

GRIGORY GRABOVOY
Teaching about God
Managing Space Properties
20.04.2005

The topic of my seminar today
this is my teaching about God
Managing Space Properties

in this topic i show
how to use
for example, real physical space
in order to implement
namely the management structure, and any
strategic plan for example or some local

therefore it is desirable in today's lecture
try to constantly implement your own tasks
in the structures of precisely visible Perception

for example, a person perceives some space
can perceive it simply as space
well, containing some elements of Reality, for example

and is it possible to allocate this space as if in its pure form?

here is the selection system
some matrix pure space
here is the main category in such management

ie we look at space
as for the amount that
in fact, it seems to be created at the same time
in control action
and at the same time we work through this same value

ie how do we form the Perception of space
this is how the management will be carried out
already remote, as it were, strategic areas of management

and in the structure of Eternal development
Often it is precisely the remote areas that are needed
consider
as a primary level of management means

and we will also be able to see
depending on our point of view

the level of action varies , for example, yes

ie to monitor the management structure
as if the goal of management
in this method you have to
considering between you for example
between the level of action of the Soul
or there is the Spirit
Consciousness
and the purpose of management
it is necessary to consider some spatial environment

and at the same time when you work in a spatial environment
it turns out that in the area of Perception
naturally you are in some kind of control space
are you working?

but here you must clearly correlate
control space
with physical space

and so it turns out that when you manage
you need to actually kind of imagine this area
ie know where your control area is

and here is the selection of this area
in fact, a comparison of Thinking
at a high level of management
at the Macro level of management
and areas of space
this is a special task

ie we must be able to combine
structure of thinking
with physical space

and actually hold the volume of control
in physical space
considering it as a space for example management
or the space of thinking

and in this case we see
that it is precisely this area of Thinking
which exists in the Perception system

when do we start working
through physical space
then we see that it is the same as God does
He has
and Thinking and physical Reality are one and the same

we can actually translate
just thinking
into the structure of physical space

ie the structure of Thinking should flow as if
into the structure of physical space

for example in resurrection technologies
there is a transition precisely into physical space
through the structure of the information plan
this is the one that exists near the resurrected

then there is a special technology
where directly, as it were, the level of interaction
with physical matter yes
it is expressed quite objectively in that
that the information is tightly linked
with physical space
and there is a kind of flow yes

here it turns out that from the point of view of logic
for example, to restore a person there
make sure that the resurrection of a person takes place
this is the most
from the point of view of space management
the most systematic, the most logical task, I guess

because in this case it is the transition
structures of thinking
into the structure of life
creates , in fact, a level of management
the same as a normal person

ie God who is Eternal
He created in the Image and Likeness
therefore, a living person is, as it were, an absolute Norm

when you start working from a logical point of view
for example, more of a distant plan

for example the structure of the universal resurrection

it turns out that in the structure of a person
in general in Thinking
the recovery system is embedded
in general, any level of information in essence
through the level of self-perception in general

if, for example, we consider the issue in this way

then here well for example, there is such logic there
that self-awareness is enough
only one living person
and the whole World must become Eternal
from this position

because the return signal
getting to a person
at the Infinite level
is reflected precisely by man

and from this point of view
for example, in the technologies of Eternal Development
here is the transition into the structure of space it is like this
that it was enough for God to take Himself
how the implementation of space immediately began

those. here is the implementation of space
as if at a deep level of self-perception
this is what comes from God
ie it is precisely movement like some kind of environment for example Yes
coming from God

that's if we start
visualize this environment in this way
in the system of perception
then it becomes simpler
level of control and management

because man is built, so to speak, or created
according to the level and likeness of God
he also controls the system at the Infinite level
practically there in many aspects it can also control

so if the level comes from God
what is space
for a person yes
and it kind of unpacks in front of a person

then the more a person perceives space
the more precisely it turns out through the properties of space
he can interact with God
ie solve problems there synchronously
and consider generally speaking
spatial tasks of God
in relation to a person
ie he can see his tasks in this case

and management structure
the tasks are already clear to people in general
you can just see your distant tasks

ie in fact this is the level of prognostication
such an accurate prognosis is enough
it is possible to develop a forecasting system
if we are very clear, then we localize
system of thinking
into the structure of future events

ie we can conduct Thinking
into the structure of space in fact

ie the idea of setting the task
is like a scanning level ^{yes}
level of information "collection"

because you can set a task
Well, let's ask some questions
but we have to set the task somewhere

and now if we are more precise, as if in the structure of future events
Let's set a task

For example, I can do this
having looked at some background level of control
in the form of a kind of glow of a white-silver color

we believe that this is the level of all information
expressed , for example, in the structure of reflection from an object of any

here we see all the information as reflected, for example Yes
we can perceive it this way

next comes the next level of information
as if development

and at the Infinite level
these are your personal tasks
the whole Infinite World for example Yes

and so that we can get the idea across
into this structure
we need to know the exact coordinates
where we derive our control at the level of Thinking

ie it turns out that we must
in fact, here in this way, well, set the task

that the more accurately we derive the structure of Thinking
with the purpose of precisely this action
the more accurately and quickly the task is completed

ie if we want in the future
to create some kind of situation
at some optimal time

then we must actually consider
in general future events are like this
what does it mean to receive information about that
that this event happened
This is a task that we must see
where we put, for example, this sphere, so to speak yes some
well which means getting information
or some event that happens
well somewhere yes For example
we must know where the event takes place

ie in fact we must be in space
control the level of further events

ie we must see in space
where is this event taking place anyway

for example, in the case of treating a person there
or some levels of healing
we see that well in this particular case
it is related to a specific person

and therefore it turns out that a person is just that
this is precisely the absolute coordinate value

exactly a person
and especially there is no need to search in the information

ie we just need to pay attention to everything
there or on yourself if you work with yourself ^{yes} or there on a person
and you immediately see it at some specific level

ie the level of Perception in space is such
that the space is ^{instantly} organized
from a person to you
transfer of information

if some other level of management
then you need to enter control there on the contrary

pay attention here
that space coming from a person

it's just like god does
It gives control that comes from you.

ie space also unfolds from God
therefore from man
the space seems to start to increase

and it turns out that we can very clearly do this in this way
define the management structure
which corresponds
the structure of collective Consciousness

ie these expanding ^{rays} of space
that's what people do ^{yeah}
people are separated
and are under direct control
from God ^{means}

and the investigative level of space
it's still practically
what exists ^{yes as if} around a person
and management of this environment
this is still a different task, this is an investigative task

because the collective Consciousness is structured this way
that the structure of the collective Consciousness
organizes space too

ie initially space was created by God

but at the same time, everything is implemented
also in the structure of collective Consciousness
somewhere there is action
any person in space

ie in fact, the Consciousness of God is included there
so it turns out that we can find
your own status
in any space system

and it turns out that here we can clearly see
that the organization of this, as it were, area of space
this is the level that needs to be looked for
from its presence in this space

precisely as if an informative presence
it's not like you introduced control there
let's assume at the expense of well for example goals

but generally speaking it should definitely be there
what you are considering is the amount of information
and you see where you are there
where is your knowledge

this is the ability to diagnose an event from the outside, yes

and when do you start diagnosing
in relation to oneself
then your diagnostics accordingly
becomes the most accurate

here to have an absolutely accurate diagnosis
you always need to see
the structure of your Infinite Consciousness
precisely increasing as if in an Infinite direction
for example from some point
you have such an infinite ray
growing towards Infinite development
or towards God for example

and at the same time you practically have
like such a management structure
that in general, based on the fact that from the Infinite quantity
you can get your own image

then it turns out you can get
in fact the image is up to that level
as you can see for example Well, some of my own

ie your normalized image yes
your norm
in their events
you get faster than information
about the root of the event about the source of the event

because the further you take control, the more
ie the closer you are there or the faster the speed
as if Well, you start to move towards yourself.
then you get it faster
First of all, information about yourself

it turns out that in space
here in this physical control space
where is the physical space
combined
with the space of thinking

we see here that there is a region
where your event is always normalized

because the first level of management
what comes from God yes
God's space
space of information coming from God
there is always a norm

ie we take and manage
how do we draw our level
completely normalized
what we see is the absolute Norm of all events

and this normalized image is obtained
Starts gradually well how to get back to you yes

how does God perceive it in general?
constructed events
ie He perceives them
as a structure goes to Him
Well, how does information flow to Him?
and so events seem to flow in

in His area of perception

and when you start to look at it the same way
then you see that it is precisely harmonious ^{there} to Eternally develop
this is control of your image obtained at Infinity ^{there}
or the image of just a person
God
and first of all your image

ie you must be able to control
ie the image of God is ^{as if} eternal
It always exists in the ^{form} of a human image.

and when do you start to control yourself
you have to in a very short time
get
practically controlling action
throughout the space of Reality

that's when you learn ^{it}
you will already learn how to do it quickly
it turns out that you can instantly
there is some situation to stop
from the point of view of this situation
there was no problem ^{for example}

ie the ability to arrange it ^{as if} Yes, actually
Well, maybe I should place the control space
in the structure of thinking
that you immediately receive the optimal event

from the point of view of, ^{for example,} treating a person
this is the level that says that
what can we build
^{let's assume} in the management structure near the person
quite a lot of levels ^{well like} external control ^{or something}
some external control points

where based on these points
ie by placing, ^{as it were,} spatial points
near a person
we can do ^{it} this way
so that external positions ^{mean} management
they showed ^{some} kind of light-optical levels
which come at a person like some kind of spotlights , yes

ie we are transferring control to the person
having previously installed some optical systems

and from here we see that at this level
we can record it ourselves
spatial place as if of a human image
in management

and pay attention
that there is such a method for example of treating a person
that he can be healed quickly and immediately
if we say its level is physical and informative
in general the level of his information
translate into a precise spatial point
corresponding to him for example at this time yes

from the point of view of Macroregulation
and his absolute complete freedom
from God's point of view, here are the tasks to be accomplished

ie we are not talking about that
that a person has some tasks
and in no case do we define it here
there are generally often tasks if there is no direct
are some orders there
for some joint business
and he still agrees

namely, a point in space is meant

that's how only a point in space
is revealed
like a point well For example there is the Eternal life of this person
it turns out that we have almost the same level
when it is implemented
this is precisely the system of his complete health
let's say there Endless health

Infinite space
contains information
Infinite health

and now having learned
means to extend space towards Infinity
we get this level of management
does it mean from Infinity that we have
the structure of a kind of unpacking of space

ie mechanism

for example , we have this in front of us
ordinary physical space
and if you ask the question
how did it unpack anyway
ie how did it happen anyway ?
from the point of view of the mechanism
there is no information level of management

then this is exactly the Infinite quantity
makes it possible to clearly see
the entire procedure of unpacking space

and here is the unpacking procedure itself
this is the level that actually corresponds
first of all here it is like this
This is the specific level of management
and in Perception
that these are the internal levels of a person

ie like internal organs
from the point of view of Eternal development
it is there that the Eternal Living
it means precisely in the information field
Let's say infinite quantities

and at the same time these spatial levels
as if Well, internal organs, yes. For example
they are not well as if they are not visible from the outside
just like autonomous bodies

I still have to make an effort and somehow remember
that these organs look like this

namely, this is the level of Eternity of the organ
ie Eternity of any level of a person
There are cells for example Yes

and the level of Eternity
is thus distributed in management
that you see such a distribution
like this light-optical power
which is actually enough
means in spatial management
find two adjacent segments in a person

so that man would be Eternal

ie well as if some kind of contact that exists
as a closing contact of the structure of Eternal development
is located in a person
like just like just two contact points

and if you know how to close them , so to speak
ie it is actually enough to close it once
and the person begins to develop, as it were
in fact, the structure of Eternal development
the structure of the Eternal Control Space

at the same time, this is not some kind of mechanical production
and the process itself of some kind of closure
This is, first of all, a person's natural standard of living

ie he must first recognize it himself
what do you propose to do
and independently, as if to close

this is precisely the principle of complete independence
it works
That's how a person is made, that he is bound to
in terms of action there or any level at all
he still makes his own decisions
initially

and here is the initial adoption of an independent decision
there is the initial level of the space of action
this is a fairly objectified value in general
which means the following

what is the solution level
ie the initial level of the solution

and primary space
these are actually very close and even identical systems

and that's when we want to understand
where is the space of Thinking anyway
coincidences with physical space
from the point of view of complete freedom of action

then it is just a coincidence that happens
at the primary level of action
when we see

complete, absolutely complete freedom of man

God always makes a decision
also in the structure of complete freedom of action
simultaneously
when being human
He's still making a decision
from the point of view of absolute freedom of action

and when you start comparing these quantities
you see how the most primary point grows
where does it begin
and space ^{yes}
and personality ^{there} for example a person

and here by the way you can see
coordinates of all systems of the world
ie that's when you start getting closer
to this point
you can find it very clearly
where any element of the World
any phenomenon ^{there} including past phenomenon there future
are located

and what is interesting is the future in this case
are close to you

the past is a remote control system
the future is closer to you

logically that's how it happens
and when we consider
namely control through space
then you are just moving there
in physical space
you always run into ^{each other}
in fact, ^{as if} with a system of the future
ie the future in space is closer to you

and when we start working
precisely in the space of the physical environment
Yes , you can call it that
then we must see that in Thinking
it's just that the structure there works almost the opposite way

Well, not completely the opposite.
but ^{in general}, future events are located there on the contrary

further from the physical body

I.e. the thought develops
so the level of control coming from you
this is what you, for example, build some plans
they start somewhere near the physical body
and begin to increase further
and you can kind of watch
some time in the space of Thinking

I am observing the action
for example, some kind of thought form or goal or task

here the thought form is different
from the action of the Spirit, for example, of a person or Soul

Because thinking is one thing
and the action of the Soul is often something else

and when you start to see
from the side for example as if observing
that coming from you somewhere in the Infinite level
calls out coming to you

that's how the world works
impulse of some kind
always causes the opposite yes For example
somewhere after some time or immediately instantly

then having learned or having done so on purpose
having built a system
so that the system of impulses coming from you
and the system of external control
was locked into a certain sphere
which is located at the junction of all systems
some source yes source of time
there is space, the source of knowledge, there is current knowledge
what do you need

knowledge they can be different
there are Eternal universal local etc.

which means you need exactly what you need now
this is exactly the source of the current level

he is, in general, very clearly distinguished
because you need to know for example

what exactly do you personally need right now?
and this is a special control system , generally speaking
it's like another source of control

and that's when you start
all systems are entered into a single source
then you see how God generally makes space

I.e. at a certain
well, some kind of external control property
at some level of external control
you see
how does god create space at all
being a human being

For example, God is a man
if he is well or something like that, if you put the question like that, yes
there he does something further, etc.

Well, this is God's work , if you look at it
if there is some external system of physical Perception
starry sky galaxies etc.
and how does He do something there further, for example
something that is not perceived there in a telescope, for example

it turns out that from this point of view
we see a very simple aspect generally speaking well in this problem
is there something in this level of management?

that it is enough to consider
not specifically there in the distance some path Infinite
what's going on there next
and look at how it is reflected
in any of the areas of space

and that's when we look at the dynamics
God
God's Actions in Dynamics
then we just have to highlight
it is the dynamic level of any
For example there is a photon of some light from some star yes
some movement

then enter into the space contour

and then look there
how God's work is done from the task

for example, ours, yes, what should we understand now

ie unpacking space
construction of space
namely the spatial environment
where is there for example well, an element of action yes
target control element

it's not just space as it is
namely, the construction of a spatial environment
acting to achieve the goal

so it contains your personal level
dynamic level as a consequence of God's work
and at a certain level there is the Action of God

Here the Action of God is distinguished by this
that it exists
as within a spatial environment
well, like some kind of approximately
cube if you take it without hard boundaries yes
as an element of space

it is possible to have a sphere in principle
but in working space
it's better to have some kind of cubic systems
but not hard boundaries

This is where you definitely need to keep track
so that it is desirable not to work with rigid systems
and if possible, translate
in spheroidal control systems

those.spheroidal space
because in the spheroidal level
distribution of space itself
more on the surface of the sphere
and from the inside

and in the cubature system
where we want to work in physical space
or for example to think in the same space
information is distributed more evenly there
precisely in the cubature system

pay attention here
that the cube is just like it exists

as a perimeter outline
well, like some kind of suspended gas
and this is space

and in spheroidal control systems
it is more precisely the surface of the luminous sphere

if we want to take into account all systems continuously
then you need to work with the cubic system

Well, this is for example in the treatment of systemic diseases
or where it is necessary to track cellular contacts

and if we want discretely and quickly
change the system
it is not necessarily only treatment of course
but also the Norm of events
then a spheroidal system is better
and enter the sphere into the nodal level of the event

what is a node level event in general

ie it's just a whole sphere
is introduced into a uniform sphere
same size

what you highlighted as a sphere
and marked with dimensions
at the nodal level it's elementary
it is the same size sphere

and you just take and impose spheres
there is some kind of vibration, amplitude, as if power is increasing
this is the flow of control

and it turns out that you actually get
influence on the entire system of events

and here if we start
introduce some other forms
then we can receive
another space management property

you can work on forms
ie select several forms
knowing which forms contain which properties

and generally correlate calmly
what happens for example in space
on some Infinite level distant from you

ie you can through super-remote
or some remote areas
bring the threads of control
already to myself

and how do you do it more accurately?
ie the more accurately you bring these threads to yourself
the more accurately you actually determine
as if to say the disposition of events
in relation to future phenomena

because you are in control
we must definitely think about what is in the future

this is the characteristic of management
through the properties of space
and also consists of the fact that
that you should follow the consequences

if you are in some volume of space
you manage
then naturally, except for this volume
exist
some further interactions of information

and here it is very easy to track
precisely the consequences
having rigidly fixed some system of space
you are moving the control to Infinite value

but at the same time each element of Infinity so to speak
it's still emerging
as a structure of the next space
ie precisely the final Perception
as an element of light so to speak

when you start to see
what is the next element of light
it also gives you light for example there is some
well positive for you
then you can put in more reinforcement
ie some filters that allow light
actually acquire positive qualities and properties

because you put
proper information distribution system

ie you actually do it this way
that light that passes through some kind of filters
there are light optical ones

it is already a useful light for you

and here is one of the properties of management
through spatial environments
this is the ability to combine spatial blocks
as if among themselves
so that with such a combination
we got the most optimal
most as if appropriate
your goals your tasks
control

ie, in fact, in spatial management
you can receive it in the form of rays of light
some control systems
regulate within the spatial environment
and receive it upon arrival to you
already aligned management level

ie the next one that interests you
strategic or something, systematic level
where events are realized
you know you control it

and here is the influx of precisely the management structure
to you as if
where else do you regulate the input source
allows you to control
it's like it's tough , like it's even if you compare it for example
from the point of view of the usual hard environments there
as resistance of materials

so if you have fixed it rigidly
system of spatial levels of control
then it is enough to vary very calmly
incoming light

and the light here acquires other properties
he is more rigid
ie light is just matter

pronounced hard matter

actually get by moving this matter
well, that at some distant level
some event is happening
because you are now like an echo of this event
some kind of light axis
Now you can move hard

and if you put in systems of some kind of levers
there are no control systems there
which are defined there personally for you

or let's assume they are more general
and you need to use these levers somehow

you must go to specific events
which you need in your opinion now yes For example
more urgently

or are these some kind of strategic systems?
and varying light optics in a spatial environment
we get a fairly mobile one
management model
where is one spatial block
which for example Well, it is there
the level of your Perception now
can define the entire system
if placed correctly
this block or some beam is there in control

i.e. the ability to move
it means that first of all it develops necessity
this is this, this is the level that you should see
what will happen ahead

ie we must try to do it this way
to control future events
still have to watch them

ie this control lever
he comes to you for example light-optical
but at the same time you should know
what happens in the future

and it turns out that based on this

you can do the management in this way
that in the future to build a structure in that place
where spatial coordinates are sufficiently optimal

ie it is not necessary to choose specifically there
well, any space with any properties
but choose a calm space

and build already in a calm space
any design
as much time as you need ^{yes}
can be given in this case

i.e. the ability to get out
from a constant dynamic control level
into the structure of a ^{seemingly} static system
and build some event there
This is a very important skill
precisely in the methodology of working with spatial environments
using the properties of spatial environments

and here ^{what is} important is that
that you at the moment of building this system
^{actually} do it that way
that you practically build all future events

ie the construction can be calm , ^{yes}
how can a person be
in a calm state
with an infinite number of connections

Well, first of all, this is a natural level.
the very first option
secondly, to do it technologically
it is simply necessary at the time of construction
track
all system changes
and introduce the following changes taking into account
by time

ie a calm state is a constructed state
in some spatial environment
and this is a constructed state
must take into account all changes in the future environment
then we get some kind of model of calm development

and that's when we start to wonder

and from the point of view of all the changes in the external environment
how to track it

then here it turns out
that tracking is being carried out
specifically your personal practice

ie any level of personal action
always associated with Macro changes
and at a certain level of personality
this is the load of the Macrolevel of Macrosalvation
it always exists in a person

it starts to show up at some point in time

and if we start it well as if means to consider
as a system of such external control
which is useful
somehow cultivate this system of management
try to make it develop more intensively
then we begin to more accurately manage the current state, for example Yes

and through Macroreality, among other things

and when you start to see the controls
already going well actually from the Infinite environment
to you in this way
that you go through all spatial control environments
there is another level of management
that it is possible to pass through all spatial environments

then you are exactly in the right place
into the structure of Thinking

I showed this way
that the structure of Thinking is built in the same way
through the implementation of any or all together
spatial environments

and it turns out into thinking
are contained in concentrated form
all possible properties of space
all possible states of space

and so that there would not be, for example, a possible global catastrophe
must be taken out of the structure of Thinking

Well as if some problematic nature of this phenomenon
what does this mean, for example, well, theoretically, it's possible
and we just need this from the sphere of Thinking
withdraw
then it turns out that this is not realized in space

and in the conditions that when we, well, we know there
that there are various movies there with such themes
then it turns out that it is necessary to output
not just there thinking that it doesn't exist
and technologically it is possible to output this information
from management
so to speak, to manage information so that it is not realized

and in connection with this
this is precisely the spatial coordinate system
it makes it possible to do this clearly

ie there is an array of space
where there is no possible global catastrophe
everything means as soon as we translate such an array
into the real physical spectrum
and in the future tense it needs to be translated
and in the Infinite Future

then it turns out that we have accordingly
the same control coordinate ^{yes}
ie we have the same thing in Reality

here is the translation of the structure of Thinking
into the structure of physical space
This is direct event management

and here it exists
another level of event management
which ^{actually} looks like this
what can be highlighted
namely the phase of direct event management

ie then we should see clearly
how events change
depending on interaction with them

ie we must know the predictive system of events
and then you can see
that when in contact with the event line

we can definitely implement it
namely the structure of direct control

ie there is a very interesting question going on there
what is the element of time for example
well which one have you ever been interested in before
he becomes like this
which begins to acquire personal characteristics

and under direct control
you start interacting
with space
as with the structure of a certain personality even often

well, that is, it can cause some impatience
why can't a person do this instantly quickly yes For example
or maybe he is distracted by something

and it turns out that based on this
this is precisely the structure of direct control

it has precisely in the spatial version
with such properties
well, some kind of universality and uniqueness at the same time

and that's why your impulse is there
or impulse in general of any level of management often
he can be so average
that in principle is the methodological part
this is how the impulse was formed there, etc.
is already part of the structure of its action

then you see
that exist in space
some connecting elements
that's how information is transmitted, yes
how is information transferred
in physical space
from the point of view of the structure of Perception

that there must be some elements there
like photons
which do not transmit spatial information

so here is the transmission
in spatial control system

when we combine
with the physical level of space
structure of thinking

it is defined in that and that is how it happens in action
what do you mean deeper yes
into the structure of information of Thinking
come in
where Thinking passes into space
and where is the space for example ? as if by itself

although in fact you perceive it
so you perceive
also through the structure of Thinking

but then how would you go deeper
into the control system
the more accurately you see
distribution of these connections

and what is especially important
it is the connections that characterize
there for example, the state of a person's physical body
means in action

ie from the point of view of improvement

in this case, we can consider such a level
as a system of action
for example at Infinite Distance

ie some spatial coordinate systems
may occur
and yet we can see
for example, the Infinite Structure
which always shows that everything is absolutely normal
well, like a hard light-optical control level system

and when you start to see this structure
as exactly the absolute Norm yes
in Infinite Distance
then this is the radiance there of the absolute, as it were, level of the Norm
it is a space that has properties
immediately where Thinking and physical events
of the same type

ie there the Thinking is no different

from the level of human action there

for example, just like with God it's the same thing
then for a person it is a remote prognostic system
which shows that
that this or that situation is realized there, yes

it turns out from a human point of view
God means Let's say more stable
in the transfer of knowledge to people
it means it shows and perceives and transmits knowledge
by distant events
which actually means they are translated
as events of action
one person there
and many people at the same time

ie for God
this structure means the actions of one person
and all the people so to speak
including all future ones in Infinite development
it's always the same structure

I am one person
does not differ from the entire development of the World
for all time

from the point of view of control space
here God is one and the same
ie here a person does some things
walks along some specific roads
somehow thinks through some situations

and the same thing is what is being done
to all there external and internal world yes

but at the level of Similarity it means systems
it is clear that when you are
precisely in the spatial environment
and move along some specific roads there

then the similarity to all situations is that
that you somehow act on the situation, yes

here is where the movement is for example there is some action there
it doesn't necessarily mean any

Well is it that simple or is there a special situation there?
but it may not be simple
what you do in this way
on the so-called Macroinformation

here is the connection of the structure
this information
with your personal level of control
this is actually an Infinite action
which allows you to clearly understand
what exactly is the level of Infinite life yes for example a person
this is a general level well, among other things
spatial interactions
ie the ability to perceive space
receiving a control system immediately

and so it is
a person must be present
in a favorable state in the Norm
in the spatial environment including

and when a person begins to see
what does this space look like
Well, it sees through and filters there.
interact with a person

then you can see that at the level of a person's personality
interaction with space
it is often a very precise and accurate value
which you need to be able to implement very competently

this is where the information is contained
almost all events
complicated here or not so complicated there, etc.

and the ability to react correctly
the ability to somehow fix
some form and some slogan, so to speak
allows to bypass in the future
a lot of very difficult situations

here's how to get around the most difficult situations
to a person
and be for example there is the winner in the management structure
and according to Macrosalvation
anyway, every person should be a winner
he must always see

what to do he has no opportunity to make mistakes for example

then in complex systems you need to see clearly
which is like a negative event
or there is a positive event
what is an event for a complex system
what is the difference

Well, it seems like it's the same thing
but in complex systems there are more connections
more optical intersections
so it turns out to be a different environment

if we think it through at all
about the properties of this control space
well, exactly where Thinking coincides
with physical space
so what systems are implemented there to a greater extent yes
what are the systems of some difference
between the normal management environment
where we say one-time actions
and complex

then we will see that here is a transition to a complex system
it is practically invisible to humans
he always has business
or with simple or complex systems

often he does not differentiate
as if in some automatic mode
what is simple complex
or maybe there is something simple there
it might get complicated in a second
and vice versa
and therefore so that there would be no such thing
so that in a second it becomes
for some unknown reason something is complicated
but on the contrary it was more manageable
A very simple trick is being done here

here is the light optics of all events
initial level of all events
is being considered
as the level of primary Action
and God and man
and therefore of some level itself

and when do you start
primary event light level
bring to task level
some kind of control is carried out

then here is exactly the transition
from you
to this level of management
this is quite a subtle and precise
there should be a ^{general} technological transition
when you are exactly the light of events ^{so to speak}
which is built through your action
translate into the structure of the spatial environment

while knowing that the translation
Thinking in Space
this is the first part of the task ^{for example}
but you still need to exit the space
into the management structure
that's exactly to bring to the goal, but ^{as if} in the system of goals already

that's why it can be distributed
this is your personal physical space
ie where you have the structure of Perception
such that the signs are
or multidimensional or some special ones ^{yes}
more complex control system

and in the future this is that level
that all spatial environments
which relate to the phenomena of Reality
such as natural conditions

they all ^{seem to be} focused
at the level of some kind of integration
exactly your goal and your task

Ie you can see
what is the goal as a dynamic characteristic
this is interaction
your inner
or there is exactly your space
with the space of the entire system of Reality

this is the structure of interaction
allows you to see very clearly
why exactly this goal

and why do you act this way ?

ie you can look through it and help yourself significantly
because a rigid control system is created there

ie it's not even dynamic
and the Infinite Goal can be revealed
as a rigid link structure

then you can work with her calmly
look calm
are there any external problems there?
and calmly work out the level here in general
when you practically can
for example, do it this way
what is the distant goal that you
Well, you could have looked through it
how can there be a system of some local manifestations

the distant goal turns into an Infinite structure
ie the beam goes to infinity

and the approaching goal gives Infinity
as if right away
the approaching target is immediately in the Infinite Environment

the closer you get to yourself
it seems to become larger in size or something
as an infinite quantity

so it turns out that we
Well, in fact, we have this management status
what connection
there is your primary goal
and Infinite level
when approaching you
shows that when approaching a person
we almost have infinite status
expressed precisely as a person

ie the space of a person turns out to be infinite yes
in its final form
This is the control system I came up with here
logically simple basically logically

because approaching yourself
we actually have it

increasingly, as it were, developing
An infinite form has been obtained

and this is where the difference lies in a person
when we look at a person
then or any of its elements is Infinite
which by the way simplifies his treatment there, for example
restoration of health, etc.

and any other elements
as an investment system
they are expressed like this
that in them the space, on the contrary, seems to narrow

and here is the difference
expansion-contraction of space
in finite forms
gives exactly the Infinite structure

ie it is human interaction
in this physical space
where Thinking coincides
periodically, one might say not always
with the structure of physical space
and there is a structure as if of the generator of Infinity

when a person understands this structure
he is almost complete
all sources of events

ie everything necessary
to make the optimal favorable event
there to regulate health if necessary
or just make the event optimal

This is where I end today's seminar.

Thank you very much for your attention
