GRIGORY GRABOVOY

The Teaching about God

Management through collective Consciousness

27.04.2005

Hello again
The topic of today's seminar
This is my Teaching about God
Management through collective Consciousness

i.e. in this case I am showing
how to solve, for example, specific problems
including through private questions
which are embedded in the collective Consciousness

and here is the structure of Macrosalvation
it is the structure of universal access
it is actually implemented in that
that when we consider
for example, the line of a private task
then this line is drawn
as a structure already containing the area of Macrosalvation

i.e. in this department when we work
through the structure of collective Consciousness
we have to monitor this very clearly
at the level of Spiritual Administration
it is the level that means
namely the structure of Macrosalvation

and in connection with this it turns out
what is in this management strategy
First of all, it is important on a spiritual basis
see for example what it looks like in general
namely the level of Macrosalvation
i.e. Salvation of all
each
in any private system

and considering that in the collective Consciousness
from the point of view of how God does it
In general, he implements it at any level of management.
same type means or what? Primary Action

those. God is one-pointed
in relation to any event

what is private
what's global there
i.e. He has the same level of primary control

and therefore it turns out that when we consider
these are the tasks in this concept
then we must clearly highlight
the structure of the human Spirit means
which defines very specific
control systems
which are expressed in the following

in physical space so to speak
The spiritual structure can highlight
structure of Macrosalvation
through the usual visualization of physical space

i.e. a person looks, for example, with physical vision
means the imposition of Spiritual vision
to this segment of space
gives the same thing

and that's how Spiritual vision
and physical vision
they coincide, so to speak
in the field of physical space
i.e., simply put, by Spirit and physical vision
a person sees the same thing
it is the structure that is being implemented here
this is exactly the kind of Macrosalvation

i.e. private task local task yes
Well, it would seem that perception is by physical vision.
this is still a private task

i.e. a person sees
some private segment of Reality
and he is from the structure of the collective Consciousness
selects a block of some particularity

but when your Spirit and the Spirit for example general
will highlight the same thing
then it turns out to be a private problem

coincides with the structure of the Infinite Action
and it turns out to be the same
precisely in physical Reality

if from this point of view
start responding to information

then you can instantly and very clearly determine
those systems that are generally considered
For example inaccessible
or not very accessible there

and practically regulate for the Salvation
the structure of each individual person

and this is exactly the person who needs help
he is absolutely clear in this system
the very first one is emerging
and when you help him you help everyone in the same way

i.e. God solves the problem of Salvation of all with one impulse
so it turns out that you are doing the same thing here
imposing the structure of a particular task
i.e. your personal task
on his for example the level of realization of this person
You can come in
into a structure that is generally quite remote
from the concept of "access"

for example, it is clear that there is nothing real for a person except God
no one has real access

and it turns out that in this system
we can do the same
i.e. to approach the structure of a completely unique one
human
only in the aid structure

i.e. we actually carry out our action
we combine
with his task
precisely with the unique task of its action
this person
in order to save him

i.e. we do not consider the private events of his life
in this sense they are not needed at all

we need to see only one root event
where to save him yes

and at the same time we can mean make management
only external systems
without affecting the person himself

for example how God controls Reality
but He doesn't touch Himself in general
i.e. He controls from Himself

and it turns out that in this control system
due to the fact that private systems are changing
Well some changes of events are happening
there are private global local
management is taking place

i.e. we are observing a change in the World
because it is the investigative system
will change

and the deeper we penetrate
into the system of knowledge
precisely from the point of view of well for example such a process
how a resurrected man appears
in physical space
when there is no collective Consciousness
Well let's say there is quite a lot of information about this

then it turns out that he somehow breaks through
this is the structure of the collective Consciousness
through my own particular case yes

i.e. the private level can become universal

why is this the structure of the universal resurrection
this structure is largely from the point of view of this technology
she is basically as if a logical structure

because it works out
What Even one structure of thought is enough
and there should already be a general resurrection

and even from the point of view of the task of prolonging life

the task is a universal resurrection

life as a structure is renewable and Infinite
therefore there can be no final action there

final action exception
at any local level
this is already a general resurrection

i.e. the logical level of a living person
leads to the fact that a general resurrection occurs

it turns out that we
through the structure of the collective management plan
we can decide to detail
and generally speaking find
some absolutely and often unique
access systems and they are quite powerful
into the management structure
exactly this other person
at the same time another person
in fact, in a collegial manner, or something opinion
he allows this system to come to him

i.e. from your point of view it is a force
due to energy intensity
i.e. you need to cure some person, for example
and you must configure the control system
and for example have access yes

but man
in the system of multiple levels of information perception
passes this signal

after all, a person essentially always consciously misses
any signal
God, for example, clearly receives any signal to Himself
because He creates it yes
He has no concept of, for example, an "external signal"

this is what makes God different
that God has no concept of an "external signal"
all signals are His
He creates them Himself

if you think about this system more deeply

then it turns out that we are dealing with
in fact with that system of Reality
for example man acted like God

i.e. so that it has time to recreate the signal
in the system well the next level of development, so to speak
he shouldn't create it in the same place
why create parallel signals yes
it's just like extra work

he must invest therefore knowledge about the signal
to the next system of his work
i.e. in fact it should output a signal
into the structure of collective Consciousness

and at the same time it must reflect the signal
quite reliable, better even exact
then next job
will be more objectified and more correct

and it turns out that when we work, for example,
through the structure of collective Consciousness
what's going on by the way
For example there in political processes in religious actions
often it is a uniform level of action
because they are connected
with the information environment of influence, so to speak Yes

and when do we start
it is precisely the influence on the collective Consciousness
draw out
as a structure of supposedly combined action
God
human
there are many people there

then here it begins to ripen
exactly that structure of Reality
which has the properties of Eternity
Well let's actually say so in the form of a material manifestation

i.e. there are, for example, some finite environments
there are temporary temporary material
and there is an environment that has the properties of Eternity

and that's when we start to look at this

this structure
then we begin to see
that the properties of this environment are different

there, for example, is a modification of material levels
to the non-material plane
is happening
Well meaning "material"
it's like between two material objects
or between the informational plane and the material plane, etc.

and here it turns out
that the structure of matter is more mobile

and when you start to see
Well as if projected physical Reality
into a more rigid matter
then near this matter there always exists

some environment well transition or something more
more flexible environment of Reality

when you already begin to recognize it
you see
the boundary system of collective Consciousness
where you absolutely clearly mean you begin to determine
that collective Consciousness exists
in some contour in a flexible movable contour

and that means this outline is exactly what it looks like
for example in this circuit
structure
the outline itself is like a border yes some
a certain capacity for the system of collective Consciousness

in this circuit the structure is modified by Reality
something, well, sort of average
between
The reality that creates
And
rigidly fixed

and if we start to consider here
event structure
then we see that events are being built
here it becomes quite simple
that's exactly it let's say that an event can be built

it becomes very flexible immediately fixed

the only task is that further on
or this event is clearly realized
or something else needs to be done

and that's when you, for example, work in management
or even just perceive yes environment
Well, just look at the surrounding space, for example.
some houses, let's say, spatial systems

there is a subtlety here though
that you don't really highlight the structure of the human body

that's how the structure gets there
human body on a physical level
The world has a complex nature
there is already a different control system there

I mean when you just look
Well even the house yes

people live inside
but they are not revealed at the physical level
in the form of for example there are people walking near the house
can you just look at the horizon

and at this moment pay attention
if you start thinking about your affairs for example Yes

then it is clear that the control lines
they seem to lie on the optical level
on some projection that you perceive

and it turns out that either the line has been laid down and it will remain that way
and you understand it
or it fits, but here we need to go into detail
maybe there is something else to add
i.e. the line is not fixed, there is some next action

maybe you just asked yourself a question
what to do next
for example, you made this line yes completed
you know this will happen
and here's what to do next
i.e. you asked yourself the question

and if for example you enter
in this prolongation as if actions
you start to analyze
why does the phase appear
Well some kind of emerging picture of the World

i.e. you put one action
and then the question arises
some other development of dynamics
as if into the depths of the nature of things yes into the external environment

it becomes immediately clear
why is the world arranged spatially

what if from the point of view of an outside observer
you are near the action
they created the action for themselves
the next question you asked
they themselves advanced the World from themselves
as if into some depth of control

because the external world is considered as depth
why is the human soul a reflection of the external world
but it is perceived as depth yes

it is the deep state

the more the Soul contains
information from the outside world
the deeper the state
or the deep position of the Soul is considered

because right here in the collective Consciousness
this system of connections is exactly what it looks like
it turns out that the deeper we move
the further we move the problems
the more profound the structures of the Soul
we should use

i.e. strategic management
this is a certain fixed status of the Soul
which constantly interacts with God, it turns out

an absolute forecast that will definitely come true
these are God's actions
so here on the logical level

that's why it can't be moved
this is action

and when for example you start
do management from this position
then your private management consists of that
what you need to consider first
all signals from the outside world

i.e. to do it at all
any elementary next action
you must understand clearly
what will happen in the outside world
only in this case you do something further
this is how the human soul is structured

i.e. in order to do this at a technological level
we need to record these signals somewhere
i.e. we need to catch the signals
in some isolated points

because to inspect
all information or the whole universe
this is actually quite a long time
even if it's milliseconds yes

but we will still have to be distracted
from management in this case

i.e. we must naturally
somewhere to perceive a signal

and these signals are what we get
these are basically projection systems
which fall
on the level means create next action
namely light ones
but they are visible only to the Soul, that's the difference
you work with the Spirit
and to see them, this is already the Soul

the difference in methodology leads to the fact that
that due to systemic perception
you see
where does Soul work
and where does the Spirit work?

and at the level of the Spirit the line is free
at the level of the Soul
it is clearly projected as a running signal
to a specific action

i.e. a certain even arises
similar to torque, that is, in optics
that the more you twist the information
the more precise the contact with God
in terms of the accuracy of your work

it turns out that
By the way, here is the structure of DNA
namely a spiral system of some kind of twist
it just reflects this level of the structure of the World

the body reacts
on the structure of your own connections
i.e. in fact, you yourself are
builders of their own body
by and large
in the structure of the implementation of its tasks

when you are working on your task
You give away a lot of information
to build your own body

and it turns out that here, in general,
this position is not fundamental
what does a person generally do

he is constantly engaged
including the construction of a physical body there
development of the structure of the Soul yes
development of Spiritual action
and this is generally the main job of a person as a rule

when he starts to perceive it
as already a systemic action
then all other tasks are already private systems

and here is the transition to private systems
through such a position in the collective Consciousness
allows you to manage events very easily
it is in the root system of the event

i.e. you can control the car
there, let's assume, the cars are electric
This means that you can control the mechanical systems of the car
when you look at the world like that

when you see that this is a consequence
your internal state

and once you catch it
this certain line
then the system turns out to be well For example there are healing treatments
which is called as the system of action yes For example
perceived

but in fact, in essence
it is simply a system of alignment of external Perception
with internal structural state

because the internal state
it is a constant construction of the structure of Reality
i.e. there should be people around you
healthy physical bodies in essence

after all, God is One
He created generally healthy physical bodies.
initially

and it turns out that He gets treatment
it's just rationing
ghost well some kind of philosophy
in general so to speak, conceptual even in many ways
in terms of a single space there is Eternal Health

i.e. in fact we are talking about
that people are gradually being introduced
into the structure of that phase in the collective Consciousness
where is Eternal Health and for example there is Eternal happiness so to speak
Well, two parameters are quite simple

Well Apparently there is one there
can be considered
naturally everyone has their own criteria
if we say that a person has Eternal Health
i.e. he is actually Eternally Living by Logic

Means but at the same time he has no criteria for happy development
in some element of his self-disclosure

then it turns out how can he then
For example precisely to perceive steadily
your own Eternal development

because as I showed here
the system is an action
precisely in one's own Perception

and that's exactly why, by the way
a system of universal resurrection is also being introduced
to show that there is no other option for development
it is even logical, i.e. it can be shown here

what does a person have to do to accomplish
development structures in the Infinite plan
we need to show that there is no system of destruction of destruction

then he has this criterion of happiness
it is revealed as an Infinite quantity

i.e. it turns out that he then lives a full life
and if this criterion exists yes

if this criterion is somehow pushed back or deformed
or it is stated that it is not needed there, for example there
or it doesn't exist for example
Well atheistic method there worldview systems

it turns out that we only see
projection system of the Soul's action
which processes
only this atheistic form of action and

and as if an imbalance arises in terms of management stability

i.e. it turns out that it is whole
namely, in fact, to a greater extent even
a complete picture of the world
the valuable system is not realized in action

and here it turns out that we should consider
the position of the World in management
that there are also atheistic points of view
there are points of view

there are some absolutely unique ones there
extraordinary in general any

and the manager who is there
according to my Teaching implements management
he must understand that any point of view
from God's point of view
Well except there is destructive yes
she has the right to an equal existence
if a person there does not cause destruction
then he has the right to reason as he wants

so there is still an investigative system
which may eventually lead there
to some destructive action

but there is another factual option
You can think a lot, but you can also count
yes, there is some possibility
but if it does not lead to destruction
so this is an acceptable level of thinking

is obtained in the control system
exists
level of interaction with different positions
often alternative there opposite
but nevertheless they are not destructive for example

Means although on the other hand
if there is a task for example there is universal salvation
the opposite is there, for example, universal destruction
there is clearly a destructive sign there
but it is forbidden

i.e. we are talking about the average statistics of a certain
there are some variations, some systems of discussion, technological, etc.
as usual norms of life

and by the way from this point of view
For example Well, well the concept of "death prohibition"

revealed in the form of words
actually means only that
something that exists, strictly speaking, without words
and it is so clear that death is forbidden
there is criminal prosecution there for example yes for murder, etc.

i.e. death is generally prohibited in society

and when we talk about the prohibition of death
we just record it all

i.e. initially the main system of governance of society
such that death is legally prohibited there
you can't kill
there death is forbidden
that doctors there provide assistance yes etc. etc.

i.e. in fact we are colliding
basically, up to one hundred percent of cases
that death is forbidden in society

and then it turns out on the basis of what then
if the whole society means set against death
Well for example, about the expanded interpretation of the principle "thou shalt not kill"
if you think about it like this

then here it turns out
what is there for example exactly in mine
actually system well political management
from the point of view of the intersection of political action

Well often integrated management it is like that
that it is possible to allow intersection systems
with other Spiritual positions of management there

and it turns out to be an extension of the principle "thou shalt not kill"
to the level of there prohibition of death
from the point of view of any system
i.e. for example there is death and it is forbidden to kill yes
such a logical postulate

here it turns out
that it is precisely the attribution of this principle to the past that is
this is the general resurrection

i.e. in principle we are working
in the usual control field which is known

and that means we work in the system of that knowledge

which are expressed by the state of society
It is forbidden to kill in society
or something like that as if to cause death yes

it turns out that based on this it means
Well words placed in this way
for example there is the Law on the Prohibition of Death
it's just a fixation
the existing position of the World

and why should she be now
more clearly manifested in the current time
because there are quite a lot of positions now
who need a team or something principle of operation
for example, many robotic systems of a technical nature

so I naturally exclude people right away
from a system of such external control
people cannot be controlled
in essence it's all the same as I said
by and large only man has
access to investigative systems yes
what he reproduced, for example , what he created himself
in the system of the general Reality

Well for example take animals
they can't always have an effect
for example , on a car that a person is driving

if we start to reason by analogy
and how well for example build
the system of the next Reality
so that there is equal access
from all control systems
then we get that all the same in evolutionary development
each species level or each evolutionary level
still has its own niche for development

and only God has direct access to every system

and it turns out that he is still a person by and large
still not available

in this case i'm talking about management
technological cycles systems
which were created by man

if we include a structure such as "death prohibition"
and this system gets into the development of machines

how exactly the legislative system
it is forbidden to kill for example
Cars are also prohibited

This means that special software packages are being introduced
cars stop killing yes
have functions that are not dangerous to humans
from the point of view of human life there

and then it turns out
we through the system of collective Consciousness
we bring out the next level

that as soon as we introduce into the structure
machine level
i.e. we took and declared that which exists
prohibition of death
they called it with words

then we created a device there
which does not kill under any circumstances
Well they took the microboards and installed them there
physical body detection sensors
human body tissues
and that's all

and the car can't run over it
it bypasses the human body in any case
that's basically it
with modern means of technological development
it's already possible

Means and it turns out that as soon as such a machine is created
first yes
the structure of the death ban begins to influence
on the system of collective Consciousness
through the investigative level

i.e. man created a machine
the machine put the death ban into effect
as if for physical Reality
and acting, for example, on the structure of collective Consciousness
through the collective Consciousness in this way

This, by the way, is also the principle of human healing
because it is based on that
what if a machine can't harm a person

then the person is like that as a consequence yes such
there may be a few, well, unnoticeable consequences

but a person begins to care more about his health

for example, in the car manual it is written
under no circumstances destroy a person

a man who did not think about health
starts to think
so at least
for some reason it was put into the car yes
this means he becomes more frugal there, etc.

i.e. connections arise which
Well as if they are starting to create new spaces
information spaces
in the development of man, namely the Eternal Living, in fact

and with Eternal development
creation of special spatial themes
bred, actually cultivated by people, so to speak
these will be special technologies
which will be exactly what attracts
a fairly strong human resource

i.e. create tasks
here in the system of collective Consciousness
there is, in principle, one of the areas
which, let 's say, functionally should create tasks

if we consider the collective Consciousness
as a system of regions with specific functions
then such a function certainly exists
the tasks are somewhere
civilizations

and it turns out that here we will be able to see
what exactly do we say is the principle of human happiness
Well, yes, the attainability of some goal
here he sets a goal, then works on it and achieves it

this is still a creation, well let's put it this way
comparable to the Action of God
tasks

and precisely best of all precisely determined by God

but at least comparable
at the level of correctness of action

then the person immediately comes closer
let's say on topic Yes management

and then here is the principle of his inner happiness
this is what god does
i.e. happiness determined by God

when does such development in management begin
then it turns out that you have
extended i.e. Infinite tasks
which are now being folded into a private system

i.e. if you see at least one task
i.e. God created one man
He knew that the World would be Infinite
and the man himself too

if he sees at least one task
so the whole Infinite is like a train , yes
which comes from its Infinite development
It is already clearly visible to God

and a person sees only the projective part
those. approximate space

and when do you start
in the structure of projective space
look for access points
to the development of their own tasks
in your own happiness or in your own health

it is actually a health restoration system
it is a very simple technological system

By the way, many of them are children
have a rapid self-regulation system
because they see this system openly and simply

and for example, if you think about the resource
why does a person grow
not from the point of view of biological principle
and from the point of view of fabric management, yes
it turns out that the child has very strong control over the fabric
he has a very strong resource

it constantly increases the amount of tissue
increases the system of interactions at the intertissue level
he gets the matter from somewhere

i.e. all people eat but not all of them grow constantly
if we
moreover, it seems clear that up to some growth

basically people grow up and that's it

and if we abstract from biological
principles of development of civilization
it turns out that the information principle
it is quite significant
i.e. children constantly find additional resources

and if we assume an adult
resource for example implements
in the system well some actions yes
and it is considered that, for example, when he has already grown up there
Human
he begins to implement some social actions

and then there is such a position
that in this case he is already further
Well in fact, it kind of puts in the main control
in some current tasks

then if you look at it more closely
then it really is the main control loop, as it were
which stretches as a strategic
namely, prospective management for a specific person
gradually a person begins to invest more and more
and into external management, precisely into an external resource

and that's how it works
that when he starts investing in an external resource
then if for example you do it like this
for example, now there is direct joint management
view visualize this external resource
then in principle it is clear that it is an external resource
quite an objective thing

even in management when you now look ahead
to this phase in the collective Consciousness
then this phase has a fairly strong

Well as if by a convex action
in terms of well or what? tasks of those people who are in front of you
there are tasks that exist
somewhere in a distant Reality

but this is a specific layer
it is the layer that has certain
in fact, management functions

and it turns out that based on this
we can see

that the main control is transferred to the person
from body control to Reality control

i.e. it is as if he is increasingly the internal resources of the Soul
forwards to the remote control structure

strategic management, yes
where there are more structures
he is transferring control
to a more contact control system
with Reality
with the phase of collective Consciousness
which means external Reality

although children do it naturally too
but they just do it faster because
that at the moment of growth they, for example,
let's say they have a faster action mechanism
on Macro Management

but there is still more here
that most children have
there are parents who provide for them
Well like this intermediate system
that the child can develop yes
receive the development system in general standard values
there etc.

and it turns out that it means here there is a possibility
for more spacious more as free management
faster too

and in an adult who is, for example,
Well as if physiologically already outgrowing
into the management of that faction of the collective Consciousness

which is distant but more like closer to him

then here so that here
Well, generally speaking, it works universally, yes
how does god work
God acts universally for all people.
i.e. He has the same methodological principle
what for children what for adults
He gives knowledge equally to everyone.
i.e. for Him, in principle, by and large, there is no difference either

It gives the same knowledge at the same level.
Well let's put it this way
per unit of time from God

a child receives as much knowledge as an adult

and it turns out that if we consider this process
from the point of view of integration
how to get it out let's put it this way
some collective single impulse of control

which is generally knowable
at the same speed
by all systems of Reality not only by the way by people

then it turns out that we should
actually come
to the very first impulse of the creation of Reality
and precisely in the phase of collective Consciousness

how did god create the first element

It is logically clear He created man
connected human thinking
with Your Own Thinking
received the first impulse of the collective phase of Thinking

but God is the Creator of man too
and He also recreated himself
and He took and united
i.e. this is already a repeated action yes

this means that a primary impulse is obtained
what is visible to a person yes
well, some elements of God's self-recreation

at least he can study
what a person can perceive

and when we see further
what is the first element
actually polysyllabic
contains
and the system of self-recreation of God
and the system of creation of man essentially by God

and when you start to see
that here the systems of interaction are precisely such
that one is the most simple element in general
primary level of collective Consciousness
contains a very complex system
then it is immediately clear why a person has a future

if you think about the control system
why did God create such a world
what a person perceives for example the future yes

From a logical point of view, this is understandable
that there are some processes developing there
and if we are from ordinary logic
Let's just move on to an analysis of the universe

after all, God could have created man like this
that he could have the same type
for example cyclic processes yes
then the future is done

man creates machine
they have a cyclical process
the future is quite clearly defined
each if it is a certain machine

but considering that God created in the Image and Likeness
He could not allow the possibility of cyclicity there .
uniform cyclicity

and it works only in this case
He creates an expanding world.

so that God would have an external world
He had to create man like this

and it turns out that based on this we
Well as if in a mechanical-optical principle
it is clear that the future certainly exists
because in one impulse there is already a complex system
and where to put this system?

from God's point of view
For example , we can’t move it into the past
there is no past up to the level of primary creation

then you can enter this system
do only in the future
as an array of information

but i'm actually saying
not at the level of some mathematics or some sets
I'm just saying where to physically put this optics, yes

it is elementary clear that if there is any information
it must be contained somewhere, simply mechanically

as a certain volume, a certain mass, yes

so it turns out that God could have created initially
only the primary design of the future
which means He had to distribute it somewhere
i.e. into a known space

to the space of the future
He had to create some space.
that's it
the first phase is the neutral phase in the collective Consciousness
where everything is created

collective consciousness
has the ability to create a primary quantity
Well as if some kind of matrix that is completely neutral
but anything can actually grow out of it

and that's when we start
it is this structure in the collective Consciousness
explore yes for example, enter this system

then you can see that, for example human physical body
from the point of view of collective Consciousness
it is a very manageable element

it is enough to perceive at least logically means
one healthy person
all people can be healthy
if they know the channels of interaction
this kind of mass of collective Consciousness
with information of a healthy person

and by the way, here is a pretty good principle of healing
find this root system
which I showed in the collective Consciousness
tune in and the person becomes healthier

from the point of view of Eternal development
God Eternal
there is already enough basis for Eternal development

but the one who is engaged in this is Eternal development
this is generally quite a strong incentive
in the mood for which
a person can really become Eternal

and in principle
Well It is the Eternal that is real

i.e. event systems are formed accordingly yes
he doesn't jump from any slopes or bridges, etc.
at least one more time
and if he jumps, then he jumps on some kind of rope
Well I mean extreme sport

but as long as the person is different
I didn't learn how to teleport there
or somehow otherwise own the body
so the external environment is safe for him, I mean

the majority of people should still be there
within this management group of this management phase

because the collective Consciousness
based on accessibility
to any system

it means there are properties that are embedded
into the system well for example there are human bodies if
well, exactly the one who doesn't do this
if he doesn't know how to do it
then somewhere this property can manifest itself yes

i.e. if at least one person has not learned
technologies of the Eternal there of Infinite development
under any combination of events, so to speak Yes
the physical plane is meant primarily
that he controls the body like that
that for him physical Reality is no longer important
he can build there for example instantly body yes
in the right phase

it turns out that the main system is completely different
i.e. all people are forced to focus on it
that's why knowledge about Eternal development
they must be truly universal

i.e. in the Laws of collective Consciousness
according to this primary mass of control
it's absolutely clear

and by the way, God created many people
i.e. created the next and so on person precisely for that
so that the Laws of development in the collective Consciousness
were shown
this is one of the Laws

I talk about him often
that everyone should have for example technologies of Eternal life, etc.

and it turns out that here, by and large,
because the primary Creator is God who is Eternal
has Infinite Eternal Development
it means that the destruction system is not rooted there
of this process
this means the environment will restore itself anyway

and it turns out that in any case
that's exactly where the general resurrection is , for example
not only there by the way there are people
and in general, a general recovery
creative development systems
will happen

and it turns out that this is the level
if you study it in more detail
then you can see how these are exactly fragments of the future

they concern this one, well, let's say, you can call it that
some kind of protomass yes

i.e. the mass that exists before Reality
or maybe you can introduce such a term there
as "just a mass"
i.e. this "easy" is the future
if for example to determine from the side for example there is a proscope there yes
control of the future

it turns out that here the structure of the future is growing in
in these systems this is your personal task

By the way, if you think about it, where do tasks sometimes come from?
well, sort of Well, a person often can't differentiate
suddenly some situation or task arose

and to find its root
because a person still has to identify
root of the problem
he still has to understand
where does he get what from?

then it is possible in the study of this environment
to see that this is not very often even his task is private

and here is the control
through the phase of collective Consciousness
their personal tasks

allows you to understand exactly
why does an action occur in a certain situation
which well or it is considered as if it was not provided for
not needed for example by a person at this time

Means Well, maybe it's not bad, but it's addictive.
or it's not clear where it came from, so to speak
let's call it that

then when studying this process
this term cannot arise

i.e. it is absolutely clear
what is the study of outgrowing
phases of the future
into the structure of the collective Consciousness of the primary level, so to speak
Well let's call it the "proto level" primary

up to the level as if so let's say a cut of control

i.e. we know that there is a manifested level somewhere
but up to this level
it exists as an optical control slice
that exists before this

here is the germination of the future process
at this level in the optics that is considered
to the level of primary action determination
this is the reason for many events

and here lies the past
i.e. the past turns out
if we want to find it mechanically and control it
we must look for it in the intersection structure
future
with the bearer of the future itself

and it turns out that why exactly in these categories
Well , in this case, I'm showing the controls
Well, there is an egg , but the egg is lying somewhere

and it turns out that based on this
Well, an egg, for example, is the future , yes
or does the list of events mean

and it turns out that if we define
some point means which characterizes
The perception of this "egg" or there in quotes yes
or just the system of the future

then there in some position
we are in the structure of this information
we begin to grasp the past
as an initial level of development

Let's take for example information on the shape of an egg and its color
let it be, for example, some non-white color
Well For example there is yellowish-brown

and we will try to project
if a person looks
where is his reflection brighter
at the narrowing of the egg or where the wider part is

in narrowing primary level
at the primary level it is brighter
if in optical media

and if you concentrate for a long time
brighter next part
i.e. the future grows from the initial root yes
there is a root system
some kind of drop-shaped system

and when you start to look at the drop
how is it along the line of force
it is pulled out precisely by gravity

that's understandable in any environment
that there is a primary root
even in the environment it would seem like a drop is flying there
there is still a root system
primary

i.e. in a mechanical system
can be distinguished
phase of the past phase of the future

in a drop we can isolate for analysis
structure
which is more in line with the past
root system
and in space it is the higher part

the lower one falls deep into the ground for example
in the structure of the action of gravity
and here it turns out
that it is more the future as if becoming than the past

i.e. well such intermediate concepts
what is "more future" "more past" concept

i.e. we enter a system of more neutral definition
by the way this is a very powerful category for treating people

if in relation to the disease
define the term "unfixed system"
and is this one bigger or that one bigger
then working in the interval of variation of this information
even complex chronic conditions can be cured

some kind of serious illness
only because we
we do not allow the structure of fixation to stop
it is precisely this , well, sort of conceptual environment

we walk near the administration
Here is an example of control diagnostics
we need to diagnose and cure immediately

and it turns out that we work more with this system
in this faction of the collective Consciousness
i.e. we don't let you concentrate
nor the structure of the future
nor the structure of the past
we are constantly improving the situation
and once it is improved
we either say nothing
giving time if the person doesn't know yes

if he carries a paper with a diagnosis
then it will have to be restructured
if there is any problem there

i.e. then the work is already underway
It is best also without fixing this diagnosis

Means and that's why it turns out
that this is this intermediate control system
which looks like a system
Means Well lack of detail of the past and future
in human action
in the Spiritual impulse of man
this is again the primary level of collective Consciousness

i.e. the person works
through the property of collective Consciousness
primary properties

where is the structure of the future past
to be very well expressed

and therefore on the Spiritual level
a person can build very clearly
basically any design
it works actually on the level
at the level of primary structures it turns out to be Mira

and when do you start working from here?
it is clear that through the phase of collective Consciousness
precisely collective
where again there is not only a single opinion yes
and the opinion of all people
or at least it means there two people
which means naturally there is God's opinion there

you can always build any structure
i.e. to always achieve absolutely precise control

that's why in this lecture it is
where the seminar part is
in mandatory control, namely in dynamics, yes
in the dynamic concept of collective Consciousness

you need to see very clearly what can be achieved
very precise control of any task
absolutely any

i.e. you can set any task
for example, there is the task of resurrection
resurrect make resurrection yes
the task of meeting with the resurrected
then this problem is definitely solved

i.e. in this problem it is possible to solve exactly
any control design
Well naturally there to heal there
to achieve something sooner or later
you can even do it at the right time if
if you want yes

but for this then it will be necessary
to move the structure of the World more capaciously , as it were
if you set the time
Well it is definitely possible to achieve

and so when you start working
through the system of collective Consciousness

It is necessary to keep in mind that the force effect of control
may be significantly higher
than control through private structures
or through universal constructions

This is where I end today's seminar.

Thank you very much for your attention
