GRIGORY GRABOVOY
The Teaching about God
Future System Management
25.11.2005

The topic of today's seminar
this is my Teaching about God
Future System Management

in this topic i show
in what way predictively
we can determine future positions
knowing what is going on around the manager

i.e. we control the current situation
for future processes
In fact, it is a predictive management system

and at the same time we highlight in the future as in information
namely the control system

because if we consider the management position
for example when it comes to healing
we need to know
which systems in management to influence
so that a person can become healthy

i.e., in fact, from all the information
which relates to the organism
we need to highlight exactly those centers
which determine, for example, the treatment of a person

and we consider this position as a management system

for example for God who has
equal flow of any information
management is the main value
i.e. direct for God is the norm, yes

i.e. His own reflection
His own level of reaction
gives the Health Standard

i.e. in fact, if God looked at a person there

the person is healthy it turns out [...]

if we want to see
this management structure
as a structure of action
for example, health-improving action
we must actually consider
how in the information space
There is , for example, such a concept
how "to God" here

here is the space of God He is looking

if we get into this sphere of management
then it turns out there is regulation there
i.e. standardization as a docking system
with the Action of God

and here it turns out
what exactly is the definition of a person's future positions
maybe it's the control system after all
this is the exact knowledge of any coordinate system in general

a person who turns out to be
in the information space of the future
he must have absolutely clear control
what happens at any level of information

i.e. in fact its action looks like this
that by moving the structure of Consciousness into the future
a person must recognize very accurately
any piece of information on the subject
i.e. in all connections

then it turns out that the control system of the future
is the structure of the human Soul
taken to a level where the Soul is a platform
for future processes

i.e. if we consider
for example the concept of "Souls in Time"
there in the present tense there is , for example, a state of the Soul like this

so in the future it can have the same state of the Soul
but the Soul is Eternal and has the properties of Eternity
by direct linear feature

i.e. it turns out to be in the future tense

state of the Soul
from the point of view of Eternity it is also the same

and in connection with the fact that the Soul does not change the properties of Eternity
depending on time

we can say that this is precisely the knowledge of the Soul
more recognized as Spiritual knowledge
coming from the future

Spirit striving for development
as for future processes
this is the most stable position
where we define places
where control points begin to organize

i.e. actually well like a conversation with the Soul yes
through the Spiritual sphere
receiving information from the Spirit coming to a person
this is the actual level
obtaining information about any process
and actually building these control systems
future processes

means control to the center
according to this axiomatic criterion
it is possible not only to determine
but it is still possible to build

and in this regard, taking into account that they can be built
as a system of actually future events
which relate to current tasks

but in order to build them correctly
can current tasks be defined as tasks
which in the future are quite specifically manifested

i.e. we can clearly say
what are our tasks today
they won't change radically there, for example
somehow they won't be covered
Well, first of all, there are the most basic ones, yes
for example the Macro Rescue task
it will be solved in any case
this issue is also being resolved somehow

and this is the solution
that an absolutely high-quality solution to the issues of Macro-creation
results in tasks being recognized locally
at the level of a sort of primary action

i.e. we have aspiration from the current time
for example, there is such a task, you set yourself a task

and then you project it onto the structure of future events

and whatever the present tense is, yes For example
any present tense
i.e. any events can occur in the present time
the future can always be built positively
in this in this level of management

because it is enough to follow
optically formed task
and this task is projected
to the control area of the future
begins to acquire Reality

so that time means simply yes here in Reality
on the platform which is marked
as a platform for future events
was under control

i.e. for example, you need to urgently stretch out some situation
can some issue be resolved urgently

then it turns out if we
Well let's assume we make the control like this
what we need to do is keep this section of time as if Yes

then we should see very clearly
all processes in connection with oneself personally

i.e. we should practically do it this way
that when control comes from you personally
you must follow your personal impulse
i.e. actually clearly understand
what is the future for you
in your Spiritual understanding
bodily from the point of view of, for example, the physical body

i.e. to clearly see all the connections of the physical body in the future
with all processes

and there your ideas and be able to differentiate
and also these […]

for example, there is one simple task for a person
there I decided to buy myself some thing yes For example
there in the future
this is how he presents himself there

he sees this thing for example yes
recognizes possible […] first
i.e. this is basically a household task
as if it had nothing to do even with Macromanagement

although the Soul usually doesn't care
does Macro Management
but nevertheless we will consider such a household task

and then the main task
be able to recognize yourself in the future
this is who […] the man of the future
how does he differentiate himself

i.e. in the current time it is clear
there are some processes of physical action there
there are sound forms there
Well, in general it's a common concept
"real for example there is no physical world" yes
or there is a "Spiritual world" that is also real, etc.

and for future processes
how to recognize your own actions

the first task is obtained
means awareness
its own kind of system of actions on information

for God as He perceives Himself there in the future
God, He doesn't change at all

so it turns out that God is in the present tense in the future
it's the same level of management
from the point of view of the perception of man and God at the same time

and that's when we start to consider
this point simultaneously in Perception
we need to consider
[…] Consciousness of God, i.e. how God Himself was created

when He recreated Himself
and through this point move on to knowing yourself in the future

i.e. to examine oneself accurately
we need to know
what we look like exactly in the future

here is a man going for this thing
but then he sees not only the thing
he should then look around
what's going on around him

and that's when you start
to identify this coordinate system
then it turns out that the first control element

you can receive information just like in the present
i.e. the same sources and the same ones, let's say well, detectors yes

or you can, for example, just receive information
in projection onto the current time
and then it turns out that this is the difference by the way
differently visible [...] information
this is human health

i.e. if we take, for example , a different type at the information level
there, for example , you imagine some future
and take the information
as if feeling myself there yes
let this thing be anything
you want to buy something or just somewhere

then you take the information from there directly
here
and here are two different streams of information, as it were
give you health

then it turns out that from the normalized level
i.e. creation of a second level of management
there is a standardized meaning well, what about health standards?

for example , there is a simple task there too
consider as God
in the physical body of a person
must ensure health for himself yes
at the initial creation of the whole World

He must provide
possible existence of a niche
where His personal Action takes place
and personal Action can be found
on comparative systems
i.e. one level of information and the second yes
something comparable

if there is a difference
there is like a certain [...] such a trajectory yes
the next level of the path of information development

then it turns out
that regardless of any levels of current time
there is always a niche that exists
between two levels of information

if you just ask the question

and say well in general that 's it
that there are two different information areas
then in principle it is clear what is between them
there is something third

if they are two they differ in something
there are different levels of approach
where does the division of these two areas occur?

means separation of the management platform
i.e. control systems in the future
this is the creation of a second source of information in fact
and the second way of obtaining information
not even a source but a technology for obtaining information

and it turns out we are starting to grow the future
already actually in the future tense
i.e. find here

we bring it to the platform level
i.e. to the level of your own Soul
we introduce a secondary system for obtaining information
i.e. in an instant way, for example

and we get the growth of the future
their own already controlled future

then it turns out that based on this

as soon as we begin to come to this future
so the task here is to ensure synchronicity , so to speak
more primary as if thought

because it means management is developing
some other systems of Thinking are added
and it is necessary to recognize, well , to create
well, create some kind of catalog, if I may say so
in fact it doesn't look like a catalog of course
and in the form of specific events there

then a person immediately begins to organize

and that's when the implementation comes
some level of management already in the future
for example, a person was cured there
if there were any problems there
if he wasn't there
there was some level of organization of events, etc.

then here comes the level of comparison

that when he planned
he was in some kind of state , for example , yes
at some time

and when is the implementation going on
here to control
that the implementation took place
it is possible that the state of the past
for example, well , which was like a state of the primary impulse
where a person set a problem and solved it

so that this state can be recognized in the same way
how is he in that past
which was real
perceived the future

i.e. the past should not be in Perception
differ from the future time

and it turns out that when we move on to the goal
and here is the recognition of what we are
except for some physical confirmation systems there
there is also a system of absolute future
which will happen anyway
positive means system

here is a positive one, it has this property
negative has absolutely no properties
even those close to [...]

well [...] this system is very flexible in dynamics
and in any case is transformed [...]

the system from the platform is not stable
because it does not have the element of Eternal development

any negative has a structure
as if final forms of information
that's why the Soul platform doesn't support it
negative development systems

and based on this we can very clearly determine
the approach of any negative status

another question is how much this status is
it affects you personally there

for example, a person usually recognizes
a negative signal is sent in a timely manner

he just might not react to it
because he thinks it's a form of signaling
and if you don't react to this
then it won't cause him any particular problems

in the collective Consciousness
for example, there are many parameters of adaptation
to negative signals

on television some facts from, well, stories of people around
in life there are sometimes no people at all
who may very well be familiar, say, far away, with a person
or there are close acquaintances

as a rule, there are fewer facts among close acquaintances
that's if we have some kind of accumulating information
from the side of distant systems there
from the side of people there who have certain experience

it turns out that here we can identify
the system that affects a person really yes
under certain conditions

this is where it happens
that a person can very accurately determine
what to do
so he has a task and he has to solve some task, for example

then it turns out that he can consciously do it
so that some kind of system well as if a negative signal
perceive

let's assume he is performing some specific task
there is some example of a nuclear power plant
you need to do it this way in any case
so that the reactor there doesn't explode

but then he is forced to decide
some sequential tasks
which may be quite complex and heavy
they may be negative there
but he must solve them
but it retains the main task of preventing the reactor from exploding

and thus he seems to be consciously going for it
to deal with […] there
for example , he can't keep up with […] signal […]

and he thinks that this is compared to the reactor explosion
This is just a background signal, you don't need to pay attention to it

yes it is […] it will be some kind of problem
there will be some noise there maybe
Well, such a reactor exists, as it were […]

i.e. this is already a person's internal position
the internal position is associated with clairvoyance there
[…] determining the place of the event there or something
in the information there in history, etc.

and based on the fact that the mission is, after all, Macrosalvation
then it turns out that there is a lot of information here
passes as background information

information that is in the collective Consciousness
as if approved
there with the same films or some examples
or some stereotypes

and the person sort of resets this thought

so that he wouldn't just [...] let's say so
all this is wide
it makes sense to use the following technological method
well, so that there are some special angles in development
avoid negative information
by the way, which is also useful when it comes to healing

speed up speed up sharply
the speed of development of future events
positive for you

and at the same time you are just a conceptual status
abruptly translate into the structure of accomplishment

i.e. the task of accelerating the platform
and the ideology itself that is on the platform
on transferring to that structure of the future
where the implementation takes place and the forces of the negative system so to speak
do not affect the implementation itself in general

it turns out that then the control level
must be located somewhere outside the platform

what is acceleration
in general, many people have information
here is the future we see that it is approaching for example yes

one thing we can say
that we can logically get around this
but what if there is no logical way around it?

there is still a level of tasks
and, for example, to avoid a possible conflict there
it is forbidden
because there is an ideology, yes, such

for example, the ideology of Macrocreation
if someone thinks that this is not so
we are forced to do it anyway
and we can't, for example , reduce the control speed
from the fact that someone is preparing some [...] yes let's assume
we still do it anyway yes

it turns out that here you can have a central system
to carry out most actively
just speed up on information bypassing

the biggest problems that are possible there
already from the point of view of stopping the speed
for example there are Macro creations

i.e. a very simple speed characteristic is determined
the main vector of information is determined
what is the main

specific events are defined
which concern this kind of project yes
i.e. what is determined, for example, there in Macro-creation by the positive

presence there well for example there are some vibrational structures there
the presence of a system for the development of knowledge

here in counter information
it is precisely this path and direction that is being considered
and already fragmentarily in the form of background information
[…] to the level of fixation of the next point
where are the negative systems
They still don't understand where it is
your control signal

and considering that the meaning here is this
we are installing a control system
to that point in space that we have defined

therefore any negative system
it definitely doesn't recognize the primary access level
to your control point

so the conclusion is this
that in a creative aspect it is always possible […]
in the main aspect of development

Moreover, it is necessary at the same time
well, some there may be a negative status
use it to strengthen your system on the contrary

i.e. let's assume to show some aspects of the system
that it works in any environment for example

and show that she is invulnerable there
from the point of view of some factor there
collective consciousness
which, for example, is not yet ready for Perception

and thus move the control
from one platform to another
accelerating through external control

and this is external control
if you figure out where the acceleration comes from
This is usually another person's point of view.
i.e. a technologist who cognizes the World Macrodevelopment
and transfers the system of Perception

i.e. you can speed it up like this
transfer knowledge quickly
in general, in essence, any external environment
but it's better to convey it to the person

and further due to correct Perception
acceleration is underway
because it is reflected
in some object of Reality

after all, we are moving space
not just from the point of view of
God as He determines the movement of the control space

i.e. It is actually if at the level of comparison
for God there is some movement
if there is an external reaction to the adjacent level of information

i.e. a person can reach this level with one hand
it turns out to be detectable
and then it turns out that there is a level of interaction
one part there with another

for God any element of the World
this is , well, a similarity, i.e. a schematic principle of interaction

that's why it turns out
that the presence of the second aspect of information
where there is a kind of diagnostic circuit
determines the next prognostic level

i.e. diagnostics comparison of two systems
gives the following development

and as a rule, if you make two or three accelerating movements there
then further on it becomes quite stable
harmonious development of some system there

i.e. harmony itself is not always there
some kind of calm, systematic movement
it is often about achieving a goal
of course in a macro-creative way
but it is precisely the achievement of the goal that is harmony

and sustainable development of the achieved goal
as one of the signs of harmony

and based on this we already have
on the platform built
for example Soul
The spirit of man
target level
level of external reaction of the external environment
and such a harmonic level as I already said
the line of harmony should practically mean to send
on the platform you built
the same signal again
which [...] platform
namely, for example, the Soul of the Spirit of Consciousness
towards the future

i.e. the signals must be equalized
in the Perception of God

to understand how God perceived the signal
does he see that they are equal, for example Yes
we need to see what God says to do next

if God says there, for example , do the same
i.e. if God has the same
it means we perceive correctly

if suddenly for this element
some kind of modification occurs
then we need to repeat it

that's why there was a certain philosophy

along the line of work of cause-and-effect systems

that here as if some element
Well, it counts no matter how he worked
it arises again and this problem will have to be solved somehow yes

as if here means to overcome
this is the structure of the collective Consciousness
must be considered from this point of view
God's work

then this is the level of God's work
there is also a similar principle
once a person has it
so God has a similar system

so there is a level of interaction
Soul and Spirit first platform
the second means this is a system of joy from receiving information, etc.

but for God the difference is in receiving information
it's his own decision
i.e. for Him there is no source, there is no inflow
He reproduces everything Himself

and it turns out that these are just different goals
different information means different goals

and then we will clearly understand
what if for a person
one target can have different information
then for God only different goals can be presented
in the form of different information

from this position
from the point of view of the technology of the control system of the future

and then we see that the interaction of these systems
in terms of targets
so we are from the information space
will be considered as our second goal
other means of information are not carried out already then yes

God considers that everywhere here
Well, with my Perception, the same as a human's
He can know all [...]
if we can clearly fix it
His position Thinking His tasks

it means He clearly records
the structure of future human events

and this line is this line another line
recognizing oneself in the future from the point of view of that
when God considers man's position
i.e. the exact position of self-understanding is obtained

and the information inside is very accurate
when a person sees himself in this way
sees in the future
he understands what is happening to him in the future

and accordingly then he applies
the same technologies
which he can apply in the present tense

i.e. knowing your exact position in the future
Well, in principle it's simpler there
because it is a multi-variant system after all

and then it turns out he can make a decision
there is something to do there is something to do
if he has to do something anyway
then it should already work in a control manner
and the management is done exactly the same way
how is it done in the current time

i.e. right now I have just determined
a very specific concept
future state determined
due to knowledge which is actually knowledge of God
according to the person's condition

and moreover, certain ones
in the current management model
i.e. from the current task
then the person can change his mind

and that's when we start to see
that God interacts intelligently
i.e. flexible Infinite Thinking
change of any form of information
as long as the person feels good

we are beginning to understand
that God sends a huge amount of knowledge
among which there can be no such thing that
that for example some correct solution has been found
He can't give

a person begins to understand
and the only question is
so that well how to load yourself up with something extra
think about it for a couple of extra minutes, for example
concentrate and still find a solution

and that's when we start this ball of knowledge
Well , let's assume , by the way, that some kind of pendant hangs
there which is on the information there
has the property of some twisting

and the task is to get from this level
first as if with a locomotive i.e. projective signal
on yourself
and you need to get it
usually on the physical body

when the signal from the physical body arrives
what is there anyway there is an answer there is a solution
this is where the favorable solution of information comes in
then your task

when do you start watching already
that the favorable level has been realized
it turns out that this is the level of knowledge here
it comes as an accomplished event

and that's when you see that your event has happened
and you can diagnose
because you are your own presence
already clearly define in the future as real
i.e. as a reaction to what is happening […]

i.e. you can't make a mistake
for example, so that there is no
possible global nuclear war there
there are no weapons of mass destruction used there
we can't make a mistake, we have the right
there for example […] what if the future there is not like that
[…]

we must clearly know and understand
what is it always about

and in connection with this it turns out
especially the issue of counter-terrorism

or so that there would not be the same environmental problems of nuclear power plant disasters, etc.
you also need to clearly see the external signal
what exactly is a certain
let's assume besides radiation yes

i.e. a person can receive signals about future events
we may not differentiate
this is precisely an attack due to radiological impact
for example, there was a nuclear power plant that exploded

after all, the main number of people
still receives signals from the future
and the question is if a nuclear power plant could explode there
then why don't they pay attention to it

Well yes, there is some peace there
[...] some government services there
they are forced to do something
security system

but the responsibility of man
within a legal entity
he personally might not be touched there, yes
if it corresponds to the specialty there, for example
and that's all

i.e. it turns out that if we start
consider the World in responsibility
then the responsibility is to hope for that
that some system will protect there
there is some [...] or there is a structure
except as an act of personality
in principle, it's not really possible

here from God's point of view if we consider
He can't rely on anyone. He does everything himself.

and when we kind of come into this position of control
then it turns out that we get there
not just there in the system of control over the future
and we get into a system where our actions
are provided
by understanding our personal initiative

i.e. we enter into process management
for example, there's a plane shaking
you won't sit there and wait for it to shake more

you need to take control
and how to control the plane as a system
together with the pilot, there with the passengers, etc.

and it turns out
or maybe during the flight

you must take all the concepts
what processes are happening
clearly understand how to manage these processes
and prevent an explosion, etc.

i.e. the question of management is a question of taking decisions upon oneself
in this case you need to see that the system is not working

then only a person understands
that he can and should take responsibility for himself yes
for what is happening so that there are no catastrophes there

it doesn't necessarily mean some big catastrophe
maybe it concerns personality
you have to be more careful with specific individuals there
because man is always free
and we still need to have time to come to an agreement with him, etc.

so what about the possibility of having time to come to an agreement
you can always
man is aimed at Eternal development
so there is a way to any person
make his life eternal for example

then it turns out that the signal that comes to you, for example,
from a regulatory perspective
namely the control system of the future
when you see in the future
the need to take responsibility
you then begin to recognize the signal
which you don't know about before

i.e. you start to actually read the information
for example there is radiological impact

and then the source begins
where does it operate from
as soon as a person as a manager yes
takes responsibility
Well for example there is such a typical example there

The Drugg party is establishing regional governance
responsibility for oneself within [...]
local branches are responsible for these regions

and here if something goes wrong
instantly the information gets [...] first of all
although of course any manager
can choose any point for example

but it is precisely [...] there at the initiative level
then another control

all information is in a very rigid system
such specific connections
this is what it means to somehow compensate for the situation
as far as possible control, etc.

and when we start doing management
by the way, this is also one of those generally simple examples
there is a control option on that
through means congresses of the party "Drugg" Russian congresses

for example, we bring information closer to the question
according to some kind of conditional control
to confirm the possibility there
exactly the problematic situation

anyway, let's minimize it
but the situation is developing

i.e. it means there is still an option here
what could be for example yes in the forecast [...] of the plane
for the transportation of impacts by transport, etc.

and here it means such [...] if it is planned
but it didn't come true
for example, there was no flight there [...]
but nevertheless it means that although forces were introduced nevertheless
the event began to develop
the question is, well, in the minimum [...]

but here the question arises
like in management, for example
from a management point of view
to put means Well, we choose one task

as for example from the point of view of action
the task in general is to set this is what we can do
what can we do in management

because in management if we set a task
specifically […] i.e. direct input of information
this already turns out to be knowledge of events as if direct
and here you still need to set a control signal
so that she doesn't record the event yet

and that's when we start to see
this is the angle of the situation
then it turns out that we are from here
from here we can see practically
that rather calm level of Perception
in the current tense
which allows for the next level of management

if we see an event for example not in a fixed way
then the reference level is like Macrostability
is the level of normalized health at the current time
for example, there are all the people

i.e. we believe that all people
so this is what happens in the current time
that we highlight the Macro-stability system
and we consider what this Macrostability means
i.e. the maximum level of health is the reference points

and here we come to that
that there is a management system of the future
systems that unite people
for example, through the level of health regulation

and we can do it so that there is no explosion at the nuclear power plant
there is no explosion there, there is no system there anymore
which may even be closed there
or is considered not dangerous
so that there are no terrorist attacks there

we need to spread
the level of such collegial management
in the information system
manage the system of the future
reflected more as if prolonged
if it is collegial management

i.e. if we have a Health Norm for all people
then it extends to more such yes [...] future

because the health of people is standardized
and the signal that we receive for each person
gives a very clear definition there
for example, there in many periods of the future
those. long-term prognosis

i.e. it turns out that there is absolutely accurate remote prognostication
provided that we can still see the signal
already reaches that level of a person who is Eternal

Every person has a level
which is Eternal

if we consider
that the signal gets to these levels of people
then we see the future absolutely accurately, it turns out then

i.e. it means the ability to see the absolutely precise future
this is possible when we actually work
in the structure of the Eternal development of people

in many ways we must guarantee
this is Eternal development
on the terms of providing technologies there
which allow you to do this

and when we start to consider this structure
it turns out that the control systems of the future
this is the level that unites
as a private management i.e. the platform of the Soul
the goals of the events of Consciousness there

and at the same time
collegial platform
which relates to the present time mainly

i.e. it turns out that your event is future
your Soul has evolved into the future or it is there too
and to a greater extent the present is formed
collective level of people of the current time yes
it turns out

so that's how it is, after all, all events
manifested in the energy that is now

internal [...]

and as soon as we start this period of time
consider
Well there is a time gap there
well let's assume we are considering it
some kind of layer of information there, yes

i.e. this layer of information includes
there, for example, is all the current time management
which provides for example an Infinite Future
i.e. the layer itself must be Infinite

so it turns out that this is the Action of God
i.e. this is actually the presence of God
and He gives any level there
at least the micro level, at least the entire Infinity of existence

i.e. we see that it turns out that the Law is being followed
do as God does
i.e. Eternal development Eternal life
this is the level that determines
finding connections
between current and future processes
from the point of view of human physiology

this is very important
such a physiological approach it exists

i.e. human physiology must be ensured
the ability to compare and accept
signals of future events

here in principle if you consider
there is a question of the future
as a subject matter question, as if mechanical, yes
or there is a physical physiological-physical type
there is a physical level with the physiology of the body

and we consider such a simple example
There is a person there who is sunbathing, yes
At first he feels unaccustomed to the rays specifically acting there
as if it may not always be pleasant
but nevertheless processes are taking place

i.e. these rays have a certain property [...]
normal state means

Well in general, it turns out that the specific rays themselves
form a kind of unusual state
which leads to tanning yes For example

and here why is it unusual
skin color changes yes

the same signals of the future
they can be manifested
in the form of specific physical systems

and if you teach human physiology
perceive the signal
i.e. in order to obtain specific rays
a person, for example, sunbathes in the sun

and to receive a signal that ensures the Norm
there physiology Norms of events in the future
to receive a signal of the future
need to adapt physically adapt
the organism turns out
i.e. to sort of turn it around and direct it
to receive these events

This is another factor of the control systems of the future
because let's see , for example
what is the difference between the organism of the future
from the organism of the current time

Well, basically, just some processes, yes
but in principle, physiologically, in general, it's not even anything

so if there is a distant future there
there are processes that relate to the aging process
then it turns out that a person does not age
it should just orient physically
your body correctly
in relation to the flow of future information

and then you get the structure of aging
it will be excluded from the structure of interaction there
with information of the future

we can be there
having excluded simply technologically having excluded
this element
what is aging

Well, for example, there is one there
some collective or there signs of this phenomenon

then it is excluded and simply considered
spectrum of the future
these fragments are simply eliminated mechanically
volitional control or any control system
and that's all

i.e. the control system can be applied
as a system for removing unwanted elements of information

the same thing when treating a person
it's just recognizable on everything
its structure of interaction with future information
at the level of field-physiological systems
and then we begin to recognize
what needs to be finished there yes

here is the connection of your Soul projection in the future
with the collegial level of a person now
after all, for a person there is simply a universal [...] health
happy is he who lives there forever, etc. yes

i.e. it turns out that this is very
in general it's so informative
very simple and understandable system
there is no need to specifically recognize it there
it is understandable at the level of the human Soul

and the connection means systems in the future
makes a very clear difference

i.e. as we said, if a person creates
two levels of information source
in different ways
then he can perform actions
if there is a comparative [...]
comparative action

visible at a collegiate level
and one person
which is there in the future
from the point of view of connecting the idea of tasks yes
for example, there are ideas of Eternal development

then there is a future for him

has Infinite stats

i.e. it is only worth the idea of Eternal development
for example, develop into the structure of the future
as a system there are infinite connections

then we see that the person begins to understand
what for example Infinite Future
this is what is determined there by his personal action
periodic for example Yes
respond to some information in a timely manner
maybe this information is needed
maybe in ten or twenty years

i.e. we are even talking about the fact that something needs to be done urgently
often often The human soul prepares itself very much
to some information that needs to be overcome
i.e. the preparatory period is underway

Well for example there is a feeling that maybe something like this is possible there
that there is some kind of typhoon somewhere
its noise is growing
the man understands this
and the Soul begins to gain experience

i.e. it gains a level there over the years
and then calmly overcomes

i.e. the typhoon remains somewhere
it seems like there's just a person there, for example
there he is already doing something else in another place
or is already taking shelter from the typhoon yes
i.e. here

but it would seem that he performs one small action
but the systems converge very slowly and very gradually

and it turns out that if we from this point of view
let's consider
event construction of a person
here in terms of management
event construction

then every event is obtained
this is a period of, well , many thousands of years even preparation
to the implementation of events
not only a specific person

and in general, for example , in general, well, he moves society
there in some separate social groups of systems

and then it turns out that there was no
there, for example, is some kind of even local catastrophe
there is a task to avoid disasters at all
exclude "death" as a concept for example

and when we achieve this goal
then it turns out that we exclude
the structure of the possible development of a negative event
from, for example , some distant time
well, in fact, for example , there from Infinite Time
although negative events
do not have such a sense of Infinity

as I said Infinite level of development of events
only a creative event

but nevertheless at the same time we are considering
somewhere very far away yes
let's take it and artificially derive it
to the level of very distant time

then it turns out that the event is being formed
we see it
and that's when you start to look at the process like this
then you see that generally speaking we see an event
quite transparent for a very long time

the only question is that the human soul is designed this way
that she doesn't record
because of the collegial participation
there is movement
to a common goal, for example, Eternal Life

Well For example there, like fishermen catch fish with a net
that's why they catch something big there
and what are some future processes, future states?
these are negative
they may not pay attention
there is such a common goal of the current time for example Yes

and here is the task to make it so that
Well , the fish was intact, so to speak
in an ideal task

the management task in this case
be able to source this negative noise
recognize so
so that when approaching the point of events
the negativity itself was already disbanded
and the man continued to act regardless of the possible method

i.e. the problem is freedom, yes

so, well, that is, every person should be free
he should not be limited by possible negativity
there in their events

and here as a question
a situation arises that many people know
that there could be a negative status
however, for the purpose of recognizing the system
there are studies of possible properties
make contact
and receive, for example, a negative signal
i.e. some negative events

if you bring it to the level of logic
there is precise control information
then it is not necessary to make contact with the negative system
it can be formed before the contact system

then the question of one experience for example arises
this is the meaning that the collective consciousness says
there are some negative systems
how to deal with them at all

if a person is like this, well, let's consider this option

let's assume there are no more people there
there is one of the systems there, let's say it's real
which are really negative there

then what is the point of his personal experience yes

here from God's point of view
He did not create any negative effects on man.
for the Eternal life of man

it turns out that the tracking criterion
is the task of spiritual growth of the individual
i.e. Eternal development

then it turns out
that there is a concept of "negative" or "positive"
enough it seems to be leveled out
such an understanding comes
what is the philosophical aspect of management or near philosophical
where it is perceived in generalized parameters
some situations there

and then it turns out that the level of personal choice
here is a personal choice based on the same personality
this is one of the main ones actually
by and large for Eternal development
control systems of future events

i.e. when a person chooses
and if he chooses correctly
then there is no macro negative
i.e. it is again a question of technology

if its control system is implemented accurately
and for example, it has a fairly precise development

i.e. he recognizes and considers that why he should face it
he needs to gain experience there
it means that it turns out that his personal experience
that's it in general as if the tasks are just simply Eternal development
and that's why there is so much information in front of him, yes
and so much will need to be done

i.e. it turns out that this is precisely the target task
she just calmly replaces
the task actually, well let's say it this way
the task of analyzing a situation
from the point of view of contact with this situation

and that's when we start
how to recognize such a development system
it turns out that it is very useful
for the future for human health
know future events

then there is no point in checking there
where is this disease
i.e. because contact systems are not needed then
a person recognizes a system

only from the point of view of the Infinite Future

and the Infinite Future must be ensured
normal health
well, practically the health of this person

and therefore he constructs each subsequent interval
i.e. building as I said
the system begins to develop
it starts to branch out and grow there
his future events
become more sustainable in the future
each time

and then it turns out that here he has the criteria of the Norm
from each point Health Standard Health Standard
then he will be healthy everywhere

i.e. he starts the system in the current time
increase
Well, he has to control the system
thus develop
to increase the signal level of the current time

i.e. projection onto the current time
should well the word there is "applicable" apparently
at the first level, how to actually apply
or even endure somewhere
a fairly dense flow of standardized health
all future events

this is also the amount of a certain light of information there, etc.

and it turns out that then
accumulated health signal
in the Infinite level
at this point it looks like
well, for example, there in the present tense

but considering that we are making an Infinite signal
in any aspect
then we can get by with Norma and the past

so one of the peaceful healings of a person there
health restoration
if there are any problems there

is the translation of the signal into the past tense
and thus the saturation of past events
standardization
to make the future more sustainable

i.e. for formation
control point of future events
it is necessary to create the Norm in the past it turns out

i.e. in fact it looks like this
you take again reliably find exactly […]
there in memory for example
and constantly find your restoration
at some level of the past

and in the past the position of self-perception
it is different from what is in the future and what is in the present
the signals may be the same

signal in relation to the past
differs in Perception I mean
if the signal is relative to the present

if you think about it
How are letters written in general?

for example here you need to highlight
writing structure
Well for example, letter forms, numbers, etc.
and the connection there of the future in the present, etc.

for example, there is a number or a letter, you need to track processes
although you can, as I said, there is simply in mathematics
it is expressed by some specific values

in language it is in the form of text elements
in the form of a text description system, etc.

and it turns out that in the past
if you saturate the past with Norma
we get a decrease again
in the present there is a decrease in the future

and here is where the main level of action exists
as God does
He actually connects the past too
points of the future

how we will unite the collegial Consciousness
for example, your Eternal Consciousness there
with the future
and with the Eternal state of the Soul

then for God this element is close
Everything is available to him
He takes, for example, an element of the past
and fixes on the system of the future

then it turns out that we can take and build
a sufficiently large value of the Norm in the future
because there is time yes

take some element of the past
For example there is one corresponding to that
what kind of restoration needs to be done there

and we will build information
and how simple it is, well, we accepted it
like some kind of sticking even
mechanically looks like light optics
corresponding to the past and to some element

connects to an element that is future
well and there is a constant increase in meaning
of this organ

then the only thing that is accurate is that
so that a person goes through development into the future
I understood how he goes, he mentally somehow
where does he receive these signals
from what he will follow

there must be a connection
God built the world but where are the investigative elements
how one element recognizes another

i.e. let's think about it, there are some ways of communication in the World

also a person can walk
here to your normalized state
well there to the Norm of events

then start in the current time

recognize signals
there is a concept of "superstition" [...]

and when we start to go
not from superstition but from specific signals
i.e. here we will call it like this
because there is a signal of this type

as well as simply understandable absolutely clearly known
what and why should be done
Well when a person
the word "physical vision"
you can see what needs to be done, what needs to be avoided, etc.

the same thing needs to be open and direct
look at the information
we need to understand clearly
what to do and why you need to do it

and when we come to this position of management
we see
what is the Soul
Spirit
physical body
merges into the action that God has appointed
in front of you

those. you recognize the action
but you are already acting
a completely unified level of management
you are optically united

and it is so clear that a person is a mono-personality
i.e. a unified management system
as a person

This is where you start to realize
it is the connection with the whole world

and that's when this level of interaction of awareness
with the whole world
passes
into the system for example further action
a person gets into
in the usual there focus, let's say, of the collective Consciousness
where everyone leads a normal life
well, the so-called "regular" one

and in general it means as many there probably think
who is not involved in management
everything seems to happen by itself

although naturally due to universal connections
anyway, a person does everything
and Macrosalvation

and here is this exit level
into the ordinary system of collective Consciousness
if we want to introduce the concept of "Eternal Life" for example
then in this state that I spoke about

where is the connection with the whole outside world
and man is in unity
with all control systems
well, it's like he's at the level of complete control
as a person yes

i.e. he simply leads a naturally free life
but he understands, reacts, determines
logically then it is clear to him that he should live forever
Well, the main thing is to understand and just pay attention and that's all
means something

and then it turns out
that as soon as it moves
into the structure of a kind of collective Consciousness
where they don't know it yet
then at his mental level, a certain imbalance arises
he has massive information in the collective Consciousness
where this is for example is unknown

on the one hand he knows how to do it
when under management

why do I divide
control point there
and the point of achievement there
this control point yes

because not all people are just craftsmen
there everyone has such a state
there is no need to move it at all

it would be enough to just set a goal
the goal would be realized [...]

they took and set there the goal of Eternal development

and that's all
began to live forever
technologically, as if they would begin to be implemented
concrete and physical actions
for example the surrounding world

it turns out that the task when presenting this information
it means transmission
of course there will be resistance
as a system of new
i.e. a system that gives this effect of some kind of separation there, for example, yes
from the established level of Perception

and at the established level why is it like that
well it turns out not well It's sort of regulated or something
in general, a person cannot be distracted
and he won't want to live there forever

Well, first of all, he thinks there
let's assume the first one meets that maybe it's not possible for example
Well, for example, they convince him there for a number of reasons
questions of some kind or another start to arise, such as, etc.

so here is the next level of management
management of the future system
this is the ability to conduct explanatory work
among people actually

i.e. on the usual physical level there
be able to show
that at least such a philosophy exists
there is such a point of view
that Eternal life is achievable there
there are results there , for example , a thousand thousand already there
where the disciples according to my Teaching have reached
specific management results
they used a specific method
achieved, for example, a complete cure there
from there, let's assume there are 4 stages of cancer or AIDS, etc.

I do it myself, which allows me to overcome
It would seem that there are things there that are quite problematic

and the events and everything are overcome
people they should be just in small things
just like that, like in small things
but event management

in event Reality there is no difference at all
what to overcome

there is a situation where there is simply a concept of "accuracy"

[...] to what extent the event could be normalized
that's another question
and we don't discuss it
we say yes
if only some diagnosis is recorded there
understand that it is possible to manage the event
It would be better if this didn't happen at all
there were no fixations even close

and therefore the question is that many people overcome
Means Well, maybe there are some larger systems there
but we are only interested in one thing
we are not interested in what could be negative

and based on this
we see very clearly
next management level
processes of the future

what is in the collective Consciousness
there is a concept at the level of, well, let's say it this way
socialized-systemic Perception
present tense
for example there in 2005
what does it mean there is a level
who doesn't have such information yet
that there, for example, is Eternal Development

and here is the transition
from the level of Eternal
i.e. the transfer of this knowledge through Eternal development
into this system
well these are the people who should know
and just kind of remember myself and actually see
their systems of Eternity

and feedback, i.e. the ability to actively interact

this is also a social control system
which is determined by that
what should a person do then
let's assume to spread knowledge about Eternity
i.e. must do something

maybe it's not necessarily wide open there
may not necessarily be in the form of broad lectures
although this is more desirable
because you are open if there are any lectures then

or is it just a public broadcast?
knowledge
there may be video internet
it's much better and people actually learn faster

but also mentally, at least simply, even spiritually
work with territories
work with people

and it turns out that over time in any case
here is the quantitative work on the system
in this regard
anyway, practically in a short time
it will be allowed
those. distributed in the information system
what we will already see is already visible right now
the result of this experience

i.e. there is, for example , a hall there
people come who have everything
information about Eternal life
They, as I said, prevail at the level of knowledge

and at the level of Reality many
Well, accordingly, for example, by region management

i.e. the ability to highlight
this system of governance in the modern world
ability to interact so well let's put it this way
with people who do the same thing
there at the level of, so to speak, partners or associates
in this case, let's say those people who work together in the party
there or in some societies
i.e. this is also one of the special ones
social control systems

because we come to that
that the tasks of the individual are connected with society
in this case
and precisely with Eternal life
both society and the individual

and when we start to see here
Well, there's a simple philosophical question there
why does a person live at all, for example?
Well, for example, there is a point in living there forever, yes
many people there can answer like that

i.e. the task of life in the Eternity of life

That's how the question was posed simply as a task

for example, there were the tasks of communism
there were some third tenths of the tasks there
but we have precisely the task of Eternal life

This means that we can also do this task
easy to install and easy to execute.

that's when we put it like that
Moreover, we see
that technology really allows this
Human consciousness, so to speak
a person can simply do this

then over time it will still be like some kind of positive example
he will be reflected in society
as a system to follow

and by the way this time is not so long, there is still time left
to the exact level that it would be widely followed

i.e., in fact, all people understand that this is correct
improve one's health through Consciousness, for example
to be able to do so through Consciousness
there to prevent plane crashes, nuclear power plants, etc.
simply due to the Eternal abilities

and this can be learned in a completely standard way

In my experience, pilots were trained in literally three lectures
diagnose the main systems
who have never heard of it at all
not about extrasensory perception at all [...] not about anything

that means because they fly planes themselves
that's why they always learn quickly

and by the way there is no obvious case
example , a pilot was trained there after a maximum of three lectures

and basically I literally just give one lecture
especially if I'm showing practice
there are some planes right there in the stream
immediately begin to read information

i.e. there are essentially no problems
in the information transmission system
in cases where persons are interested

the pilots are really interested

they are airplane drivers, they understand
that he differs from the passengers first of all there
sometimes pilots [...]
by the way, first of all, basically
Thinking Responsible for Passengers

so it works out further there
what does it mean because he has responsibility
he quickly opens these systems there instantly

and why is this
because he sees real events
that he is flying on a plane

so if the predictive vision
develop to the level of a possible problem there, for example , at a nuclear power plant, yes
possible problem with some typhoon there
with some tenth element
personally related to a person
then naturally you will learn very quickly

means an element of information transfer
is to transmit knowledge
about the precise diagnostic future
must be transferred to a person
what does it have to do with him personally?

as soon as this person understands
that he has mastered this system of knowledge

problems with mastering
there is no complicated course there
without any formulas there
built only
on the system of reaching connections simply
between Consciousness
and there, for example, external Reality

it will be a completely elementary thing
which can be carried out there in schools, etc.
which is still being done

and it turns out that the next control element
here in this control system
at the level of the future
is the ability to link social processes
with the ability to provide accurate and timely
the ability of a person to learn to predict
your future events and absolutely precisely

this is the task of absolute accuracy of prognostics
it is the main task of management
in this case

and that's when he starts through the structure
so we and events
predict
again, it is not allowed to record negative information

need it in a timely manner
let's start structuring
possible negative events

and then it turns out that based on this
we have this level of management
what is it that we are looking at exactly
for example, a specific point of implementation
we must also see it in reality
already in an improved state yes
how do you feel about the current time, for example?
and we perceive the current time

means the task of management
is to have
creative favorable for development
events

at the same level of clear absolutely Perception
future events
how a person perceives, for example, the current time

i.e. Perception of current time
should not differ
from the Perception of the creative plan
for this person in the future
well there for the whole civilization

which means that the following action occurs
the same as for God
He is everywhere one and the same.
although it changes the events of the World

then to act similarly
a person who is in such a creative future
must determine
how events are organized personally by him

after all, God Himself organizes all events
so He so that He would not have a difference in management
He must see Himself.

how does he organize events
Myself
at that time

then He will have their differences
between the present and the future
because once He understands that He organizes Himself
then what difference does it make to Him

there is a Personality who knows how to organize events
what is there now and what is in the future

this means that the tool is knowledge
i.e. the ability to manage the information of the World
in general, by and large

and yes, the only thing that needs to be monitored in this case
only that knowledge which is applied
they are accurate

i.e. now knowledge is applied one way, for example yes
and in the future the knowledge has already been changed
it might even be a different situation […]

maybe the parameters are favorable and calm
but there is also some knowledge there

that means and therefore here you need to be able to do just that
this knowledge is so recognizable
i.e. the image does not recognize itself there
where is it located yes
he understands what it's about but he needs to recognize it
that his knowledge is prepared for the future situation
i.e. diagnostics from the point of view of one's own capabilities

and for this you need to be able to mean
if some knowledge is not enough, for example
You just need to add them
from the current time

then look from the current time
what is needed for example
connect in an event picture
there we will suppose to connect
events
with some control structures
and come already prepared
to resolve the situation

then it turns out that this is again management
from the current time
this is again freedom of the individual yes

i.e. as soon as we begin to recognize the signal
it turns out that work on self-development is actually
taking into account direct control of future events
this is the system of, well, actually, direct control
where we have the opportunity to manage comparable

i.e., moreover, it is better to have better quality management
directed so
so that , for example, some elements would be better

i.e. we have, for example, management
we know that it is desirable to improve something
if there are any problems that need to be solved
i.e. improve
and you have to constantly improve

and here is the next level of management
which provides
well, like, let's say, real ground under your feet
i.e. the level of Reality
creation of physical matter yes
how is the earth structured
for example why does a person have stable soil there
underfoot

so this is the level of creation of Reality
the ability to influence Reality on physical Reality
so that there are no catastrophes, car accidents, etc.

this is exactly the level
where knowledge can be supplemented in a timely manner
and influence the structure of physical Reality

I think this element is very important
in the structure there is a cure for complex and serious diseases
those that may possibly be there
but they won't happen for example Yes
i.e. there is protection from radiological impact, etc.

and in principle, for example , here at one time there
when working for an airline […]
it means we worked on such controls
we were engaged in general such actions were carried out
for monitoring background radiation
aircraft which we for example […] Chernobyl Nuclear Power Plant

and that means when will the planes take off?
technologists who have mastered this control
it is enough to simply reduce and […] clearly fix
radiological background there
literally to the background level
although during landing it was often significantly exceeded
many times

then at the expense of management
it leveled out literally there in a second
a seemingly large plane
Here the technologist perceived it logically
Well, it measures radiation there.
there […] are tall

literally seconds
instantly […]

although [...] was carried out
the background hardly decreased
if there [...] for example , etc.

and it turns out that the situation here is connected with management
it is such that it can be technological
apply management in practice
from the point of view of the forecasting system there

for example, we installed it on airplanes
management i.e. directly such control systems
on the education system what
what I taught to the pilots themselves
I have had courses since 1992

so I was just giving control
where they set themselves simply
to bring to some state
so that the background doesn't just take over him

and local areas were set up and found confirmed
what they managed to put there
some kind of peculiar fields [...] counter thoughts

and I think that based on management
which is kind of accessible
in general in the aviation environment
there are a lot of illustrative cases
when a person, due to specific capabilities
it might seem physically already
his [...] physical instruments showed
so in these cases, in general, there are quite a lot

you can say
that the control is taken over by the person

and here is one of the control points
here in this system of managing future events
this is the ability to provide around the physical body
Norm of events
no matter
what is happening and what knowledge exists in general

for example, knowledge of the collective Consciousness
what person is there if there is [...] there For example [...]
for example, like a glider, it can't fly for three hours.
there were cases

First of all, there is Veremey Boris Ivanovich
famous test pilot
[...] level two was the case
landed such planes

and physically the first time when the engines are turned on
this is just an example from aviation practice
and physically it means it's just considered there
what is a body for example in the form of an airplane mass of the body

he couldn't rise at altitude when the engine was turned on
he was rising

i.e. it turns out that here arises
the work factor is such that there is a body standardization
i.e. the body is always in the norm

and it turns out that since the body is always in the norm
then we are talking about managing external events
in relation to the body

i.e. the body is located
as if in the status of an absolute level of the Norm
it can always be there in normal condition
at every moment
all external events are concentrated
due to knowledge development there, etc.

for example, there is knowledge about the general resurrection
this knowledge allows God to make a level
that everything is recoverable
and this level begins to be proven in management, etc.

i.e. it turns out that here it is in systematic work
with the level of systemic knowledge

and that's when we start to see
the level of such an approach to the physical body
then you get a control point for all events
there in the future there past present etc.

so there is a Norm of the physical body
where control is an external variable
going
to the physical body
To the soul of man
to the Spirit

as an element of all aggregate external information

all aggregate external information
for God
makes His Body Eternal, etc.

so it turns out that if it is so
then we are dealing with that
what is the control system of the future
in general, all the information
future there past current time
it is seen more as an element of the future

i.e. the person begins to act
from the point of view of the development of future processes

it is located among other things
as a system of local impulses
in the information space
which contains the control
so that all the events that came to a person
would make its events creative and positive
there he was healthy, happy, etc.

and under any combination of events
so that a person can live forever
i.e. it must have
normal physical healthy body
happy events of life

and then you get precise control of events
this is your personal impulse your personal technology
as if translation of information
into a multi-angle environment

i.e. the ability is precisely in the Spiritual impulse
maybe not in a single impulse but in a Spiritual impulse
make management
so that this is the whole point system
led to the norm practically
physical body of a person

when do you start doing this
you see that the main level is
this is your Spiritual action

i.e. correctly formed

actually formed Spiritual action
at a certain position of the Soul, so to speak

and this is often enough to ensure
truly the Eternal Body
there not only you to any other person
Well, who wants to accept it naturally?
two more aspects
in general, it is necessary to effectively disseminate knowledge
about Eternal development
so that a person would accept it, so that he would at least agree

and when you start working at that level
it is the actions of the Soul of the Spirit of Consciousness
it turns out that in a natural state
i.e. well, working at basically any job

but having a technologically mastered state
let's say that a mathematician can master some formulas
but at the same time doing whatever you want there
he also mastered the formulas
knows that there are Laws of Connection
some kind of knowledge for example

like any other specialty yes
having a certain level of internal knowledge
Means Well of course they are oriented towards
better orientation towards the structure of Eternal development
a person can calmly form exactly this
this status of Eternity is the status of indestructibility

then it turns out that his control system
the main one so to speak yes his control of future events
this is his personal fortune
as if correctly conditioned
it turns out to be more ideologically justified

i.e. precise ideology
this is the exact there happy Infinite Eternal future

and here is a technologically expressed ideology

when combined with all the criteria
technologies so to speak
it does just that
there really is such a stable result
which works by the way

[...] Anyway
Well, maybe with some nuances
but precisely along the ideological contour
it always works

and that's why I think that the ability to achieve technologically
expressed ideology
i.e. to keep focused and precise
as if there was this impulse in myself
Well, by the way, it looks like a silver color
it is precisely the impulse as if it were light

and if the concentration of this light
where exactly the ideology is contained
i.e. the need to achieve
the need to realize Eternal Life
if there is technology, of course
he just provides you not only there
but also to everyone else
this information

i.e. this is that level
when radiation appears there it is real
as if it were scary and always [...]
remove the disease there naturally cure
there you have to spend some time, etc.

and here is the formation of this ideological niche
this is already your task
this is to keep this concentration
at the logical level of course it is possible
but the easiest way is to pass on this knowledge
on the level of knowledge there

then we get an ideology that also has
dynamic forms
not only static but also dynamic

here is the connection of these systems
and to restore there the real Eternal development
not only to you but to any other person

here from the point of view of control systems
I think this is the main thing

and with such a single impulse of control
which, moreover, unites

different exactly well there is the future and for example the current time

and based on this, this is precisely the ideological status
which supports virtually all elements
here is the action on all levels

This is what I consider to be the main governing criterion
well, just personal freedom
i.e. freedom that is not in conflict there
which is actually engaged in technology

and just so free
she lives quite happily
and simply ideological concentration
holds as the main control system

This is where I end today's seminar.

Thank you very much for your attention
