

GRIGORY GRABOVOY
The Teaching about God
Managing long - range tasks
05.08.2005

Hello again
the topic of my seminar today
This is my Teaching about God
Managing ultra-long-range tasks

in this term I show
how very distant tasks of the future
or for example distant spatial geometric
in general there is a concept of "remote tasks"
and there is also the concept of "ultra-long"

i.e. the distance is greater than at the level
the first impulse in Perception

what is meant is that when you consider
information area
then you can perceive some task
like for example very distant

but there may be another task after it

in this case we are talking about that
that this management
should be just as effective
how to manage the current level of tasks

because for God
tasks are very remote
or there are current ones
it's basically the same level of management

so here you need to be able to
make long-range tasks objectively the same
such as current time tasks
and to invest some level of, for example, intelligent control
i.e. to understand the tasks deeply
absolutely clear and absolutely unambiguous

and in connection with this it turns out that in this management
It is important to highlight

first task pulse segment
i.e. where the task is manifested

in the form of a contour
in the form of some matter
in the form of information

i.e. to be able to derive this problem
to the current level of management
it turns out that firstly the advantage is that
what does it mean intermediate tasks are solved

and when we work
on tasks remote in time, for example Yes
into the future into the distant future

Apparently people often encounter this
that occurs periodically
it feels like they're working
with very distant goals for their future

and this level of management is like this
what needs to be understood there is absolutely clear
what happens in the future

here is the understanding
it has a certain unique level
so if you know exactly, it means accurate prognosis
with a large number of events
it turns out that this is well enough maybe
to the person who starts working
difficult or maybe even unusual
for example, consider the tasks of the distant future

therefore in this case the concept of "accuracy"
this is a certain level of Perception
which is located
in the physical body of a person
in the Spirit of man
in the Soul of a person

i.e. the level of location
Well as if a signal corresponding to this information

if for example the task is extremely long
this is the level of a specific point of Perception
then we can talk

that at a certain level of Perception
task which means Well seems to correspond
this level
the task is very far away

or this is a task far away in space
just geographically far away

This is where it is very important to consider
the concept of a classification of tasks
what is related to the concept of "ultra-long-range control" so to speak
or is it in time

the concept of "in time" in management
this is the vertical level

i.e. when a person looks at
time lapse
he must actually from a certain point
where he begins to consider the problem
rise higher
or as if further from the physical body

here in the structure of Infinite development
ultra-long-range task system
this is the task of managing, as it were, a super-distant Reality
where a person is present all the time

i.e. this is also a special task in general
and it exists naturally as a task
usual level of management, so to speak

because when a person is in Infinity
at some point
so it goes away naturally
intermediate control systems

and in the Infinite Environment
The infinite element is like this
that there are elements of influence
on the current system of action

it is very pronounced here
element such as how God acts
for example, He acts at some point
still has the Infinite aspect of Action

from this point

i.e. God's point of Action is always like this
that there is some kind of aftereffect contour
Well, after all, any Action He has is Infinite
so it turns out that it can be acted on at any point
He always has some kind of Infinite level , so to speak.

it looks literally like a geometric level
which in the form of certain information of matter
always hits the same spot

and it turns out that in the super-long-range task
there is always some level
which is present here
absolutely clear, defined and understandable

in the human consciousness

hence the allocation of this level
This is a very accurate prognostic system by the way
for example in the treatment of diseases

i.e. to know clearly
at what point to make precise control
so that the disease can be cured faster
this is a very powerful level of healing acceleration

and in the structure of the action for example
when we do the management of resurrection of people
then it turns out that this is an action that allows
in any case, at any distance from any time
make a resurrection

i.e. this is just an approximation
aspects of the general resurrection
i.e. general recovery of information
in a more general management context

i.e. if we consider the resurrection
precisely resurrection
as a private level of governance that concerns only people

then in the aspect of general restoration
creative information
here we are talking about the fact that we have an aspect of approximation

any remote systems
to the level of direct disposable
of the same type of action

for example, as God did and does
He is in one impulse
made any control including super long range

i.e. we are just getting closer
to these Actions of God
and in general we even get closer, it turns out logically

considering that everything is contained in one impulse
and indeed it is so
that's how it is with God

in a person
within the impulse there is a solution to personal problems

this is the Action of God and man
Well, we can correlate it there, let's say yes with each other
so these actions
and these individuals, so to speak

that which is both particular and universal with God
in the context of there super-fast Action
it is often one point of control

in a person
personal action
creation of a personal level of management
decision making structure
This primarily concerns the individual

i.e. a person to make a decision
must make a choice
which is in the system of existing information
originally created by God yes

i.e. there is some division
in the structure of the acceptance of the primary impulse
but with ultra-long-range control
this is the concept of "depth of the human Soul"

yes deep in the soul
a person is always there
in the same starting position

i.e. it turns out that this task of unification
unification of action
the Soul takes on itself in this context

to be like God
He simply acts deeper in his Soul.

although it is clear that God acts super deeply
because His Soul exists everywhere
but in this case, due to the depth of the Soul's action

and the Soul is universal
so in general even the category in management means

then the person acts similarly
i.e. he practically carries out the action
well, just like how God works
it works immediately

it turns out that for a person
this action is original
from one point
for example from the super-distant level of the Soul
for a person

i.e. the person thinks
that the deeper he goes into the Soul
the more accurate its original action
i.e. close to himself

he finds an approach
to your personality structure

this is where it is determined
very important control element
on today's seminar
that a person finds himself deeper
in the structure of the depth of the Soul

4
and that's when we ask the question
then who does he find
Human

well him himself yes
and who is he then in his Perception

i.e. he is considering
your own personality
he must then fully realize his personality
to understand where the control contour of personality is yes
Personal information
interacts with the depth of the Soul

for example, there is some kind of point in the depths of the Soul
and the depth of the Soul
what generally defines or characterizes
that the deeper a person dives into his own Soul
the result is generally greater speed, firstly
dive speed

i.e. it starts working already
not even at the level of words
and the words begin to transform

into the structure of sound- verbal vibrations
here in Perception

hearing becomes hearing more than the Soul
i.e. the connection of the Soul is taking place
and known personality characteristics

i.e. a person begins to manifest himself as an individual
Well For example there in physical Reality in greater fullness yes

i.e. it becomes more refined
control systems there for movement, etc.
and at the same time he begins to differentiate himself more

i.e. the deeper a person dives into his own Soul
the more clearly the personality is defined
for a person

and it turns out that if we set a task
well, a clear definition of a person's personality
how does he perceive himself in general
i.e. who is he in the information system
Human
how does he even act personally
not even another

often the definition of another person
there is a principle well as if untouchability
there are certain personal actions of another person

and the task is not ^{so} obvious
he can help another person
but at the expense of the depth of your Soul

and there are categories that, ^{for example,} cannot be penetrated
on some moral aspects

well, as in any information
there is a private personal
if it is not related to Salvation
then this is ^{generally} confidential information
another person

it works with another person
Quite often just
can you make help management
and that's all
it is not necessary to infiltrate there
into the structure of his personal development

well, ^{if} it is needed there for Salvation
then ^{for example} add some control
and even then with that person's permission

i.e. another person in this control system
just like God works
It gives complete freedom
i.e. greater freedom of action
reveals the actions of another person

and you can learn through his freedom
what is he capable of
giving him complete freedom
of course, it is the creative type after all

i.e. you are still doing creative type management
that's why you give him a path of development that is precisely creative
that's what God does from the beginning

and in the structure of development according to your Soul
interaction ^{as if} super long-range control ^{yes}
development into the depths of one's own Soul
and the simultaneous identification of a ^{certain} person
in interaction with elements of the external world

this is an element that is quite simple by the way

because the personality is always identified
i.e. a person always understands
who is he
at the level of action

I mean here more of a technological technique
i.e. what does this understanding give to a person
for management
here he understands that he is a person of a certain type

and we are not talking about any personality characteristics ^{there}
we are talking about how knowledge is realized
this person

after all, to a greater extent, ^{what} is being studied here is
mechanism of human possibility
to know some system
and be able to solve it

i.e. there aren't even any good ones ^{there}
or ^{there are} other personality characteristics
are being studied
and the ability to perform an action ^{yes}

i.e. in fact we have come to the conclusion that

what is ultra long range control
in relation to the Soul
this is an opportunity in the making
to appreciate and or even really realize understand

what will happen as a result of the action
for the action to be carried out first
and secondly, it would be implemented correctly
just at the right time

i.e. in fact, this is again a control structure
but it is related to that
what before the decision
we are reaching the level of decision making
^{sort of} calculating the situation
we put together some kind of intellectual ^{so to speak}
or information-prolonging resource

because there is information
it can be responded to
and in principle, ^{well,} this is ^{like} a control action, ^{yes}

based on your reagent system
ability to know
from the point of view of, for example, controlling clairvoyance

and there is more
and as if a kind of unique intellectual resource
which in verbal expression
it is not often described by such a word
can be described there in sound
in discrete-sound form
as a system of relationships
personality and external environment
Sveta
and a person

i.e. as if a control system
where is the intellectual level of control
i.e. what is called intelligence
or is there a system of thinking and a person

what he is forced to think about
Well how to focus on the level maybe
sound-verbal forms

where is the beginning of the sound action
means universal action
and the whole word is a local system

i.e. we can start saying the word
there is the first letter yes

and then the whole area is designated
but the word is not defined
but you see the area of what you want to say

as soon as you say the word
then you localize the system within the region

the same thing happens as the created word
this is the localization of the system
in the center
the word is the control center yes in this case

and if we, for example, system this task

i.e. we take external control
we begin to pronounce the word

For example Well, you need to concentrate, right?
we can take this word too
use on the level there hissing sound
first there or C or CO use yes CO
this is already C together with the letter O yes together

i.e. WITH someone WITH-to concentrate yes For example
and it turns out that we can use
Well, basically you can use any word like that
apply in management

what are the first sounds of a word where the word is not indicated
means Macroregion
and the whole word already means the center of this area

and so we built it up at the verbal level, as it were
well, some kind of model solution
that first there is a primary form
which is not manifested yes

then the next one
i.e. the following specific form
specific already expressed

as God did
It turns out he said the word later

i.e. the specific form is further along
by distance

i.e. the further we develop, the more accurate the information becomes
well, some kind of paradoxical system in management

nevertheless, it turns out that
from a logical point of view, this is also true
to make the process more sustainable
remote processes need to be known more precisely

and it turns out
that is the area that is near the person
brought closer to the concept of "current time"
the area that is controlled can be
some kind of super-fast impulses
and which in fact often does not require

additional resource in management

for example why does a person have it there
some physical space
he might be there, well, on some kind of something
automated level of perception
to be as if doing some business

because the outer space
fairly stable approximately
it doesn't require well as if an additional resource yes

this resource is embedded in the physical body of a person, for example

but the further you go, the more concentration of the mind is required
there is no effort of will, etc.

and it turns out that we need this in this task
be able to control remotely
in projection onto the physical body, for example
make it just as easy and simple to manage there
as well as managing any current task there

i.e. to make the field of management the future
as if a more rarefied region

i.e. the density of information there
the further a person looks
it kind of becomes denser
more number of events
in one element of light is located it turns out like this

and we need to do it like this
so that the number of events
Well, maybe even let there be more
but the controllability of this system was the same

and it turns out that for example there
when treating complex diseases here
here is this step by step level
i.e. initial-level actions
where something was achieved in management
make the control more background level
more sparse

i.e., bring it into line with the background level, for example
this is still often an element of healing

because illness is a certain difference yes

and the background level is a normal level

and now you have made a vacuum

and the further area is denser

here we need to highlight that there is a problem there

to exclude the diagnosis

you need to select the right management

make it so that the future is concentrated

was background in terms of health

i.e. we introduce the health parameter and it turns out yes

we have to copy some matrix some glow

background i.e. normal control

for the future

in fact, the task is as follows

that we just current information current light

we transfer it in the form of a certain projection, that means

into the core of future events and that's it

i.e. we do a mechanical action

we then know exactly what we are doing right

if the actions are somehow complicated

a person is located maybe sometimes

in some difficult situations

then we highlight something that corresponds to the Norm

or even from past events

and this formal system

it just looks like some kind of needle , even

it reminds me of some kind of cone

with a very thin ending

and this is the development of this line, so to speak ,

what we bring into the system of the future

this structure

if you observe the development of DNA

that's what happens there

transition to stereo form

occurs through a local burst of light impulse

the same contour of the same type

and it is obtained due to this contour
the following DNA structure appears there

and therefore we can
Well, it's not necessary to rely on DNA
if you look at how a tree grows
there is a process of photosynthesis
then the neighboring cell is about the same
it's just that the tree has a flatter version
there are like several parallel rays at first
then they move apart
and then comes the glow

and moreover, even a complex process
then the connection occurs
in the center of these rays

i.e. it turns out that the tree
the process of the future level of management is more complex
but a tree is also a less controllable system

so it turns out that the simpler we create
next event control impulse
the more controllable the system is

but logically it should be so
for God any control
it's a very simple design

and therefore He can control from any
well for any system
and any system

so therefore we must simplify access simply
to a system of a remote or super-remote level

and that's when we start to simplify
i.e. at each level of management we set simplification
then we achieve just precision
in terms of acceleration
or if there is, well, something there is possible
well in management
there let's assume some possible deterioration of the situation

here in this system it is very easy to set up analytics

i.e. there may actually be no deterioration
and there are logical versions
which exist in the collective Consciousness

i.e. in this process
what can a person have in general
there is some sort of overkill of options yes

and here are these options
start somewhere in the collective Consciousness
well, like some kind of meteor shower , let 's say
visually it looks like some specific lines
at the same time, not everything there is bad
there may be good events there

but some events begin to not seem to burden the system
i.e. it is clear that future events are possible somehow
here you have a line of development of your own path
and you start to get distracted, it's obvious
abstraction
also, in general, not a very desirable option
although there is nothing problematic there

and you start diagnosing the system
i.e. you begin to understand your own path

and that's when you see it
you are absolutely clearly at the level of Perception
first of all by the way by the body physical body
cellular even more pre-cellular variant
Well, sometimes cellular right away

you start to see specific events
the body sees your own future

and that's when you start to recognize
this control system
it turns out that the tasks are extremely long-range
i.e. very distant information
primarily perceived by the physical body

and therefore in the physical World for example
physical body
this is so as if the most stable control element

because almost everything is Infinite Future
projected and open to the physical body

from the point of view of local systems
which are visible in the form of specific actions

i.e. you can move on to body vision

and this is some kind of somewhat new management
in terms of what to consider
how does the body see at all
future

yes there is logic
there is for example there is a controlling clairvoyance
and here is just a body
cellular level material level
how does the physical body perceive

after all, we can even do it
for any other information
consider
as some segment of information
perceives any other

and in this case it is a systemic, routine task
consider
how does the body perceive

and by the way, the body is easier to know
we're already used to it

and it turns out that based on this
we often manifest body vision there
finding things here in the nearest contour
where there are open systems
there the impulse goes straight to the physical body
for example, you can determine the location point

here the controlling clairvoyance is introduced in this way
what is body vision
used as a single control
and then if necessary, something else is added

and so that you can look only with your body
need to concentrate

on a super long-range task
and receive impulses directly to the body

i.e. consciously take control of the physical body
and see that it was information, it was knowledge
not in the form of some rays
and the knowledge that is inside the physical body

this is how you enter
into the structure of cellular control
where the cell knows everything as if

Well, the cell contains all the information.
you just select a fragment of the future and that's it
in his own cage

and then it turns out you find the control very clearly
Do you understand what's going on there?
because here with the physical body
you perceive
what's going on there
the most organic system of Perception

where you don't actually look for other criteria
how to get information
the state of the physical body is enough for you
perceive
or perceive it as it is
and you get information
being in the normal Norm of Perception

and here I have brought it to that
as God does He
He is at any level, well, at a completely calm one
perceives
universal
one-time
there is a local one
ultra-long-range information

and this is what it is. This is the perception
where is the physical body
is located in the center of information perception

and when we know how to regulate
ultra-long-range information
then according to the Law of Connections
one system
on the other

so we can regulate
activity of the physical body

for this we can go out
as if under external control
Well like near the body, for example, even
but according to the information of the physical body
its next development

i.e. each next level is that place
where the physical body will be present

here in this management
It is important to allocate space
where the physical body will be present

Well, if it's not difficult to do by the way
just tune in to the fact that you are not anywhere
put the information
and where your physical body will be

this is a specific area, just like any other task
we set this task and got a solution

and having found this area
and with the Infinite development of the physical body
this same area also turns out to be super-long-range
She is Infinite
that means it's big at least
well it's like a big one to the Infinite level

the first level is perceived as big

what is infinity
something very big
in the first version of Perception

and then already at the logical phase
perceived as Infinity

i.e. if you ask yourself this question
how does the body perceive the Infinite Factor in general

this is some kind of really big huge quantity
on the first level

and then we perceive it logically

what is this B infinity

but the body perceives it as if in a sound-material form

i.e. the physical body perceives Infinity
as a structure that is projected
on a local, for example, cellular, value

after all, the body must perceive something
i.e. some system yes For example
in this case, for example, a cell

here you can clearly distinguish
what well for example on the Spiritual level
this is one level of Perception

there is another level of Soul

on some element of Consciousness
it could be
some dynamic level of Perception
the same size in different places

and for the physical body it turns out
this is a very specific value, a specific point
and to every element of the Infinite future development
in the physical body
corresponds to a very specific address
specific point

it means to collect your physical body
Well, actually, it doesn't collapse
but nevertheless at the management level
know for sure that you are there

you just need to configure the light control
so that all connection points are like this
that in the future your body exists
and you can for example there is even a principle of self-assembly
it there in the management

i.e. if you are looking into the future and you need
or look for yourself
you can take and collect yourself in the right future

so it works out
well, just like God does

He creates
any control system
any information

it turns out that for simplicity of action

can you please tell me this principle of self-assembly
put in the level of volume
so as not to search, for example , not to consider
how useful is this or that path there yes

and here you have highlighted for yourself
the desired path is some specific one
and the criterion of this path can be like this
that this is just a guess
Well, what is your position in management, anyway?

i.e. you can actually set a goal
just see yourself there in the Infinite Future
in some interval

make management by volume
mean there Well, are you getting yourself together ?
at the level of this Infinite Future
at some point

then it turns out that you are at the moment of assembly
must get well yourself
i.e. so that there are no modifications of the information there
i.e. you must perceive yourself exactly there

and this is the exact Perception of oneself
in the distant future
with signal transfer almost instantly
on myself there at the current time

it turns out that this is it
the main aspect of management in general
ultra-long-range tasks
for the task of instant systemic access

i.e. you get control
practically well as if of an instant type
looking at myself
in this super long distance

i.e. here it turns out that the task is

just take a look at yourself at least
not paying attention to events

and if you see yourself there
well, then control of the Norm or something of an event plan
it can be quite simple
in the sense that you are just on everything
look at some ordinary contours

i.e. well, the health norm is there
some of your personal actions
they are absolutely fine like, ordinary or something

and then you begin to understand
that overall everything is fine

and then you start to follow
well, the systems you know
the people you work with
that you are working on

or which should also be there
systematically and happily develop with you
for example, the whole civilization is there, etc.

i.e. some very specific systems
to the point that they read it in the news
some text in the future

looked straight at the newspaper
what newspaper can then be highlighted what kind of newspaper
you can at least just read the text
what is there for example the Norm of social events
some favorable event

i.e. the ability to distinguish the future from this fragment
some specific element
and then determine instantly
be able to diagnose
your attitude
well, as usual, you read a newspaper or some text

from experience, well, the very option of Perception of information
speaks about your well as if in general condition yes

and it turns out that if you mean you got it
impulse of the same state when reading a newspaper

then everything is fine

i.e. the diagnostic system must be
short, clear and understandable yes
so that's where it all comes down
in diagnostics of your condition
and not in the diagnostics of the event system
at least in the beginning

because at the initial level
it turns out that well, that 's enough in general

what are you currently for example
have some kind of management norm

For example well, if you are treating a disease there
other people there many other people
or you solve the problem of , well , Macro-rescue
there is the Salvation of the whole World

then current tasks exist simply as current tasks
they are understandable to you

i.e. since you are involved in management

then some kind of Norm must be clear
which is now generally classified
with the same signs

i.e. Norm of events
Health norm
management tasks and everything
there is nothing unusual there in principle

and here is the criterion for selecting these values
in the future
this should sound familiar as i said
here's a sign, it's just literally reading newspapers
some headlines are positive

and of course we need to pull them out
on a positive motive for you naturally
depending on what you know about yourself

and when do you start
for example, to make this type of control
then it's exactly like intermediate management , yes

management , so to speak, through the Spiritual aspect
through the aspect of action of the Soul

here it turns out like this
what are you starting to see
the structure of a kind of Infinite Eternal development
Thus
what do you see
how the Soul and Spirit of man
there is some element of human Consciousness
developed into Infinity
they organize for you
physical Reality actually

those. how is your soul
organizes physical Reality
Thus
so that what is organized by the Soul
crossed over
into an approximate version of physical Reality

i.e. the Soul is an Infinite system
but the Spirit too

it turns out that in this case we
in the control
there in Perception
we actually have in general

well, also super long-range control for
for the physical body
this also turns out to be an extremely long-range value, among other things
at least by definition there

and then it turns out that if we
we begin to transfer control to ourselves
i.e. to the level of the physical body
then we must set the task again

from the intersection in the management of ultra-long-range systems
get the closest element
i.e. the physical body yes

the closest question then
where and to what
well, i.e. to consider that the concept "in information" yes

the concept of "personality" is as follows
that the physical body with the development of time
comes
to some information systems
which concern the physical body
but they are reproduced for example by action
Spirit
Souls of man

and when you start to see these elements of connection
i.e. long-range control communication
and literally the current state of the physical body there
the next state of the physical body
even in the farthest reaches

then you get practically a tool
which allows you

to do some kind of universal action

that any super-long-range information is useful
for example for your whole personality
there for the physical body
Spirit
Souls
Consciousness

from the point of view of for example there it is useful there Eternal development
or some private tasks
you can , well , still, also within the framework of Eternal development
it works out to get here
that practically so to speak level
or something necessary for development over time

i.e. you need to make development
into some element of future events
and at the same time you don't need it there For example
there at some time
so that in the future
events of some kind occurred

then it turns out that this is precisely the management
ultra-long-range
allows integration
your personal action in this way
what you get is some kind of synthesis
or a conglomerate of such different systems

where they are manifested

firstly on the Eternal magnitude
secondly, they are dynamically crossed
and thirdly, there is ultra-long-range control
after all, it is such an element
that it includes all the elements of the entire surrounding world

in the super-long-range element
the entire outside world is included

you can say
what if all the information in the world
is being considered
as information well let's say it's kind of complex
within the framework of the individual's action
then this complex information
is also contained in the super long-range control

because all the elements of the World

we can assume that they are quite remote
except for those closest to them
and attribute this to the area of ultra-long-range control

and within the framework of the postulates there
any interacting systems
with some distant system
they still interact the same way

the ultra-long-range system interacts with the entire world

and it turns out that the management of the whole world is the whole
environment
This is a system of very fast signals
between the ultra-far region
and you

i.e. you just need to track the accuracy of the signal
which comes from you
to you for example in the information of the future
or some kind of removal of the super-distant region

and back

that's when the signal is the same
i.e. you perceive the signal from yourself

i.e. everything is fine in this world
The world is governed by the level of your tasks
creative of course

and you get control
just because you have time for yourself
self-diagnose correctly

Well, basically God does the same thing
He often doesn't do anything special.
but simply looks at Himself
and gains precision in control

but any of His Actions
characterizes well in full, in full so to speak
Himself

so here He has the same mechanism
the only thing he considers more
Action Element

a person can consider
element of finding Him in that information

here it is again
what about the person's information
as if it passes or touches the information of God's Action
originally created information

God created all information by Him

and it turns out that here again there is a certain difference
which is in super long-range control
starts to be minimized here

because the intersection with the ultra-far region
speaks about that
that the next area can go
as if from an external control system
from some super-distant Infinite magnitude

and it turns out that we have a layer of control
which was not generally reproduced
there by human action
as if external control enters into the system of his actions

it turns out that then this is it
Well, it reminds me of what God does.
but with God, again, only He enters this information

a person has this infinite quantity
means his personal initiative

i.e. man approaches the Action of God
when he is more proactive so to speak
here he is approaching the Action of God very quickly
when he is there for example there is maximum initiative
in the task for example there is Eternal development

then it turns out
that he begins to do management in this way
that it was his personal initiative
this is an understanding of what is happening there
in some super-distant magnitude

and this understanding can be that
that he understands this World in principle somehow
i.e. he simply perceives a certain system
knowledge of the world
and not even the specific element itself
in the end

and that's when he realizes himself in the World

Well as if informational
physical
he begins to perceive
some elements of information
in the form of actions
in the form of some points of knowledge
earlier knowledge
or there is the following knowledge

and here is a point
where is past and future knowledge
are crossed at all
and mean only one value

a person looks and sees this
as a certain quantity that is located
beyond the concept of "past" and beyond the concept of "future"

on the one hand, this value is known

but on the other hand, he doesn't differentiate it very well
but it can be related to some understandable event

but as we approach this event
the value is being disbanded

for example, how God built a positive type of World yes

He built the world like this
that He built Him in Action
i.e. He didn't have to bring it to the control object
All he had to do was take action.
and a positive system was created

but that's where people might have some problems
there's still something going on there
a certain diminution in human perception

i.e. the person does not perceive
Well as if if he doesn't want to, he doesn't perceive
more here is the element when he doesn't want
Well, what could he possibly not know? He doesn't know, yes. For example
that there is such a system of its development

if he knows
then, as at the level of general information
he still knows this information somewhere
he knows but doesn't want to

then it turns out that here is an element of development

it is precisely the element of returning information
from the ultra-long-range region
to a person

and he means well For example there does not want this information
perceive
then the question arises
let's assume there is no education related to that
that he must choose for himself
for example, the element of Eternal development
due to the transformation of the ultra-long range

and get from this element
well, some kind of personal experience
who would talk about that
what to do anyway, for example there is a system of Eternal development

it is useful, necessary, etc.

i.e. as if an element of some kind of training
or there decision making
here is based on that
that a person actually receives information in general
due to some precise well sometimes they are like
look like super long-range tasks

i.e. he makes a decision
because the tasks are distant
he has stable solutions
when it reacts to some system

i.e. the principle of fairness of the system's operation
is that
what if the block of this information
corresponding to the management system
insert between his distant future
and them in the current tense
then this block must be stable
i.e. he must be saturated with the light of life there management

and to do this control is quite simple
take any area of your own information
bring out the system
between a very remote area
and for example there you
located in the current time
in the physical body
in some place
and see how the saturation is going

and here is the variation of this saturation
to the level of maximum saturation with information
from the most distant area of your development
this is a path that is built as an intermediate path
in this Infinite development

i.e. on the one hand you get
positive level indicating that
is this control segment accurate
is it configured and built correctly
if it is properly saturated with information
becomes dense, stable, etc.
in light control

and on the other hand
it is building your own path
in a step-by-step version

ultra-long range control

shines in your direction
without even seeing the light
but in the form of unfolding events

and then you put your system of Consciousness
Is your Consciousness prepared to resolve events?
select some events from the sample

and on the other hand, since you are often forced to decide
Well, definitely information, like any other information
then the sample is as follows
that you have a logical management goal
and you just choose the structure of the solution, then

and this is the sample of the solution structure that we get
this is basically the main action that needs to be taken

i.e. you need to be able to decipher
from the level of the event denouement
where all systems begin to come together
which characterize the events

well, like in DNA for example
which is organized at the information level
can be anywhere
but it is located in a specific place
in the physical body

the cell is in a specific location

and now events can disband
i.e. to start to untie as if at one point yes
but must be in some one physical place

and here it is
this physical place is the easiest option
location
this is the super-long-range same area of information

i.e. it is defined by the fact that it is very far removed

and in principle it doesn't matter where it is
it still means somewhere
which is called super long range

and when do we start
reverse control do
i.e. how is this a connection of events
where does it begin
and obtain control technology from it

it turns out that where the events are
to be starting to come untied
by elemental systems
where are the versions built from ?

i.e. here is the World of the Future
where do future options come from anyway?

on the one hand, a person can simply choose
and do something
but on the other hand, one can consider
like a mechanical version
that somewhere elements of the future are emerging
in the form of some initial phases ^{yes}
initial type designs
or there are beginnings ^{there} are words of the beginning of the action

and then you can go further along this level
and the action instantly crystallizes
and is designed according to your path
or not

i.e. the entire external world
it turns out to be an instant assembly system
depending on your path

except for man this concerns everything
a person always exists anyway

here you can see it very clearly
that man is originally Eternal

but the entire outer world is an instant assembly
around your world
converted to the ultra-long level
but already from you

i.e. if you look from yourself
it turns out that the outer world is crystallizing
i.e. there, in principle, it even looks like information
as a flash crystallization system

and then the design of the external system of the World

i.e. the World as a system of your Perception
as your Thinking system
which is what happens with God

His Thinking is the external World yes

and it turns out that when you enter into compliance
or something like a system of Thinking
with the outside world

Well For example there is some specific point there
in physical Reality
it is forbidden
a person, for example, cannot say for sure
that just because he's looking
this piece exists all the time

a person believes that this exists
a piece of that street there or some cafe
because it just objectively exists , yes

i.e. in the collective Consciousness
it is really defined there
by the will of all people
all information objects

but so that the external world would crystallize
and acquired the properties of controllability from a person
at the moment of viewing some element of Reality

he should be like this
that human consciousness should highlight
autonomy of this element

i.e. here is the element of Perception
it is based on something
is supported by something
and this element must be controlled

i.e. the ability to separate the key phases of an event
where they start to grow as if to creep
it means at the level of literally being there
at some point
at a geometric point there in space
precisely at the management level

and connection to this level
leads to controllability of the system

well, i.e. you want to go to this cafe
connected, got the necessary coffee , etc.

and when you kind of start looking
and these are autonomous units
when events unfold

after all, what's the point of not getting coffee like this?
and get fundamental knowledge about that
how do events even begin
as if it becomes ambiguous
those. multi-choice yes

i.e. a person has the right to choose any solution
maybe go to a cafe maybe not go then

and here the question of interaction arises
human
with external system

i.e. with an infinite number of external options
the person turns out to be absolutely clear
he always chooses himself
logical yes indeed level

a man does something and he does it only once

and then where does this specificity of decision making come from?
with complete freedom of action

then you need to look at God
how did he even make the world
there at one time
and at the same time, each of His actions is unambiguous

but after all, all of God's Actions are His Actions

so whatever He does
Any action is unambiguous

for a person the easiest option
realize
all elements of the World
and through this awareness make your actions
Well, it 's just the Macrosaving system

perform the Macrosave action
then your private action
will be completely unambiguous
how would you align it with that
as God does
Your own management

and then it turns out that you already achieve
this very distant region
it's quite simple there mobile
and in general you see clearly
that you control distant future events there

well, insofar as you want to deal with them
maybe you don't have time there
or you don't want to go into detail there
but nevertheless you have a tool
you can achieve this

pay attention to this
make management
and achieve this control
and in fact then it will already be possible to decide
any control system as absolutely stable

because if you see
some problem task
and the tool for solving the problem is located

Well for example, you need a lot of time, but it would seem
to master this system

you take this design well
which you call "a lot of time" there
lots of time for learning
make it a long-term goal
and take control over this structure

then you don't need much time
you control this system in a single impulse

then you take it and go
into your management system
through this block simply

long-range task block
and make the current level management
but it's not difficult anymore and you don't have to study for long

so you often by the way
if a person needs to quickly get healthy
or make control ^{there}
which requires, ^{for example,} such a position
that it is necessary to take ^{some} actions ^{there}
learn something ^{there, etc.}

this is just a very simple option
everything complex is taken out into the super-long-range task
external control is taken
over this ^{seemingly} complex area

and here as a ready-made solution
output the control pulse
and achieve everything at once
don't complicate the situation

This is where I end today's seminar

try to practice more intensively
according to this control system

Thank you very much for your attention
