

GRIGORY GRABOVOY
The Teaching about God
Managing the Past
13.05.2005

The topic of my seminar
This is my Teaching about God
Managing the Past

in this topic i show
how using information from the past
to exercise control over current future events
and also, generally speaking, to specifically carry out management
past events

for example, in some diseases
often information management technology
taking into account the development prospects
for example, predictive characteristics
This is the management of information from the past

so it turns out that the management of the past
this is management as such
from the point of view of well- alignment
some aspects of past development

then direct control
i.e. direct control of information from the past
where there is an opportunity to consider
well, the same specificity of action or Reality

when God for example makes management
from the point of view of the connection between the past and the future
then often the aspect of the past for him is information
which is kind of projected
as a structure, including the distant future

that's if from God's point of view
that the distant future is in the projective part yes
what action for example
well, some deepened distant past
often it's the same line
Well as if geometric in distance

Well, if we abstract from the concept of "time"

then we get the concept of "distance"

and here if we consider how a person perceives
then by analogy with how God perceives
here it turns out that we see the concept of "distance"
as a structure, in general, of expansion into the structure of Perception

i.e. to such an extent that man has expanded his Perception
and traced this dynamic
so there will be a distance

i.e. the distance measurement occurs
not for example in centimeters and not in time
and the freezing seems to be happening
just by the movement of a certain section of light yes

and that's how much longer the light will travel
as if the distance were further
visualization

if we don't consider time
then it turns out
that to determine where the past is and where the future is
we have to work as if
from the point of view of the principles of synchronicity

i.e. in the future
any information can be changed for the better

then it turns out that by analogy we can
change the past for the better
the only question is why should we change the past , for example, yes

then it turns out that here technologically
we must be very clear
in real time all the time

here when working with this technology
It is very important to realize
this is the intermediate link center
which characterizes the current time

and here is the current time
here is practically the determining coordinate
i.e. time actually begins to sort of twist and roll up
into the space system

here the transition is very clear
at a certain level
information is perceived as time information

a little deeper there, and it's visible linearly
it is clear what this time means
Well like in a pure form or something
in the form of a pure substance
it's not even dynamic

and if we go to the root of this information
closer to a person
and as if into the distance
then you can see some kind of
development of information
then it turns out that this is space

i.e. the space is allocated
as a pure substance in general
as a kind of grain of information

and it turns out that here in this system to work
after all, the past is a temporary system
for example for a manager for a perceiver

and when we mean integrated space
then the problem of space growth arises again

and here are the characteristics of the growth of space
you can understand what we are talking about, yes
either about the past or about the future or about the current time

and considering that space
is always in the current time
this is the only way we can determine
management structure for example past

then it turns out
what exactly is in the technologies of past management
we can say very clearly
where is the current coordinate

here from the point of view of future processes
any other process it is in principle
Well there in a second it is some coordinate of the future

and it's constantly changing

on the one hand the event is growing
on the other hand, we seem to be getting closer
to some immediately related events

i.e. future tense
this is still a fairly dynamic structure

and we can record the past
there's an interval there an hour ago
and take this period and count
yes, the past is always fixed

it turns out that we are working with the past
we have similar characteristics
even the Infinite Past is a fixed value
here in a certain mass of information
this is a specific interval

for example we think
there is an Infinite Past
from minus Infinity
until some time, for example, the current one
this is already a fixed value

and therefore it is constantly in contact
with the current time
here we have the current time as an indicator element

therefore, based on this
if for example we are building a human body
Well there we realize our own body yes
in information

just like God does
He works outside of time.
it means that He succeeds in realizing the body
this is an aspect of dynamics
this is an interaction with some information

and it turns out that here
implementing for example with current time information
we translate the body to the current coordinate

i.e. it turns out that we are from the point of view of Consciousness
all the time we move the body in the current coordinate

i.e. we maintain it through management
all the time as if in the current tense

and based on this

for example, to cure some disease

it is necessary if there is a disease yes

if there is no disease

and in general it is necessary to do management

that initially the person does not have the disease

and if during management

a person doesn't have time to do such management there

that the disease disappears

if somewhere informative it appears

only then is it a disease

even when the initial diagnosis is made

there the person is immediately given control

that by the time the conversation began there

the disease should disappear as if

although there are, for example, some diagnostic sheets

this is where it comes in

the task of actually managing past events

i.e. the sheet should be well kind of empty yes

the diagnosis must not exist at the current time

and it turns out that well, this is not necessarily just a diagnosis

it could be some negative event there

which needs to be corrected by the time of action there

i.e. in this technology of control through the past time

It's important to see what we can do with this technology

act in almost the same way

here someone turns to you for example there with the purpose there

that you should provide some assistance

or did you notice it yourself?

that needs to be managed somewhere

then it is possible regardless of any coordinates of the past

make control and get for example the current task

Well for example, if it is about that

the nuclear power plant there could explode

because there are some problems in the documentation
we will have to correct this past
so that it doesn't explode
i.e. we have no choice here
we have to work with documentation

i.e. change the technological cycle
and this means getting involved in the structure of all past events
this station for example Yes

and it turns out that, well, by analogy, we are talking about that
that this also applies in general to people, events, etc.

i.e. management of the past
often this is still a necessary value
which says that we need to fix it there
structure already in the past event

For example the diagnosis is wrong there, yes
the easiest option
if there Well, the person doesn't have any problematic diagnosis there

second option for nuclear power plants
that something at the level of past events was not right
and the information is presented incorrectly
not everything is so problematic and there is no tragedy, etc.

i.e. by the time you receive it
primary information
then you do the management
you mean how do you manage that too?
that in the future it turns out like this
that it was some kind of inconsistency as if

although there may be very strict protocols
there are fixed ones

Well, there were specific cases in the aviation environment
one of my management practices
what do you mean had to do the management
when the information came about that
that a certain fee is quite responsible
as if it were out of order there would be a fire

I had to make a control that this is not so for example Yes

that there was a disruption in coordination
Well, it is precisely the coordinate system
in the movement of an aircraft it is

and it turns out that here is an ordinary passenger plane
so it turns out that here, despite the fact
that there is a recorder that writes
presence of board or absence for example
how so how would the work ability of this board be

I had to actually restore this board
and then the recorder showed no payment
i.e. the board burned out
and then when the plane had already landed
the board turned out to be intact

i.e. it turns out
that although there are harsh means
objectification of events yes for example past events

still in some cases it is necessary
to save people
correct the structure
even if it is firmly fixed there

and it turns out that based on this
We must develop a mechanism, first of all, for adaptation
to the system of collective Consciousness of these actions

i.e. for the salvation of man
for example the board should be
so it doesn't matter whether the recorder writes or not
it must exist

how can I then explain the fact that the board burned out
and when they inspected the place
there was actually a visible place from the fire

but according to the recorder the fee
in such a fire it should have burned
according to physical laws
the recorder showed that it burned
at a certain time in a certain period of time

and when the plane arrived, it was whole, for example Yes

i.e. well, some kind of non-logical event
but there is no logic and no justification

i.e. but theoretically it can be assumed
that someone could have just taken and screwed this board on
but it is only attached in factory conditions
you can't do that here either

and it turns out that
well, well, event basically something like this
that in technical systems everything is very simple
Well, the plane arrived, that's good.
They changed the block and installed a new one
and this story seemed to remain only as a history of management yes

so in case of treatment of the disease it is even easier
because the human body is capable
there quickly recover
i.e. there are no problems, the diagnosis did not exist, for example

in case of some well there are difficult situations there
when a person comes out of a situation with benefit there
well there for others for yourself
and the situation is normalized

as a rule, the details are related to that
that there are some illogical systems
Well, this is generally of little interest to anyone

i.e. in creative systems
management of the past of some aspect
as a rule they can say this
that it was a discrepancy
it's some kind of mismatch of events and
or not justify it at all
Well, some action happened and that's it

i.e. therefore in adaptation in the collective Consciousness
here, actually, it is often not necessary
Well how to integrate into this system very rigidly
and consider what is embedded in the collective Consciousness
from the point of view of logic or determinism of events

but it is enough to save a person there or save a system
and that's all
and how it will be explained later is another option

therefore to a greater extent to a greater extent
past management
concerns the structure of future events

here is to track a non-reagent function , so to speak
collective consciousness
it follows in this technology to a greater extent

although sometimes it makes sense to somehow manage it there
so that the logic of events is more balanced
i.e. add a random value option there, etc.

and so when we look at future events
this is where the influence of this management is already coming from
here you can clearly see that if you are considering
past line binding
for example to you
to your body
there to your events

and start working by following
reaction ahead

and such technology is quite linear
it's kind of very simple
that there is no need to choose any options

the line of the past is one line
it is completely clearly optically manifested
the line of the future is again this in this case
has a very peculiar connection

you come to the structure of the future
from the current time
and from the past tense

and here is the main route
when you pull the line of control from the past
i.e. that there is a variation of the past
you change that reference coordinate point

i.e. your element of Consciousness
which must change the structure of the past
it means it 's tightly closed
in the system of control over future events

then it turns out changing the coordinate of the past
you clearly understand how this affects the future

and considering that it means you have to move
very often in large arrays
because the information of the past
it is more concentrated information
and the properties of the information are transferred to the future structure

Well, well as if the capture of information the glow occurs
if you touched the element of Consciousness
to the structure of the past
and then you move into the structure of the future
dynamic information of the future
becomes as if loaded, compacted, etc.

and then it turns out that here we need to clearly understand
what are you transferring into the future
a lot of current state
it seems to be going well , this is how it looks
how to capture such a light-photonic environment
some kind of emission of electrons

here you can see it right away, you can even see it
this kind of trail like a comet has, that happens
it means light

i.e. it turns out that when you
Well, learn to distribute this information.
main task
so that these photonic elements, well, some kind of train, yes
so that each of them has coordinates

here if you achieve
and this must be achieved using this technique
it's not difficult
you just need to make the controls
there you will receive the information that you need, for example
track where each of the photons is
just about everything in this area
I'm just showing it with my hand
it looks like there is a broken triangle there

why torn
because the dynamic control line
it's in such a linear system
from the past to the future coordinate

this is not a manifest line
it often does not have clear coordinates

but it is precisely the structure of the absence of direct connections
there are no control points
you see closer to the person

for example, from the point of view of logic
Human
all Infinite space perceives
as a monolithic space
or at least it doesn't really concern him
and it is perceived as a kind of general plan

the closer you get, the more discrete the World becomes
objects appear, etc.

and it turns out that the analogy here is something like this
that although the gap is in the remote control system
and not in that coordinate system
which comes from Infinity
this is it on a physical and logical level

and manifests itself in optics
On the contrary, it is in action from a person
because a person is free, he can make any decision
even if it pulls information from the past
and somehow varies the future
he has the right to make any decision here

then all the information will change like this

it turns out that in this system there is a lot
Well, it could be some kind of loading factor
is the need to control many systems

i.e. discrete line of freedom of decision
which a person always has
i.e. under any control
a person can always instantly bring out the norm
due to third technologies

and it turns out that when you lead
this line of control well For example there in the treatment of diseases
often this technology takes time
which, for example, is unacceptable there during rapid treatment

this is usually a shift of a very large array of events
and when shifted
after all, a disease is some kind of information
which interacts with the entire surrounding world
and even shifting a large array is not always effective

i.e. therefore this technology is more defined for that
to change some kind of strategic often
systems of the future in the control version
and well, like on some kind of expander there
you can do some training
from the point of view of working in a rigid coordinate system

where the lines are very clearly visible
i.e. you can learn very quickly there
recognize the optics of this phenomenon
because it hardly changes
and these lines are always in the same place

depending on the time of the past
however, the system itself
she is always almost in the same place
the whole system of connections
and works

and it turns out that working with this system
you can receive
Well as if a purer canonical form of action there
so that the document has the required form there yes
so that the event is correlated with the tasks of those
which you decided in the past

i.e., a somewhat dynamic line of control
which is required so that, let's say, you could
For example how to fix some actions
which you need to correct in the past yes

and for this there is no need to rush to correct them
Well Well, if you need them for business, for example
and this does not mean that if some problematic event
arose
that event, for example, requires an immediate reaction

i.e. if it doesn't really concern you at the current time
you can always have an event
from the point of view of this technology

leave it somewhere there means under control, for example
you have time
take enter into the structure of the past
you start to correct

so it turns out that in this case
Well For example Well, in this row or something in this case
you can correct events
as much as you want
i.e. it's clear here
that there is always control over past events

and in principle from this point of view
the main thing is not to allow a person
some extremely negative events
and all these are like peripheral events
always fall under the mandatory control structure

i.e. you can always correct the structure of events
which happened

Well, in principle, you can always fix it
any event system
but it is better not to allow this first property

but there are peripheral events
which anyway one way or another
they manifest in humans
or he doesn't pay attention
or he doesn't think it's a problem for him

and when does it start
well, there is some problematic property of this event
then often it still has to be corrected
namely the root, i.e. the initial level of events

what did it all come from

then it turns out that a person is forced to work
still with information from the past
it corrects the primary impulse including
although there may already be consequences and

and what about us as managers?
we need to correct it not just there at the social level
we also need to be able to correct the structure
or there is no need for it to be in social or any other level

and in the structure of real events

i.e. the manager must actually correct
information on the merits
he must correct her in the past

i.e., for example, consider the structure of the past and do so
Well for example one of the properties can be made
that the event, for example, did not happen in the past
what then now
so how does it affect etc.

i.e. if by the way here is one as if
one of the control systems
make the event not happen
then in principle the management becomes easier

i.e. it turns out that you can see
that as if some kind of weight
Well or what? Well as if functions controlling the current events
they become less, let's say, stable
i.e. the negative spectrum reduces events

and to do that, well, that 's management
that the event did not happen
then it turns out that we can do it in different ways
including any control systems to apply there

i.e. it is possible, for example Well how to try
to take control in this way
what does normal mean in control system
consider in general the connections of this initial event
when it hadn't happened yet

consider peripheral communication systems
consider it as a whole as usual
the situation is being analyzed
and then exclude the event, for example

and by the way you will see that then there are certain
Well, that means they are quite long-term systems well, the future yes
which are beginning to be more stable

i.e. the ability to control past events
makes the future more sustainable
Well, it looks more like a logical connection

because for example to say that the events were
Well as if I may say so
that they were, for example, somehow negative
and they influenced something

but the current situation is like this
that there still exists some position there
and it must be dealt with from the point of view of future events

but from the point of view
it is precisely the mechanical level of control there
i.e. a manager does not necessarily have to do anything socially
there to call etc. somewhere
i.e. to undertake some physical actions

and often the situation can be completely corrected
i.e. remove information, enter new information , etc.
i.e. just work on the controls
clear the structure of past events
i.e. and align the future ones accordingly

by the way in this technology
Well for example, there is such a principle
what is important here is to see the details very clearly
how do you manage

technology is developing very quickly
and can bring a lot of benefits
if a person sees a clear constant connection
management in the past
with what's happening in the environment
or current or future tense

and here is the main structure of this method
need to manage the past more
in the Spiritual plane
where is the information of the physical body
Consciousness

but it is always better to control with the Soul

i.e. although somewhat unusual
physical body information
more well in the current time it manifests itself

but in the management of the past

so that the synchronization was controlled as if higher
after all, in the past the physical body of a person was also

this is how, for example, God controls the Infinite Past there
i.e. it spreads information of the physical body
for all processes temporary

i.e. information of the physical body
for the past
it's like information you entered

you need a physical body
element of Consciousness
which corresponds to the entire physical body
introduce into the structure of the past
then the management of the past will be more stable

and here is one of the Laws of correct management
if you enter information about your physical body
into the structure of past events
First of all, you need to see clearly at the same distance
physical body in the future

and secondly, here is the control element
as such a control element
is that the information of the physical body of the Soul
in general, at a certain level there is knowledge
where do you see
the depth of the Soul in the past for example Yes
then the Spirit
it's all an integrated value

i.e. well for example, if we consider such a process
like this is God's information
perceived by people for example
in the Action of God

Well For example there can be there perceived
as light information suppose
it means that information is simply knowledge, etc.

and therefore as information of the physical body
it's just that here he is perceived as a person

it turns out that to a greater extent
human physical vision

i.e. information as if correspondence

Well as if from the point of view of the relevant
or what about the organs of perception

and here when we are in the structure of the past
we're going out
there is a different angle of view, and naturally the work

because we are here
how do we introduce the concept of "time" yes For example
and we are in a temporary system

and the past is like a spectrum of events
that's why there is some modification there or something
must be in the elements of Perception
the same as if we were looking at it
somewhere information let's say
in the distant future at least

i.e. where the modification can be different
in the distant future, for example, different systems
and modification is meant
i.e., as if the adaptation of the function of Perception of Consciousness

Well, if you look at how you position the perspective of Consciousness
in optics
and so the "collection" of information will continue as if Perception
this is how the management will be carried out

and here you can see it very clearly
that Consciousness can be located here
multi-angle
and always calmly change the structure

i.e. practically come to that
which is essentially firstly
there can't be any unexpected situations
for a person
if this is to know about the system of connections

i.e. the information can be seen very clearly
where are the predicted characteristics
get there
on the human system of Perception

working with this information
It is always clear that a person
in fact, the information of the future always has
at some level of Perception

he just needs it
either react to it or not react yes

if he thinks it's difficult
or there for some reason he needs to save this information

as a rule, the Soul stores information for some reason
to find out if it is there
there is not really a radical problem there
for a person there are no special problems there either

then as a rule this is the task of the Soul
to manifest something to reveal something yes
because the World is a system of manifestations

and it turns out that even when doing management
for optimization
you can well maybe not quite the status of the event
but with some diminished status of the event
they still collide
for something you need to know
some criterion of action

perhaps these are more distant events
manifested in a lesser form
i.e. if there are none for example now take into account
then in the future there will not be for example there
some more problematic event

as a rule, this is where you need to look closely
why some signs of the event
appear

if they appear
then the very action of regulating
this is already a good action, you still minimize it

and by the way if you noticed
some kind of negative status of a possible event
then as a rule the event does not occur
exactly in that negative sense

it can be of about or more general order
but at least you are already protected

and it turns out
that knowledge is protection

if we move into the structure of this process logic
then it turns out that there is then current time
this is concentrated knowledge
which allow us to navigate
here in the World system ^{yes}
informative ^{as if} the World

and it turns out that the maximum projection of this knowledge
is in the current time

i.e. the current time is determined
as a coordinate of the maximum level of knowledge
appropriate to the given moment

Well, let's abstract from the concepts of space and time
and ^{for example} let's ask ourselves the question
so God wanted to give man a system of orientation
in this world
what he had to do

He had to give some islands there.
who would lead Him correctly
^{well,} that is, some kind of concentration of information
where there is the most information
to respond to the current environment or control the environment

this is the current time
those. like how God's task ^{yes}

and it turns out that based on this
we can from the current time
output any control structure
actually ^{well like} the most ^{or something}
direct action systems

i.e. the fastest control systems
which are actually the most concentrated
in this task, in this method

because then from this point of view

can then shift any array of the past
into the structure of future events management

and then it turns out that we are already there
in constant control of future events
then, actually, to us

then there is no need to turn to the past

the task is to manage some kind of array
it is for, well, actually, to get
after all, the events of the future in any case

just deal with the past
because there is, for example, extra extra time there
Well, this is the wish of the people
but it doesn't really have any effect

apparently, as such, we need to consider it there and do something
from a logical point of view
because everything still goes through the structure of Macrosalvation
all the same, everything is put on the structure of the necessity of action
specifically for Macrosalvation

i.e. if you just set the task
there fix there some poster in the past yes
Well, such a conditional task

then, firstly, generally speaking, apparently with a large resource
if if especially connect with Macrosalvation
then of course it is possible to perform this action
but how if not to connect
then there may not be any special action in general
not to happen

what is there to fix the poster well there's some kind of inscription there

so we need to control what will happen in the future
i.e. in the current time
the inscription will be modified yes For example

but if you fix in the current time
this poster
but what does it give for specific people?

if it's a plane there it's people's lives here again yes
then it is clear that this can be changed

and here's a poster
how to connect it with the Macrosave system

and here, for example, if you still find
some resource and you connect
then in principle it is possible to influence
as if in real time at the current value

but this coordinate is the most effective

for such a practice
such as there is treatment for the disease

because it works out
that here such a principle is implemented
for the human body
what is the human body
for example, you can instantly be healthy there

and therefore, for example, such
this type of real time control
it doesn't go beyond there
Well as if logic in the collective Consciousness

but here is a change of some other factor
this is already a longer moment

and it turns out that it is precisely in the collective Consciousness
there are two factors of control through the structure of the past
for a person for his health yes
so that he could live there forever happily and be healthy
you can do instant control
through any arrays of the past
and this will be acceptable

i.e. in the collective Consciousness this niche exists
and it doesn't need to be specially worked out

and what about any other actions
on some mechanical things
logically which are rigidly fixed

here you already need to enter
into a special management environment
which well can be called like that
that the technology of knowledge is like the Soul of man
this is exactly the technology that God gave

i.e. self-knowledge of a person
but the knowledge of one's own Soul
human

it is important to highlight this system here
and then control of the past
as soon as it is clear to the Soul of one Soul, yes for example
exactly well let's say a person controls
and he understood with his Soul

and at such a level, so to speak

well let's say that part of the Soul that is kind of characteristic
it means in the general action of all people

i.e. the Soul has a level
Well let's say it's logically understandable for a person
i.e. close to the human body

and is there a more light-optical level
where a person perceives as Macro-action of the Soul

and that's when he understands this process
With soul
which means further translation
this is on the level of the Spirit
logic there
then it is enough to understand with the Soul
and you are making control of the past
because in the Soul it is actually
just like God works
there is no division of events there into past and future

there is, for example, there is a task
universal happy development
and this task is manifested to a greater extent

i.e. the Soul works
as a structure for the implementation of a person's task

and it turns out that by analogy with how God does it
if we want to get for example
Well, there is some kind of instant action there
so that it is positive for everyone

we must consider some actions
from the point of view of that

what can happen to people means
well, exactly those who need help
or just what can happen in Reality

i.e. why some signs of an event occur
well, which need to be aligned
but which in principle can not be prevented
management

but then it means there is such a criterion
that we should not allow the event to happen
Well as if absolutely clearly axiomatically clear
some of the most problematic ones

and any other spectrum of events
it turns out that there is already a choice here yes
either allow or not allow

and is the event there some kind of educational
for you
or for other people
or is not there

Well, from this point of view , well, you can imagine it like this
that the past is a lot of boards there
well how are the classes at school
and some rules are written in chalk, yes well, roughly speaking

and it turns out that the task here is this
it means either we think that some board can be erased
for example, it is not needed there at the moment
Well, everything is clear to us, we just need to add something on top
or some should be left there if there is space

and it turns out that based on this
logic is only in choice, i.e. in the freedom of choice of a person
or he allows but precisely those events
which cannot be named
that they are somehow too negative there

but he understands that he should understand in principle
that somewhere he allowed an event to happen

i.e. at some level
a person should still understand
why exactly did he allow some event to happen there

well, maybe in their control systems
at home or somewhere else in general

i.e. why didn't he take action there?
having a management resource there
why a person for example
Well as if I couldn't do it there or not that I couldn't
and how did it happen that some event
nevertheless it happened yes Well for example negative

and here from this point of view
it is the management of the past
i.e. analysis of the situation from the point of view of the past
by the way it should be very fast

to analyze correctly
and get results in managing future events

Here it is advisable to do the analysis fairly quickly

i.e. instantly receive information about that
at a strategic level
as if a distant development of the Soul
into the future into the distant future
get information
and do management at the level of the Soul

and having already completed control receive at the logical level
as if the status of the event

i.e. first it turns out that the event is changed for the better
and then get the logical type information

so this is such a peculiar action
which is well there in Indian philosophy
means , as it were, a structure of absence of action

i.e. you manage to do it so quickly
transform the Reality of the past
that returning to her
no action is needed at all what you took

i.e. everything moves as if by itself

but you have to understand that you are working
you must see your mechanism of work

and that's when you start to see it
then by the way, this is the controllability of the body
becomes almost complete in people
and he is a man who understands clearly
what is the concept of "diseases" there
in principle, such a concept may no longer concern him

he can be there on time
well, if only he could devote some extra time to himself there
if necessary
he can get better there in time

he can in principle do some special things
if they are there, it is possible that they are radically problematic
events
then apply the resource in advance
and they quickly mean well, let's level it out

and here you can see it very clearly
that the faster you do it and the more correctly it is more accurate

the better for the whole society

there is no such concept
what well as if "something remains somewhere"

in fact it's just skill and experience
and you made the management
received according to the Laws of Information Distribution
in the World exactly
creative laws
information reaches all people at once
at the level of collective Consciousness

someone has direct access
somewhere she gets there for sure
at the level there means natural information

and it turns out that you are simply gaining experience
in solving the situation
if we consider, for example,
how does God develop in Action in this case, for example?

He has some event
but He does implement the next event
anyway myself

i.e. God has this concept that
well, "there is a certain problem, for example, he solved it"
then here is the status of the information where it is located

Well, well for example, here you can clearly see
that well there is no such phenomenon there
that when treating some disease
so by management methods yes
due to the human Consciousness there
what supposedly can be for a person
some more, well, tense situations, I guess

because here
by the structure of the analysis of the structure of the past
it is clear that by gaining experience
On the contrary, he overcomes the situation

if he sometimes feels some kind of heaviness
then it means to a lesser extent
i.e. it means it is in his event structure
some kind of complex situation was laid down

It's good that he managed to manage there

and decide to cure someone , for example

he comes to the following situation
already more prepared

and it turns out that there is such a level here
advanced mastery
every person has this very clearly developed

just like every person has
there are arms, legs, let's say, physical organs, sense organs, etc.

the same thing is there
in the structure of the development of the Soul of man
at the event management level
in fact, there is already both past and future there
integrated such option

that there is always a line of advance action
where a person applies the whole range of skills
which he has accumulated there

and therefore the more he helps

the more he puts into this piggy bank, so to speak
some kind of profiling actions
some level of over-management there, etc.

it turns out that this concept means
what if a person solves complex problems
then it might be more difficult for him there
in fact, in this method you can see
that this generally does not exist

if you analyze the method
from the point of view of the arrays of information, volumes, etc.

and it turns out that the management is well past in this case
there is time of the past there is information of the past
this is a structure that is like a normal array of information
can be used
as a control system for something
through information from the past

you can control the impulse there with a signal
and can you control the past
there take the past
there enter into some array in the sphere
this is also a lot of information

and you can use this mass
simply manage future events

i.e. you don't even have to analyze it at all
the structure of the past as such
when you manage, you manage often
through some control space

it turns out that in order for the space to work, let's say
or your personal impulse is needed
or some intermediate links
build a light-optical model there

so here is an element of this model
maybe all the information of the past
or some segmental information from the past

and what is the advantage here
what is the information of the past
sometimes it works just like clockwork

always works according to the same mechanism

there are a lot of ^{well} informative systems of the past

there ^{for example}, there is a plant growing near the stone

simple model ^{yes}

there it slowly grows near a stone of the same shape
somewhere there in the rocky gorge

and if you take this information and insert it

into the structure of any future events

then form and function

from a logical point of view it is always the same

the plant grows and grows

but here is the abstract meaning of this information

in that, as a kind of canonized environment

which basically works

like some kind of universal module

we know the information of the past

we know what she looks like

this is the universal module

the concept of ^{some} abstract universal module

which helps to determine

sustainability of information development

because when a person works

with the system of the future

there are many dynamic processes there

and it turns out that in order to be stable

we need to create some points

which are ^{well} understood acceptable points

which he he knows ^{yes} on information

what do they look like

and here is one of the technologies of control through the past, ^{so to speak}

through information from the past

it's easy to highlight

or take all the information of the past

then look at what light-optical lines are going

to manage your events

and just move them a little bit

and that's all

and things start to improve

and here, by the way, it is very clearly visible
like in the slow motion version of the movie
there isn't even much dynamics here

the technology as I said is simple
the past is taken
is transferred to the structure of future events
and a branch is also some kind of mass of information
and it somehow affects events
The main thing here is to simply regulate

i.e. you use as if Well, the weight
weight increase information
and as a kind of light-optical lever
you don't need any additional resource

and the next element
take several blocks of known phenomena
there, as I gave an example, there is a stone growing, a plant, well, any
they took the bike there, remembered it, for example, it's somewhere
Well, we just abstractly remembered the bicycle in the past

he looks like a bicycle everywhere
and accumulation of this information
around this seemingly understandable level yes
you are building management
and then you don't need the image itself

you translated
received Perception at the Spirit level
and everything was secured and stability was strengthened

you know what a bicycle is
he is always a bicycle in the past
it can't be changed in any way

what is the advantage of this system
what are you recording
and you need exactly this element
you don't have a task to change

if you change it's already the next picture
this is no longer this segment of the past

and it turns out that we
By the way, this method works very well here

in antitumor processes
because that's where it is
a stable picture of some neighboring action is needed

i.e. the tumor as a stable mass
and if we introduce at least a plate of some information
which is structurally rigid

For example there is any structure of the past
any coordinate that is remembered
then this system gradually begins to stratify the tumor

because it is a tumor after all
the tumor has to develop
but the system is static
as an element of your Consciousness
and that's why stratification occurs

here further your task is only to deduce yes
tumor segment

also and by the way as an antiviral system
works very powerfully
because a virus is always a dynamic system
and if we fix the structure of the past
although in the form of separate plates
we put two or three viruses in the way
and the virus can be completely destroyed throughout the entire body
i.e. well i.e. it will become unviable yes

it turns out that in fact in this technology
visible
that the treatment of even systemic virological diseases
not a difficult thing often

to introduce memorization into the gene system
as the virus hits
and it often disappears instantly
literally there in a matter of minutes sometimes

but that means that's why it happens
that complex virological processes
there for a maximum of half an hour and they disappear completely
even those that would seem to be considered incurable, etc.

so it turns out that this is the system

technologically, if you feel it there and understand it
at the level of working with the Soul
she is very effective
true, not in terms of just the past
and in terms of using static models there
as fixers of stability of work

because in working with information
often it is necessary to determine some stability
well, some clarity
that information is some kind of array
which are constantly moving
and that's how to catch them there

for those who are starting to practice
this is often a process, well, it can be quite complicated
Well, sometimes it's even complicated
if a person is just beginning to get his bearings
in information

that's why these static systems are so simple
that they create sustainability
namely the structure of Spiritual stability
and what is most important here can be considered here
in the analysis of this situation
that we don't need the object anymore
we don't need this image of a bicycle because it's distracting

we just know at the Spirit level
that there was a stable phase here
and then we don't need her anymore

i.e. the image emerges as if Yes
he disappears from Perception
because it is not needed
we have achieved sustainability in the future
how the control point began to be used

why do we need a bicycle now
we just see where he was
where was the information about him
this is the point of stability

then it is clear why yes God created in the future
well, it's like a certain level of the World
that the future does not contain objects of Reality

from a logical point of view
there we can count an hour ahead
what's there, well logically we are developing calmly
anyway, the infinite future exists

but it turns out that we can say
about the current time

and it turns out that from this point of view
it's clear from this technology
what why in the future to keep objects
we need sustainability now

current time
this is an expression of stability
there are Souls
Spirit
Consciousness
collective level of management

and it turns out that these are the ones
well, some kind of concentrated stability plates
these are the current manifestations of Reality

i.e. in logic or something well there is space-time
like arrays and time
consider that the past is a certain mass of time information
then the current time is a fairly clear manifestation
there is a concentration of all these event plates, so to speak

they look appropriate in this case
like the plates exactly
there are no forms there, there are some other ones
and exactly like in the form of plates

and as if from this point of view
if we consider the concept
Well, there is an animal world there
and for example, there we will consider such a concept as "fish scales"
in the form of plates

then there is resistance with a large mass of events
and you can analyze why it is like this
and then in what time interval
for example, a fish perceives
movement

i.e. it is more concentrated
it means she has more manifestations
the structure of future events is obtained
in her Perception, etc.

i.e. it turns out that we can based on this
build an analysis of reality there yes For example
see what volumes of management we need most there
what can we do to draw some conclusions

and here we can study the future quite clearly
because as soon as we understand
that the object starts to float away when it is fixed yes
then the next position becomes clear

By the way, this is a powerful predictive system
Now try to fix the object
translate into the future
then it starts to sort of dissolve
i.e. it is not needed anymore
you have created a phase of stability

and then it begins
namely the forecast phase

and the forecast becomes very clear
and by the way it is very manageable
and that is why this is management through the past
it means due to creation
stable phase of control

This is where I end today's seminar.

Thank you very much for your attention
