable
this is where there is uniformity of action ^{yes}
uniformity of perception ^{yes}

then you can calibrate very clearly
how for ^{example} does God develop living Eternally ^{yes}
how does he even do ^{this} to know the technology

and here are my personal tasks
why for ^{example} from this point of view
a person sets tasks for himself there or they ^{seem to} arise
he has ^{yes}
and he does them, ^{yes}

here it turns out that it is important to see here
the nature of the tasks that are defined
not only ^{in general} there by the personality of the person himself, ^{yes}
oh and the fact that a person interacts with an external system

i.e. the person helps ^{there for example,} people live
helps to have good health
or simply restore health, etc.
or organizes
some social processes ^{yes} political, etc.

and it turns out that if we start
these are the processes that need to be implemented in terms of knowledge
how to do it from the point of view of such Laws
how is the law of governance there
here is this additional mass ^{yes} information
to your task

then here you can see that in this concept, ^{for example} Yes How
as I gave an example ^{for example} there is "conscience"
where is the structure ^{well} there is an unshakable
this structure and all of it ^{is not} developing
there is such a concept and that's it

there is a concept ^{there let's assume} Well purely human as it would seem, ^{yes,} the
principle ^{there is} "honor", "dignity" of a person

there are some very specific concepts
as if only for a person yes in his social life well

but but from the point of view of these concepts
information it practically does not develop
i.e. for example there honor is always honor yes etc.

and when we start to consider
such are the phenomena
Well they fit better with the concept
can sometimes be irrational action
where the level of dynamics is expressed in an irrational environment
i.e. the level of development and the level of compression , so to speak
he is one and the same
i.e. the level of output of input information
almost at the same speed
we see only a fixed system in optics
Well as we see it technologically

although the irrational spectrum
this is a more generalized spectrum
and there is a distant Action of God, as it were Yes
just on information remote from a person
as some kind of neutral action

and a person can transform information
get any action as if

what is the advantage of an irrational environment
that you can always get
any action means Well creative type of course

and in this case
if we reason in this way, for example
Well we see information this way
it turns out that this so-called
Well, let's say there is an increase additional information area management
this is the level that generally speaking comes from
from some rigid postulates
which a person perceives personally

i.e. the internal level of Perception
just like God perceives personal information
He is the one who implements it.
to the level of Perception

if you think about it
how He builds his own Perception
it turns out that He is building somewhere
at the level of only a reflected signal, yes

i.e. He shows His system of Perception somewhere
someone understands her
and He He is already tracing the entire cause-and-effect system
has a signal as if to itself

but it's such a complex system
I explained here such a fast level of control

it turns out that God
must constantly develop information
i.e. expand it yes
in order to perceive one's own Action

because every next Action of God
it is always an increase in information for a person

but from a human point of view
For example there take the physical body of a person
a person is always doing something
but the physical body is always one

here is God
in the status of Soul
there is a level that does not expand either
i.e. well as if it doesn't change, yes there
For example there is a concept that is similar for a person
with the concept of "physical body"

and it turns out that it is kind of sensual
Well irrational level of God
perceived by the human physical body

and indeed when a person begins to think
for example, how do processes occur in his physical body?
he often comes across some irrational meaning

i.e. many actions they do at the same time
and harmonious
at the same time they are there on a Macro level, so to speak
and at the same time a person, for example
he can't always recognize it right away

or doesn't want to recognize it right away
how is it all connected

here a small nuance of this kind arises
that a person in principle knows about himself in his Soul
but for some reason he misses it
line of often complete recognition of all connections
at this moment

i.e. it allows for external influences
he creates his own concentration on external information

Well, if you think about it, it would be like
even precisely in the sociological aspect of human action
it turns out that he is a lot of well from what he does
he does it as if he is deliberately giving external information
enter into its information or control structure

it turns out that this outer area
it kind of forms and attracts itself

and it turns out that he mainly contacts that area
with which he had already worked beforehand
Human

and so if we want to find the reasons
For example there are many diseases there
why does this happen to a person
maybe not even in a cause-and-effect system
and in general in the statics of this phenomenon

if you need to improve a person's health
need to see
how did his work with external information take place
before he was with her, like, obviously
at the level of the systems adopted there
met

i.e. external information is one thing
some increase in information
and preliminary work
there with the Soul for example
In spirit yes
there by the elements of Consciousness
or there are often fragments of Consciousness
work in progress

i.e. they often work discretely
and here are the systems of Consciousness
he can bring a person out
the structure of Consciousness into some element of action
and then get the result in this element
already as if overgrown with external information
Well like some kind of snowball yes

i.e. the matryoshka principle
i.e. external information is growing around there
and he already studies and either accepts or not
but in the center of the system
and a fragment of one's own Consciousness is found

if you take care of this information, as it were
Well It seems arbitrary, yes
every event of the World is infinitely increasing with time

it turns out that inside each fragment
there is an element of human Consciousness
but precisely the person who observes this process

in this case I showed that it is like a human action
and in general according to the Law of the structure of the whole World
in the fundamental plan of the World this is how it is

i.e. fragments of the action of the human Soul
and in general the whole Soul of a person is often revealed
in some action

there are events where a person approaches
Well as if with the Soul yes counts
i.e. he perceives that he acts with the Soul

and is he there? how he perceives certain events abstractly
and then it turns out that the event is projected
as some kind of mosaic means
within each segment
there is an element of human Consciousness

then it turns out to build, for example, an external event
take control yes
Well, this system, well like such
there may be quite large event masses

because here the increase can be very large
if there are many events
accordingly, the increase in event capacity is large

here you actually need to reflect yourself
Means into this system
and get a return signal immediately
Well like in the implementation system
there is a person's conscience there static system
signal and return
it's almost the same action
there is no movement there

although in reality
This is a very powerful concentrating processing system.

and it turns out that if we
Let's approach the human body from this point of view
and let's look at how the interaction occurs
between human cells for example Yes

then it is enough to follow
where there is signal slowdown
between individual cells
and a person can be healthy
if we keep track yes we can recognize this point

i.e. one of the principles of actual healing yes human
this recognition is like a slowdown Well some signal
where is the distribution
there is a vector, for example, going from one cell to another
for example slower
than going from another to the first cell

and then it turns out that as soon as we start
understand this structure
then in principle we will standardize it right away
because to understand this is to immediately normalize

and when is this action already being standardized?
then in principle a person gets into
in quite well in general, it 's a big protective field or something
at the expense of one's own Consciousness
where he can solve more problems

in fact, everyone knows

that the more people there can be
the more problems he has to solve, yes it works
Well or at least he can decide

and the concept of "must" is his personal status
and that's when this concept of "must" already
is being brought into control
then this is management
external Infinite status of events
but under human control
and to a greater extent the management of the Soul of a person

i.e. the person takes it for himself
this large, as it were, developing Macro level
as if external information

it outputs the spectrum itself
and this is often seen in a completely linear manner
it's somewhere on the left side
well, that 's not it like a bit of a bluish-white color
glow
spectrum of all external tasks
and in all external tasks he chooses for himself
some systems of action
and starts to act

i.e. a person acts all the time
with a generalized coordinate system

that's why I say that the Macrosalvation system
i.e. to make Salvation for everyone
this is actually to level out, stabilize the system

because you're working with it anyway
the only question is
what are you for example you do it managerially
and managers, that means, experience is passed on to others
immediately instantly throughout the entire information system

or it happens as if by itself yes
some kind of there in some kind of such variant
automated control level
due to the memory of the body cells, etc.

but this is already a generalized level

like an average level of statistics
and so all the bodies act there

as soon as it is translated into Consciousness
you add experience to everyone

and this is exactly this addition
that's it, well the quintessence itself
how does all external information develop in general
where does it even come from

all external information
from this point of view from this position
with this management model
added by your personal Spiritual initiative action

i.e. if you think about it and look
for example, just look at the information as if from the outside
and well do nothing yes observe
is it growing or not growing
it may not grow
i.e. it can be in one place

if you want to follow
here it started to grow somewhere yes like a sprout there
well, wood for example or crystal

then entering the system
you will find that this is your initiative action

first of all, perceive growth
This is your initiative

just like God does
He perceives what He Himself does and yes
for Himself

so that He may perceive
first you have to do it then you have to perceive it

and when you kind of start to act
then God is in order to do something and then perceive it
He must first simulate this Action.

and for God what is modeling and what is Action
it's the same thing

and for Him this process is as if one
Well in one action He does everything

as soon as you start
the process of modeling and accomplishment
well, how to connect it, yes
at the level of projection onto the physical body
you begin to understand
how the Physical Body works
for example, there is the One God
so that the process is understandable to people

i.e. He is then forced to parallelize it somewhere
Well hourglass principle yes
He should do the opposite action.
already accomplished in monolithic action
at some nodal point start parallelizing
to the level of a kind of plan and action

and when for example we begin to see
where does this happen
for God everything happens in one time
what's the plan
what Action
that the implementation of the Action
For him the concept of "time" is an input coordinate
for God

it turns out that if we find a place
where time is controlled in this case
then this is one of the levels
login to management well technologies there Eternity

For example, there was a concept of some kind of "ambrosia"
there are liquids of Eternity yes and what did she have to do with it
Well so in various legends
in that place where time seemed to stop
according to the level of movement of the sheet
i.e. they found this ambrosia, as it were
where the plant is not subject to time, and there , etc.

and that's why it turns out
what if if we follow this logic
then here well indeed, apparently
at the level or something some kind of predictive system of Perception
such models could be built in management

to convey some information to people

because it is precisely some kind of time sink
where time has a golden color, so to speak

if you think about it, where time is controlled, yes
more manageable
some spectrum of time

i.e. the most manageable
as if in the first control option
it is golden in color

why, for example, were they connected with gold
many events yes in the history of civilization
Well which seem to develop a spectrum of events
somehow the development of social systems occurs

there is also a connection between time and social level
because well time
it is also a correspondence to ordinary events

and for example, if a person needs to improve his health
or let's say there is a need to do some more general action
normalize an event
make events as if Well normal
from some more radical tasks, yes problems

you can use a spectrogram, as it were, even
Well or spectral system
in the form of just individual flowers of time
you can use communication systems
between blocks as if separate time structures
and events

and then it is clear in this case
that the increase in the mass of information yes
in relation to one time
it will simply be information of space

after all, the task is this
that time does not change but events grow, for example
then we are dealing with space

if time changes and events grow

then it turns out we have
as if with a simultaneous process of development there
time and space

but if we take each time segment
we correlate a certain number of events
then we clearly see the growth
Well, this is a normal quantitative problem

and when we begin to see
in this case it's management
you just have to see it all

when we begin to see
what is golden color for example
this is the color of the development of events

For example there is a golden yellow color
golden yellow sun yes For example
and the phenomenon of photosynthesis occurs
and are associated , for example, with the development of life

but green color is also there and basically yes
development of life, for example, plant life
in symbolic form this is also life

it turns out that if we start
switch to another color already
through for example the structure of the plant
let's just go into the structure of a plant, for example
from the structure of Consciousness
and then we'll take a look
how here the time processes seem to bend

you can see what's inside the plant
time
from the point of view of external perception
has a certain curved character

that's why some plants
Some grow there more in time, but others grow less
it is possible to trace the dynamics of time intervals
well, from the point of view of the logic of Perception

and now if you go from here to the management
then it is clear that we can

through there one plant practically there
in general through some one but cognized level of information
now record all external events

and as soon as we find this management niche, ^{yes}
then in fact any other system becomes controllable

because it is enough to identify
one particular case that would be understandable
I just brought it ^{there} For example
to the structure of work through the plant

you can work through quick action ^{there}
you control some level of events
just highlight events in the spectrum
^{For example} some local link
^{Well} some kind of simple optical movement system
there are a lot of events inside

and the main thing for you is to perceive this system in the same way
what have you learned
her connection
and all external Reality

then you immediately understand
all information development systems
i.e. you record all additional information
which is growing at this moment

i.e. as long as you understand
and the information is still growing
and you should understand somewhere ahead of time ^{yes}
where information exists for the entire future

i.e. in fact we are talking about
what you should in the forecast option
understand know the future

then there are no problems at all
you looked ahead, you knew the future
you don't need to have speed characteristics

i.e. you then just work on everything
in a static environment

and for ^{example} there are treatments for diseases

enough for example there are also complex chronic ones
or difficult to treat
or those that are considered serious diseases there

There is one very powerful method of treatment here
in this control system
that from the whole spectrum of additional events

and additional events
what are they in general Well let's say it's a certain characteristic
that it is not the future tense after all
this is the current time
events are just building up but there are a lot of them
and you can choose from them yes

so you take and allocate
some closest
but with a positive connotation
event
and very powerful action
you take it as if you were building a positive level

i.e. you are ahead of the structure of future events
those. recognize space
which is not occupied by any information
and you take and bring out a positive event there

i.e. you build your future in that place
where there is no resistance
your positive future

when did you do such an action
you are here well here as if you received such an action
similar to what God does

He practically does not share anything there for Himself.
current time future
and for Him everything happens in the form of a Macro task, yes
For example, him there is Eternal development of people

and when you look
further development tasks there
any objects of information Eternally creative

then it turns out that this emission is like an advance

this is actually ^{well} some function of the physical body
which already exists
a person and also in information for himself
always builds events

and then you are already from here
having come to the physical body ^{and} to oneself actually
or any other person ^{there}
we begin to understand
the structure of interaction of the human body

^{Well} somewhere even there we will say
level of such intellectual action
i.e. there is ^{well} some kind of mind of the body ^{yes}

or maybe there is just such a mind in Macro understanding
there is something there that is, ^{for example,} the mind, ^{yes} , at the Macro level
^{Well} there in the collective Consciousness
not even for a specific person ^{there}

what is a smart move there anyway
^{there by} reasonable action

here from the point of view of plant growth
also a reasonable action for the plant

and it turns out that we come
to some ^{well let's say} the average parameter
which allows any action to be controlled from the outside

^{there} is no concept of "smarter" or "you need to learn something"
and there is simply a concept of "control"
i.e. there is a concept of "control" over external information

and that's when you cross over
to the level of ^{well} It seems to be closer to me
to the physical body
then a level of even greater control arises
and when you actually feel it
the acting body
acting in the Spiritual plane

control is carried out

i.e. your Spiritual level
he is at the docking level

with the physical body it turns out

i.e. your Spirit and physical body

it's a single action yes

unified creativity for example there are human souls

of your Soul

or even Souls, so to speak

manifested in the collective Consciousness

collective action

because many processes are done collectively

For example there is a complex design development there

everyone does it individually

but then a specific model

where everyone's work is invested

or is there a social movement yes

and then it turns out that the generalized action

it's like Well stops making a man

as if isolated

his body or he himself

perceives generalized experience

and all the best experience

which corresponds to for example there is no human life there

so the more we invest

to the social level

there are technologies for example there Eternal development

the more people begin to live Forever

and here it turns out that based on this

we see that in this case

man this level of privacy is a certain yes

it only has in the structure of the address to itself

and in other cases

there he can act socially

being as if in an Infinite system

and then he does not miss any control system

he constantly lives in the structure of Macroinformation

i.e. none of the elements

information

it doesn't escape him

i.e. it is constantly in the structure of Macro-action

and pay attention
that as soon as a person is somewhere

Well there may be a number of reasons there
this level starts well like Macroharmony or something
periodically well somewhere or not to pay attention
or somehow starts to lose there
maybe even accidentally Yes

this is where some problems may arise
in terms of introducing negative information there
well, maybe about events or some other issues

i.e. this is precisely control
in terms of sorts or what? universality of action of such
so that it wouldn't be tiring yes
but he still had to be so real, yes
so let's say "productive" such a word can be used

then periodically in such a control system
it is advisable to enter the Macrosalvation system

here's for those who are involved
the system of Salvation according to my Teaching
It is advisable to periodically enter these systems

this is a very positive level
example, for there simply for even health improvement there
to improve events

if the person is already healthy
then at least he can see
control all his events as much as he wants, for example

and there are systems of interconnections
when some series of events well let's say yes

because free systems are social
free levels well as if external information

and so it turns out that in order to correct the event
next action yes
straighten things out
which for example were implemented in a number of tasks

this is where the action begins
which means it is built in this way

that the signal is coming in relation to the event
Well to the event that needs to be corrected
this is a signal coming
from point well as if access detection
i.e. the event of negative information itself
maybe somewhere in one place
at some point you perceived
as a rule, this place is more manageable
and here the event is downplayed
in some negative consequences

and you exit through another point
you start to manage

and from this point of view
for example, if you look at it there, well sometimes on TV
there they show footage of a nuclear explosion
some kind of nuclear mushroom appears

for example, ask yourself the question of management yes
if some silhouette or some image of information appeared
which we don't need yes
we need to make sure that this doesn't happen
then how to manage this system

Well, it doesn't have to be this nuclear mushroom cloud.
there may be some other problem that we don't need

then it turns out that we should
make a capture of this information
as if for the level of development precisely in the structure of the future

if we perceive information yes
elementary
what is the future for this process

for this process
the future is further into space in time even

right there for example, some negative effect occurs
we just move on in space
into the structure of Consciousness

one system of Consciousness records here
the other one is increasing

so here is where you need to learn
be able to expand information in general absolutely accurately

those. here you need to expand the information so much
to take control

Well so that for example in the future this does not happen yes

this nuclear explosion

this means a fixed rigid plane of the future
and it must be completely controlled
future level

the following options are not allowed here, for example
what and here it is the third one
or something like the following yes

and it turns out that there can be no third options there
there must be an absolutely laconic clear future

and here the following plan option arises
here is a platform of a tough future
and it turns out how then the details of the events are yes
your personal ones for example

because if you are concerned about your own future
it turns out that here you need to spend more time on that
to see myself there well some milliseconds
then watch your actions

but you control the situation
well from the point of view of Macrosalvation
you still need to expand the events somewhere right yes
develop this optics

it turns out that the future should be unambiguous
completely tough
fixed and favorable for everyone

then it turns out that this system
Well some platform or sphere
who imagines what

it needs to be developed to be perceived just as clearly
for example, how does a person perceive his physical body there
as he remembers, for example, there is a favorable state of the body and

Well as a rule, a person has a favorable state of body there
but in this case he needs to perceive
when for example there is
if you go to the logical diagram yes
For example there is "unity of Soul and Body", for example
such a term can be
which can be used
as a logical model

the simplest element is just in this system
i.e. in this faction of Consciousness
look at yourself and that's it
how to see myself at least start to see it that way

By the way, this is a very powerful element for developing clairvoyance
this is the fixation of a hard future

and clairvoyance is a pretty useful management structure
you can then the cause of any disease problem
find and restructure yes
in Norma to conduct management

so here it is enough to take a look at yourself
simultaneously with fixing the platform
i.e. such technology is quite simple

and then there is expansion
you will see information will happen
in many ways even spontaneously

i.e. it will turn out that you will be able to see
practical development of information
in many ways in this way
that this beam is actually informative
it will expand I think in this way
what you will see is how it expands
thanks to you having done the initial action

i.e. here you need to practically see it
self-propagation of this beam of information

and then when it reaches you specifically
i.e. you see there in the distant Infinite future
he reaches you
and you are already starting to see
well, practically there is a structure of Eternal development yes
all elements of information

i.e. to see the structure of your personal Eternal development there

and it is precisely the technological nature of this action
begins to take shape in this way
that you practically start well in general see here
by and large this very connection
exactly that harmony
this is the Infinite Future
which exists in principle at all yes

all in general Endless information
which is concentrated somewhere in the distance
like light for example
and this information just shines on you

i.e. you actually see yourself according to logic
myself
but at the same time you don't specifically consider your image there

i.e. you work at the light level, for example Yes

and when you start to try to recognize
then you see absolutely all the specific problems
there they are quite clearly visible
they are quite clearly manifested in this case

i.e. there are problems of the first order
there is some other plan, etc.

and often these problems, by the way, are not even entirely your personal ones
You may not perceive them as a serious problem
you see how others perceive your problems

what is a problem for others
in terms of what they think
that you have this problem
but that's their point of view
i.e. their as if expansion of information

and it turns out that here you can observe
behind the structure of events
from the point of view of external observers
or people helping you

and then your spectrum of action increases
because when a person acts
from my personal point of view problems
this is one of his personal actions

by the way, not so many people
especially those who are involved in Salvation
they are doing their own thing there
i.e. they either don't have time or they are embarrassed there , etc., etc.
and as if

but in fact, if we consider
from other people's point of view
then it turns out that you
in fact, you normalize their Perception yes
i.e. you well give them the opportunity
don't do anything don't focus on your problems
and solve your problems

i.e. you actually solved your problem
from their point of view
but in reality it often coincides
that this could be some kind of task
which you may actually need in solving the problem

you need to solve it

and it turns out that it exists
another kind of social level of information expansion
about your tasks

this is other people's point of view

and that's when we start to analyze
how is it formed at all
this point of view

how to make it so that there
for example, a person did not die but death stopped
and from the point of view of all the people there
from the point of view of their personal actions, for example, yes

it turns out that everyone perceives
any of the reasons
the collective management system perceives
well, like a complex reason at a certain level
and in principle the solution is always ready in reality

i.e. collective action can always overcome
it turns out that any death is practically

because it works here
that's the breakdown of information
to the level of growth of the following actions
i.e. other people who live
they compare it with their healthy body, for example Yes

Well maybe everyone evaluates it differently
your health
but at least they are perceived as living people
and living people always create life

i.e., like this kind of investigative system
if you build up
Well in general at the collective level of society management
it turns out that we always have exactly the life line
i.e. exactly the line of life that they organize themselves
the people themselves

here, here, when we already
there we begin collective management
actually so to speak, to organize
as a system well in general, the actions of the people themselves

i.e. any increase in information
consider first
collective creative action of people
and actually kind of teach people

i.e. to be able to create
this one here well the road to Eternal life, so to speak, in this way
that we, through solving our own problems,
precisely in the universal sense yes
we help other people

all this looks real
here is a general understanding

under direct control
how simple is it to work through Macrosalvation

First they helped everyone
then your private tasks
without figuring out where who does what

and if you go into detail, you can see
what is the solution to your problem there
you help another for example Yes

Firstly, it is logically clear
you are passing on some experience
in Macroinformation
you are already helping by doing so

Of course this experience can spread in different ways
there slowly or there quickly
if you say it in words it means fast
conveying more to people means even faster, etc.

if you just do it and don't tell anyone
sooner or later the experience will be spread anyway

so it turns out that the solution to the problems
it's always well certain knowledge and transfer of knowledge
and if you think about it like this
well, like a fundamental philosophical thing
or even philosophical and applied
or the practical meaning of the action

like God in general, for example
God also sets tasks
make sure that the problems are solved
but there wouldn't be any problems there
which would be very tough
there wouldn't be, for example there are no fatal problems for a person

i.e. how then should He set tasks
and how to understand the tasks
so that development proceeds intensively
but still without any excesses yes etc.

i.e. this is basically if you solve this problem
at the management level
it turns out that then a person

will not have any sorrows, troubles, etc.

here you just need to understand this line
where is well as if actually transferring
irrational form of information transfer
and where should it be taken at what point

here at the level of the action space
it's all very simple
we need to track down where to receive information
the one that God put into some kind of management action yes

here it turns out that
Firstly, it is important to highlight the spectrum then
this is a purely pragmatic simple technique
highlight for example there is some kind of light blue spectrum there

i.e. God's action means

further precisely in the structure of information growth
this is still a method that concerns
we all the time
Well namely the increase in information
we are constantly working in a system of growing information

i.e. we are there all the time
as if in a system of increase
Well as if some kind of vegetation were growing
and we are constantly increasing in action yes
i.e. our action is sort of local
and the amount of information increases
then here is the blue spectrum

if it is a static action then it is a golden spectrum
we need to clearly see and distribute here
this information

for example, we are in dynamics
blue spectrum
then we just find a place for everything
where can we find out this information
we define ourselves well as if we see ourselves so let's say yes

and what kind of technology exists here
if you see

from here we see the point yes

and if we perceive
we must perceive ourselves in our full stature
i.e. do not reduce your height
i.e. precisely to perceive
that we are standing somewhere there and perceiving
some information

If you want, you can even choose the geometry
there on the planet Earth naturally
where there is oxygen
how so create some real conditions there

or you can work simply geometrically
in this area is a fragment of Consciousness
which is activated by some level of glow
well, a beam coming from here in your direction
and that's all

and it turns out that you have this type of control there
what do you already understand here, for example
what needs to be done next
i.e. you have
a certain level of predictive action

as soon as prognostics begins to be objectified
i.e. well the next action occurs yes
then you did the controls correctly

i.e. the next action grows
because you did the action
for process management for example there is no future

you understand what God's task is there
and the next action opened up before you
i.e. the next path is yes the next road is there
the next step needs to be taken

so from the point of view of information growth
These steps should be managed by you personally.

after all, God gave it to you in some way
well, maybe that long one sometimes
gave way
how people perceive

sometimes it's quite fast

but in principle, in fact, God gives
in essence, God's Action consists of this
that from God already at the integrated level
Perception is coming here
after all, nature is perceived as people and some actions
often at a general level

and among these systems
choose the level that is yours personally
for example, here's where you need to go, yes let's assume
what is the next step to take for example

here are all the same markers well these are the dots
where you often need to understand
how to move

but in principle this action is quite simple
you learned to do something yes For example
once
well, i.e. the person learned to ride a bicycle
he drives all the time

if you learned to do some action
done and you got it further
The endless development of some action

they can develop systematically all the time
and there are no problems yes
but a person needs some next action
he is learning the next level

and here again we need to realize and understand
what God builds yes
from the point of view of the Macrosystem

and next time it might be a completely different path
maybe you don't need to look
neither dynamically nor statically
maybe we need to consider the opposite
how God does from the point of view of just your Perception
just look at God what is He doing
and know it directly at once

i.e. in this case it is already

Spiritual growth Spiritual development

and then the third way arises
which you define for yourself

and it turns out that when you start
Well , let's move in this system
as if there was an increase in information again
i.e. developing information

with all this
by the way, this is the control system
please note that you are there all the time
in a certain, as it were, informative suit

i.e. some white glow systems
sometimes golden in color
they arise differently even around the human body
You can even see it spectrally

when he works in this methodological system
he often has well some optical systems
near your body yes they can be recognized
then you can even understand
by what method is the information applied
i.e. in what coordinate system does it work?

and based on this one can recognize
any even external object of action

here if the information expands
you can tell by the light optics
what happens inside each piece of information

after all, you had, for example, a management goal
some cylinder yes
you could enter inside this system

recognize your action
and carry out specific management there

get specific control there
which can be implemented without any problems
for example on information
do you understand that this is happening
you need to do some things

you will do it anyway

i.e. you know in advance
that whatever you do
you will do it anyway, it turns out right, ^{yes}
you'll do it anyway
you just have to clearly understand and see

thing here needs to be highlighted
such a phase ^{or something} forecast
which is clearly very focused on you
i.e. you understand that this will happen

here's how you can understand this, ^{for example}
i.e. find a strict one hundred percent future there
not only to find, but to perceive at least often
perceive accurately
this is also very important

often accurate Perception gives
it is precisely the opportunity to act already
Well, it's quite calm ^{there} ^{yes} definitely somehow sometimes

and it turns out that all external information
it doesn't affect what you recognize in the future

well for example ^{there} you fly out on a plane
see that you are landing and exiting the plane

you will come out anyway
what difference does it make there is shaking
or is there some kind of shaking while driving or not
it's not really important at ^{all}

you can study in peace
something on the plane some calculator
and don't pay attention ^{yes}

but in principle it is possible to work through the information
so that other passengers would feel more at ease ^{yes}
at the management level
i.e. your choice

and from the point of view of Macrosalvation
you always have to work it out
Macro salvation of all

then it turns out that in this kind of narrow model, so to speak ,
actions
that's where your personal health is
your personal events there
that you help everyone else
often it is one specific line of events

and it's worth just looking at it
i.e. to activate oneself as if into it
all of you instantly seem to switch
to the management level
when can you help
basically to any other person

there is such a level
when a person can always help
to any other person
i.e. he has enough strength for this and

what difference does it make if he could help one
then he still has enough time there
he might still be there , second, third, tenth
there's some millionth one there

it turns out that here
the main thing is in the help itself
this is the transfer of the structure of knowledge yes

and if we fit
from the back side as if from the outside
here is to this expanding information
then we see exactly the specific
often even as if it is perceived
as a pure shell there
even as a film it is perceived
knowledge

i.e. there she has, for example there is blue color
some greenish elements are passing through there

and it turns out that in this, in its purest form
if this knowledge is recorded

then this is what remains inside a person yes
in the depths of the Soul or there in the Soul of a person

and when addressing yourself
he controls the entire information system

i.e. deep in the Soul
man is always in control
any Infinite information system

and therefore his personal information
and all the Infinite information of the World
and between these systems
the physical body of a person stands
i.e. inside Eternity
outside Eternity
this means that the physical body is also Eternal

and as soon as he begins to know
these are the internal connections
then in principle it is true
he comes to the technologies of Eternal development

and here is this expanding information
this is precisely the level of guarantee of that
that this person is calmly there Eternally developing

any systems
which interfere with this or do not correspond ^{there}
are very clearly evident
and they can always be adjusted
i.e. to convey information knowledge to them
so that they too develop Eternally, etc.

i.e. it turns out that this is the work with this area
this is actually working with dynamic systems
like outside the system ^{well as if} what level
local human level
and within the system

i.e. you combine work
in the Soul
and work with the entire Macro-region
then in principle you work very harmoniously
by the way, you also work with your physical body
but without tension

so you are at work by the way

you heal your body if there are any problems
if there are no problems
this means you regulate all events at the same time

This is where I end today's seminar.

Thank you very much for your attention
