

GRIGORY GRABOVOY
The doctrine of politics
Predictive management methods
05.12.2005

Hello again
the topic of my seminar today
This is my Teaching on politics
Predictive management methods

and according to the tasks of the political party DRUGG
I show management by specific methods
which allow
predictively implement management

i.e. in this case we are talking about
that you are actually setting up the controls in this way
that you see the structure of future events
from the point of view of visualization of specific events

and in this case it is necessary to consider
the following control system
what do you need besides visualization
simultaneously introduce correction

therefore in these methods
it is necessary to consider it all the same
optical expression to a greater extent in the first place

if the optical expression
some level of management should be postponed
then comes the direct management methodology
specifically related to detailing
in general, let 's say, what is written in the method

for example, let's assume that this is the management of the digital series
color management
sound control
form management
or word control

therefore it is necessary to consider here
the entire spectrum of control is divided into two levels
the first is at the moment of applying the method
you try to see the event and influence it

by interaction of optical systems
i.e. the level of direct vision
and secondly, if you think that this should not be done
or does it take time
then just use a digital series for example

the row itself or, for example, the color, etc.
these are the systems that lead
to the implementation of management immediately

so if for example there is control there
I said "and so on"
for example there is sound, form and word
then it turns out that here
at the time of application of the technology
management takes place from the point of view of standardization

and in this regard it is necessary to note here
that since these methods should be very easy to understand
you also need to be able to explain them quite simply
there the following members of the party DRUGG for example
generally speaking, to everyone who wants to use it
precisely the predictive-controlled level of action, so to speak

therefore the method of control with the help of numbers
he's next

on the left side of the left shoulder
into Infinity before you
you put a digital row that moves slowly
away from you
well, it's like they're pulling him by a thread from you
and the numbers are as follows
this is 1 2 7 9 3 1 here such a sunny light appears

then 9 1 7 and brought to a silver color
recorded the situation
i.e. the row has been thrown away from you
from the left shoulder and fixed
at the Endless Point
number 1

i.e. in fact it looks like this
here is 1
and everything moves there
towards the horizon let's say in management

In this technology, it will be indicated to a greater extent
management horizon towards the future
i.e. in front of you

then place a row on the right side
from the right shoulder side

at this point the movement begins
from the point where you recorded the number 1
at the Endless Point
and at the same time from the right shoulder

It is necessary to keep in mind that there is a convergence of series
i.e. one row that starts moving
from the point of number 1
and the second one moves as if towards the first row
i.e. two identical rows in fact

next row
9 7 2 8
here you need to catch them moving
towards each other
then the series continued
9 7 1 7 here the circuit is closed
at 7 they converged at one point
two identical rows

and then this is how the end of the row turns out
he got to the beginning and there was 7 at the end

and that's how we got it
Well, the option that is similar to the "eight"
We have basically closed the sphere of management

recorded
now we can in the control context
see
that future events are generally already balanced
by this action

Here we have balanced with two rows
It should be taken into account that this series is applied
it is more aimed
to implement the program of the DRUGG party

but since the program is universal to all mankind as a whole
then you can in this substructure

highlight
your own management system
i.e. a private system

for example there is Eternal development Eternal life
but in a particular case you can see

your personal structure
what to do there and in the substructure

so this is an applied aspect
here you still need to remember to periodically recall
what we are talking about in this case
on the implementation of the DRUGG party program
This is a purely political action in general, yes

so here within the framework of politics
we are simply talking about Eternal Life

and here is the Teaching in the field of politics
has the property of detailing
property, so to speak, of fairly strict forms
on information
and localization
i.e. they are, in principle, so to speak, under control
in one local place

even if in the area of Thinking
this is also a local specific place

the political area is often very clearly delineated
control loops
not like there is just general control

For example, you can do one task
at the level of fundamental Laws in a general sense
and can it be done at the level
substructures of subtasks of the political program

basically the result is the same
the only difference is that in the political program
a specific group of people is involved and is expanding
and they are specifically written in the form of words
these tasks

so check it out periodically
to the program

at least at the information level

if they somewhere software systems are expanded
then it turns out desirable
thus do management
to watch
where help is needed at the software level

and visualization
so you made two control levels
i.e. in fact we are talking about
that you find yourself for a while
at the level of the element of Consciousness
in the structure of future events

be careful here
look at the point of as if fixing events
and work at that time from the present time
i.e. you need to work from the present all the time

i.e. work with the future element of Consciousness is as follows
that you periodically fixate on the current time

Well, it's very easy to fixate in the current time
you just need to pay attention to everything
on external information around a person

for example, there is such a principle
as a definition of the flow of time ^{yes}
i.e. what does time mean in information now
pay attention to this
and lock in control
that's all

i.e. you can do basic techniques
look at the time on the clock there
translate into universal number series
and the universal numerical series of the current time
he's next

and it is placed vertically
if you look at it in two ways
you can go from bottom to top
you can go from top to bottom
but in most cases
it is placed from top to bottom
near the left shoulder mainly

if it's on the right then it's placed further
geometrically further from the body
the row is the same
fixing the current time

1 9 7 9 8 9 4 1

the series is actually approximated
is replaced by three numbers
numbers

1 9 7

which are placed vertically near the body
just mentally

i.e. it is a fixation of the current time
because to look for time in space
if a good intermediate opportunity
easier yes

you find yourself in the information of the current time
working with information of the future
This is also a mechanistic transition
at the current time

because if you stay for a long time
in the structure of future events management
it turns out that the events of the current time
as if time passes faster

i.e. there is a reduction in the spectrum of the current
you seem to be carried at high speed into the current time

so it might be, well , for example, uncomfortable there
although this may be an acquired taste of course
how does Perception work

but still you always need to be there
I count in the current tense
as the main number of people
located at the collective level of management

because if they learn to move quickly already
in the systems, well , for example , there
some amount of several millions
then billions of people
can already work simultaneously yes
well, according to [...] the system, for example , there is the current future
then it's easier then there is no need to make changes

while the majority of people

more responsive to the current time
accordingly we must maintain control
in the current tense

that is, the task is to keep at the current time level
this is a special task
as a rule, this is leveled out literally in a millisecond

i.e. you do the management for a short time
and you find yourself already in control in the current time

and from here it is necessary
although it is possible from the future tense
but better from the current time
already watching events

i.e. they built two rows
fixed the point
here the optics have opened up before you
and this optics means specific events

try to understand them by their contours, study them
select on visualization
i.e. if you meet a person in front of you
then you must understand accordingly

so who and facial features biography if needed
for example, if he poses some kind of problem to society
cause and effect relationships
his future his past etc.

i.e. to look
why did this person get in your way
in the information of the future

and by the way, to close the information
let's say a day ahead
here in this control system
you need to use the next row
which allows you to detect time
when the event will occur under the necessary conditions

but considering that the event is necessary
so that it would be more desirable
as if evenly distributed throughout the day
because then it's easier to manage yes
if suddenly the system is negative

that's what you need to keep in mind here
that event detection should be like this

if if you tied to time
event
after all, you act more as a manager
precisely the one creating information

as God does
He initially creates the event at that time.
therefore, it is definitely not necessary to think that everything is strict
it will be restrictive well as if the framework of management

that's why we think that attachment to events
let's assume per day
but we fix the time that is most convenient for us
i.e. we move the event if necessary

and here it turns out that the level of management is the following
so that the row would mean
and detection and for example meant a day
we are at the point which is
point well so to speak, the connections of the control rows
the first two
which have already entered the management sphere, as it were, in fact
i.e. there is a glow as if from a sphere

we should actually just do everything here
dictate the next row
going further from this point
and all this will take 24 hours

day means in digital form
following
1 9 7 7 7 9 8 1
the day has already ended
i.e. this is the next day [...]

and if we want to determine time
for example 9 and 7 are two numbers
lower above the level of the row
and just look at the clock
look at the dial to see what time it is

learn to look in profile
How to see the time on the dial

although well how else could it be
but we have a different meaning
It's better to see the time on the dial

if there is also a time detection method
through the Spiritual structure
The Spirit having Infinite control
always knows the time accurately

i.e. you don't need to detect the clock then
but you understand that this happens at some point
understanding happens instantly
it is already possible to go through a series of Spiritual scanning
and determine time intervals
where the event takes place

then you already enter the event substructure
and you begin to visually control images
being as if on top
you can be above the events
inside
at the cellular level anywhere

events as you have time are as follows
that you can manage as you wish
and if there is time
if your political goal is this
that you think the event should be implemented like this
and not for example, it could be different somehow

then it turns out that the connection is going even
at the level of control numbers
there is a connection of this type

if words
then there may be a connection at the level of verbal phases
to read suppose the word there and in the future
Well, let's assume from the newspaper
you need to know that a connection is taking place
at the level of sometimes replacing a word with one that sounds similar

because you perceive in translation into sound form
and transfer the thought to sound form
basically a certain level of sound transformation going on there

so it's better not to translate into sound

better watch
i.e. read as if not reading mentally
even you can read the newspaper
but you don't have to repeat the words in your mind

so in the future with digital systems
you just need to watch
because it comes at the expense of high speeds
it's like there's a sticking together
because the information of the future is multilayered
i.e. several versions of events fall on one point

so one letter well maybe like a compressed newspaper yes
it can be like a compressed newspaper
to straighten it out you don't have to repeat it

i.e. just look and go to her at the same speed
Here comes a ship, we need to keep up with it at the same speed
move nearby
to read
so that he doesn't go anywhere and doesn't displace the letter da
from Perception

Well, in principle, the principle here is very simple
quite affordable
it's clear why it will be like this in the future
time moves a little faster than it currently does
the future is always moving a little faster , yes
from the point of view of current time

that's why we have to make it there
at the level of action

the next method is color management
to control color
those. predictive control in color
where are you at the expense of color
in fact, for example, solving the problems of the political party DRUGG
for example, you make a structure of a private task there

there is a private event
the color needs to come from you
first task
you must understand what color suits you
this is the color coming from your image for example
from your Thinking

here is the color on one side you should at very high speed
put forward your management task from yourself

in this case, pay attention
that everything is set higher
on the structure of recognition of future events

and the task of management is, as it were, natural
i.e. you know her, remember her
your physical body understands what we are talking about

i.e. the control task comes from the physical body
what does it mean
what you thought out once management
no need to remember
the body has memory naturally
and this memory has a certain radiation

that's why we say
that we have more control over the situation ahead
rather than as if we were remembering the goal
the goal is you yourself
you are in the future actually
in realizing your future

so it turns out that you need
so that your own color and light
it has not changed from the point of view of a single task

so at a more distant
from the point of view of Eternal development
the color that comes from the Infinite Future
should be as it comes from the current time

pay attention here
color coming from intermediate action
he is not fundamental in principle
although it should be yours
track the glow area
what is your color
you must see yourself in the future

and you should see the connection then
for example there is a physical body
but for this you have to get closer somehow
in information
i.e. to obtain primary glow

that you are in this very place ^{yes}
for example in a geometric location

therefore it turns out
color and light coming from you
it's quite ^{like} it should be bright, fast, simple
and mean your natural state
i.e. free is better if the state is so natural
that there is a solution to the problem

remember when you ever had
was there a similar solution or was there just a question
and try to find this state at the level of logic of Thinking

well, enter into familiar states
because familiar states are the solution
after all, in principle, in the past you had this once for any task
then it is enough for you to actually hold this control

for example , there's a swimmer swimming with something in his hand
he squeezed and floated ^{yes}
Well, you are holding something in your hand in the form of a state
and you start moving in information

so the first level of color management
you start
having considered in the light image the tasks of the party DRUGG
for example, there is a program item there
in silver color
in the form of a kind of front of compressed color and light

So you are considering the silver color
you are already starting to solve your own problems
and this is usually at the first level of access
universal access principle
color into the future
this is purple color
sharply changing to blue and silver shades
specifically absolutely

i.e. to get into the future
just purple is enough
so that we can see that we are working
with information from the Infinite Control Factor
we need for [...] such bright sunlight
to shine on this purple

limited there

here is the front, for example , which is simply parallel to the body
it's a purple color that turns into white

glow is a horizontal color
this is the sun's glow

and sunlight touching
with violet phase
shows where your future event is happening
and the one that needs attention
perhaps even at super speed

i.e. it means that here we need to make control
you'll have enough there for the next twenty or thirty years
or do we need to shift now

It is important to understand exactly
what does each specific event mean
and here is this angle of flowers
entry into the future event
and then analytics from the future of past systems
allows you to take basically any information
from past events
any object of information
if the object is not creative
if the object threatens someone
you can extract any information from it
starting with detailing the causes and effects, etc., etc.
absolutely everything
up to the Thinking of parsing words and sounds
any thoughts he ever had about

therefore it is meant
that here we must definitely consider
this is the system that is actually reflected
in the future

i.e. we got into the object yes
I'm repeating myself again
just a plane of purple color
fading to silvery white
there is a glow from the Infinite phase as the beam is reflected
on the purple already more white plane

and this reflection means an event

next we go to the substructure
what is an event

for example, a person passes by on the sidewalk
why did we pay attention to it

in this case, drawing attention
this is action
we paid attention for some reason

and there is already more white color going on
we'll see what happens next
the whole spectrum of this face
i.e. it can be understood in the form of an instant
Well, as a photo, everything is clear

it is clear that with all the level of the following events
he will not pose any problems to you or anyone
Well, in this case there was some kind of task, possibly negative
she transformed and he went on to other things
you start to move on

as a rule, a person does not have many situations
there are fundamental ones, yes, maybe a few per day
but there is a very simple principle to calculate
how many times can you encounter a negative situation

Well let's assume from God's point of view yes
How many times should God have planned for Himself?

situations to overcome something
He is one Action means one yes
in the time interval then it should be
in principle, it is better to have some single Action

i.e. the more you extend the control interval
the easier it is to manage the situation
for a more prosperous and lasting future

and in color management this is very easy to achieve
those. remote option
there is a silver plane coming from you
then it must mean the duration of the event

in this case, to fix
duration of the event per day for example yes
it is necessary to make control of two flashes
where the sun gives bright light, i.e. rises, yes

although here we need to take a very long term approach
give a forecast in the color of two Infinities
the light is also infinite

and therefore here is the accumulation
i.e. focusing on the Infinite factor
this is a very good level of management here

i.e. each event is adjusted by the Infinite factor
i.e. we can immediately determine all the consequences
just like on the map

here is any movement of events
you can tell right away it's coming
how the ice breaks up and a strip immediately appears
well, like the movement of the crystal, yes
it's immediately clear what it leads to

and it has a negative structure
even the sound is unique
how ice cracks suppose Yes

and if that means the management structure is like this
that positive as a rule is just
without structure Auditory perception
just a distribution of light wave

so here we can clearly record
any branch of an event
from the point of view of Infinite development
here the Infinite is already deliberately laid down
light has an infinite structure
we don't need to drag something out in numbers, for example
into the additional management structure

Well, here I just crossed over already
to the method of control by sound

i.e. try to hear the structure like this
so that it is not heard, i.e. not distracting
that which has no sound
and there was a structure of informative sound

the concept of "hearing"
it is not heard as for example by physical hearing
and it should be done this way

so you can practically
perceive management in this way
what do you understand
what sound do you see and record

for example the distant future has some one sound
so there is a different sound in the near future
certain sound there for a day, let's assume
and the week is completely different

i.e. the sound phase is calculated as information
but why is it exactly sound

because if you consider
let's assume there is a verbal expression and some word
what is behind the word
the so-called "subtle sound" where did the word come from
sound form of a word
not in the form of a spoken word
and the original sound
sound as if the structure of the original event

here in the sound phase the main thing is in control
it is to maintain some kind of silence, i.e. calm
there are no sounds that indicate the need for action

or the sound of the same silence, for example
what it means is that it is necessary to react after all

and here the control happens as follows

you need to , for example, consider any melody
to recognize it not from the point of view of sound
and from the point of view of information

in this case, any given melody means
she has some kind of visual memory
even some structure of form

for example, some of the melodies have color and shape, yes
what are you considering
remember that you have well for example in memory
there is some melody
but you don't reproduce it at the sound level
you just understand what this information means
this melody

and management means the following

it means super fast
i.e. the fastest structure of information development
in the form of optics in the form of knowledge it is not important
before your event
means
structure of event sound formation

here is the sound of the event you need to be able to listen to like this
so that it is instantly recognizable as a positive sound

need to understand
what is positive sound
for any level of event

The universality of this technique is that
that the sound is always the same for a positive event
he doesn't change

there can be a lot of events
but the collective status is kind of radical
he is always the same

and therefore we must learn
hear the sound of a positive event
i.e. like that structure of silence
which has this vibration yes
this this property of information

i.e. in fact, this is essentially
the natural state of man
where is he there
for example , there is no singing there, nothing is heard there
as we say, does not pronounce, etc.

this is the natural state of man
who, for example , contemplates something there and does something
but at the same time he acts simply as a manager
under fairly simple conditions
i.e. in conditions of some kind of silence and that's all

i.e. in this case the control is as follows
that it is quite common
you're just learning
in the structure of a certain optical spectrum
determine

information that corresponds to the sound
and keep this sound in control

so that this sound moves

for example, a day ahead, i.e. occupied an area for example a day
you need to do the following steps

end of day lowering sound yes

For example, you can consider some tones
where the sound is just quieter

for example, remember the background music there

some option is very simple

and beginner level

the same sound but made at the beginning of the action

i.e. it is more saturated

increasing the sound spectrum

You can just determine it by the spectrum

and further in this spectral level

determine the sound forms of the difference in events

where is Norma

for example, there is a man walking on the sidewalk

he tripped and he made a real sound, yes

there is movement, there is its displacement and there is action

in the world everything happens in the form of some actions

this is where we need to define the next level

when God created the world

how did this man even hear then

he could hear something before creation, for example Yes

before the creation of the organ of hearing, for example

this is where the level of body perception occurs

i.e. your tissue system

is in some sound systems and forms

and therefore the distribution, for example, is per day

it's just a sound that has

greater spectrum in current time

i.e. the day is recognized almost instantly

by simply increasing the spectrum of even the color spectrum

or the form changes as containing sound

for a week
there are three fragments to connect
i.e. the primary and final are equal in sound form
and the average is actually a double increase in sound
on information

Of course you can listen to the sound
but it drags out time
better not listen
better see sound systems
i.e. to perceive them
as optical systems signifying sound

so that means that the control is very simple here, why is it given
what we are actually looking at
not the event itself yes
but a certain system of event signs in general

often it is even like the cause of the event
but we don't work with the event
we work with its sound form and it turns out

therefore the uniqueness of the correspondence to the event
it's completely obvious
we work with the environment that has already been implemented somewhere

i.e. we can actually influence
due to the fact that the realized event is in the future
by changing the sound form
we are moving in a better direction for us

and if we see that the event for example
nevertheless, there somehow it tries to bend over
here's how it fits into the structure
where is the sound wave informative
Well let's say not corresponding
let's assume it could be some kind of grinding noise
with good shape and even with good color

for example from the point of view of the structures of Eternity
you still have to be able to not confuse things
here is the golden color it can be the color of Eternity yes
having such an elongated monotonous sound

is there a color with yellowish shades
this is the principle that there is a certain there

a structure that requires attention

seems to work here

that some substructural type, let's say

this golden color option

or let's say the variant may even be golden in color

but it means that it needs to be implemented here

Eternal Development Technologies

here is the detail of the sound forms on

in sight and in perception it is like this

that we actually work without sound

we don't say anything

we don't hear we don't listen to the melody

because it takes a long time

and we just need to identify

the uniqueness of each feature

and so we just look at the fact

information corresponding to the sound

i.e. we learn to see information

corresponding to the sound of the event

and in particular we are moving on

to specific signs of an event

for example someone opened the door yes

there was some kind of bell ringing at the incoming door

i.e. we already know it right away

it's the same event

sound match

with event sound

gives the event immediately in understanding

and when a person meets the event level

he is already in the Spiritual sphere

quickly recognizes

structure of future events

because he had heard it somewhere before

a person can recognize a melody

accordingly, the principle here is the same

you look at the sound form first

as well as a melody for example

if you want to understand which you don't know yes

set such a task

but it looks like the same event

so and therefore if we need
understand this melody
then it turns out that we should see
something behind the melody

and what do we see behind the melody
we see an event
someone is singing it there
people are moving, this melody is pouring out of the speaker, etc. yes

i.e. it turns out that behind the melody we see an event
or maybe it is broadcast somewhere there at a level
it doesn't matter what the word is around this melody

and therefore it turns out that behind the sound
there may be specific events
they are standing
because in this case
the so-called, well, let's call it a control sound
it is a universal system in [...] all events

for example, imagine the sound of Eternity there
what does he look like
or is there the sound of the whole world
what it is like at the point of concentration
there, for example, there is silence, calmness , yes

i.e. it is recognized as a sound form
which unites any sound system there
those. calm, silence, etc.

Well, there are different identification systems.

so here we just need to identify
at the level of some detector systems
what is as i said if there is technology
that is, some events
the same thing if there is sound there is an event

but now to influence the event
through sound, in general, it is possible
entering into the internal structure of the sound form
and changing shape
already influence the event itself

so the next method of control
this is form control

the form differs in the management of themes
that it does have some limited characteristics
well, just as let's assume that the numbers are specifically written there

and therefore, on the one hand, it is easier to manage
on the other hand local action
always indicates the need for greater concentration

i.e. if the control
with sound for example yes or there with color
it is still a simpler system
more well adapted to the normal stage of a person
control

then control the form for example or there by number
in number, however, to a lesser extent, mainly in form
it's still a concentration
special concentration i.e. special concentration

so the first task in this management is
concentrate
in the field of future events

and for this you need to select an event
the main task of choice
what event will you choose

Here is the party program
there is Eternal Life for example
the event is good what does it mean
here is some specific piece of information

need to fold the form
how the carpet rolls up
or take a snowman there and make one
I need to mold something specific
it must be specific that you remember
what did you do with your hands

or did you wind the fishing line onto a reel at some point?
or something like that
something you have to do with your hands
or cooked food
i.e. there must be a tactile, concrete sensation

so you took from a sample of possible events
blinded
i.e. here there is a kind of a priori dependence of two systems

action is Eternal life
Eternal life is originally an action
i.e., as if an inseparable system

The eternally living God is a universal action , etc.
i.e. this is the principle of continuity of action

the form contains after all
the action itself
and the form itself _{yes}

it turns out that we should be here
make a very clear selection
due to more _{standard} ones
i.e., well, let's say, conservative processes of earlier times
Well as if what we understand is completely known

for example, if this task is done in the future
then she looks completely different
from the point of view of, for example, the next fragment of the future
than if it were done, for example, in the present

i.e. the difference is this
what is the task that is done in the future
it is basically different in this method

here is trying to collapse the form of events
in the current tense
this is such a situation that the light structures will simply be reflected
for example from for example from the physical body
and then you'll have to catch the segments
try to mold something
but the physical body
well, how is an element of some kind of World born , for example?
Eternal, by the way

it turns out that it is constantly going on
height
and birth

i.e. here everything is created for God
and at the same time
and cause and effect

therefore the whole world is simultaneously created all the time

and try to mold, for example, the shape of the current
this is the occupation that will lead
to disband the form

because there is you
which well this level of management
is the uniqueness of form

Fighting with a Single Form
He's still somewhere in a specific place.

and it turns out that based on this
by the way, you can work in this method only in the future

this is very important
what exactly from the point of view of the task of the party DRUGG
management is only for the future

i.e. you can see
as in the substructure of work for example by hand yes
"sculpting the form" so to speak conditionally in quotation marks is possible
what can you see is that hands are there for example
in the structure of future information
physical body in current time

This is where it is very important to see
relocation of management structures
along the body
sometimes the whole body goes into the structure of future events
sometimes on the contrary you are in the current time
then there is thought control there into the future, etc.

i.e. here you should see
why is there a glow
to assemble a form is to create a similar level yes
in management

a person having a form
creates a form similar to itself
to translate a form into any other
for example in the sphere
he needs to attach the transition structure
spheres
for example, in a collective image

this is a person's transition to the next level
some transformation of the image

it turns out that by collecting the form
he makes the transition
i.e. he pulls himself into a positive future

when you collect the form you make the transition
a man is preparing food
it provides the body with food, for example , yes
transition also to the future management structure

and therefore it turns out that here is the level of control
he is like that
what you need to mold the shape
as an event sample
pay attention here
the form is entered as a sample of events at once

This is where I'm showing it
some such nodal in many ways
dots
so the actions here are like this
that the nodal form itself
it appears as a concentration of various systems

there it turns out that the access structure is again like this
that you start thinking more
future level of management

and the current level may mean the structure is the same again
that words, well , as it were, acquire several often
another form another action

there are words coming
as a level of counter management plan
there are words going to the future level of management

Here it is important to see that the verbal form
it is often pronounced differently

here's if you look
what is the difference between languages, well , different people
nations nationalities peoples
what
or even dialects

if you translate the whole thing so let's say the transformation system
one language into another
through the concept of "speed"
then it will be seen that this is the difference that means
as a rule, well, from the point of view of let's say there
the same mathematical model there linguistic model
from the point of view of Infinite images

there is such an approach
this is a structure for development into the future
any language can be used
in the structure ahead of the other
at a certain distance in the future

i.e. there is no inequality
i.e. development is still going on
in the output structure for discrete values of the language
sound changes the form of an event

and it turns out that here
once you have assembled the form

i.e. in this method
you are at a certain distance from yourself
I'm just talking about the specific methodological part
it was more of an explanation now on this method

i.e. at a specific distance from yourself
where the sample of events is known to you
i.e. you see the event
or you just need it as a task
look ahead a day there ten days ahead

here is precisely the forward variation
it's any
this is the advantage of this method
no need there just for a day
maybe for a few milliseconds
maybe there for ten years

the form allows you to pull out any event very precisely
so they took a sphere there
moved forward ten years
starting from the current day
all she fixed it's ten years all
the trajectory does not change

and it is quite obvious that the path
from you in the current time
where there is no form formed as I said ^{yes}
there can be no formed form near you
in this rigid understanding of the future

you are in the present tense
the present is strictly separated

then in the future this form has
the form itself accordingly
and a certain trace of the movement of the form itself

and then it turns out that we have fixed this form
as we begin to see the following on the projection
that firstly, ^{for example,} a spheroidal shape
these are more future events, it's immediately clear

to translate these events
on the structure of future processes
you need it, you can use this form
enlighten everything that is happening now

and the further you take the form
the more accurate the clearance will be
i.e. the strategic future is often found
in the current event

i.e. to know exactly the current event
or a little further ^{and going}
you need to know it very well
very distant events

the better you know distant events
i.e. the more you remove this sphere
the more you understand the essence of things
^{for example} there in tomorrow
from the point of view of information

i.e. you understand the essence as well as sound recognition
but you don't have to decipher this option
if you are not interested in him
you understand, go further

ability to work on structures of understanding
if suddenly you see that the sphere that has light

and illuminates the event in front of you
suddenly somewhere the traffic slowed down
so there might be some problem here

or not even a problem
and you just need to do your job
i.e. something needs to be done

here is the definition of this level of management
where exactly do you show
what for example needs to be done the next day
then you can see the connections
from the point of view of all the information in the World

This is a very important control system here.
in the sense that the sphere can be placed very far away
from myself for example in Endless events

and you can take any sphere like that
just raise it higher vertically
there, covering all the events of the World
from the point of view of its action

a sphere that gives light from Infinity
this is what needs to be done
and which is vertical
when it needs to be done

the intersection of two spheres gives time
and you start to see
this is what you need
do you have time there at all for any event
provided that there is such a thing
some kind of system of objective Reality yes

then it turns out that you, for example, are forced
react to it somehow
and at the same time you have to be everywhere

i.e. there is still a method for optimizing these areas
you can also put it in the middle
there are intersection points there
this means that a kind of cross-shaped area appears
Place the optimization sphere at the beginning of the coordinates
then you can still make a selection

but as a rule

at the level of Spiritual aspiration at the level of action
it is often enough
some specific elements of the remote sphere
vertical
and the cross-shapedness is needed for detailing
a lot of things are piling up, a decision needs to be made
then it arises
you additionally insert another glow sphere

in this case I am talking specifically about spheres
i.e. the shape is a sphere in this case
a specific sphere has a different diameter
there big and small don't matter
the main thing is that it is a sphere
you work only with the sphere

and so let's assume to work
with some other form in this case
here you need to identify in the event
and you should for example [...] identify
i.e. the shape , well, the shape of the Infinite Cylinder, for example Yes

then you need to be able to convert
or sphere
or the structure of Thinking
into this beam
this is sometimes quite a long task
Well for example, it takes even a few milliseconds
but nevertheless some action needs to be taken

and here is from your action
to the sphere it is for example one step

to switch to any other form
example, according to the tasks of the party DRUGG
then you need to do a conversion
into any other more understandable form
for example there in the plane yes or there in the Infinite future

then the principle is as follows
By the way, it is very versatile
and differs from ordinary geometry

connection of the sphere of the Infinite
well at least on one side
i.e. the one that is horizontally distant from you
into Infinity

it is visible in principle it is not somewhere infinitely located
it's just very far away
and this can mean Infinity in control

with a vertical sphere
connection at very high speed
gives a plane

at speed for example Well, let's say average , yes
when they slowly start to connect
gives Infinite rays

and here is the connection
planes and rays
at any control point
you can draw any figure

i.e. it is important to remember
my very simple technological thing
imagine these two spheres
if they connected quickly
at the level of, well , your Spiritual instant action
how do you think, you often think instantly
some fragments of Thinking occur

the same thing, they took two spheres and connected them
everyone got a plane for example

and I think that here it is just as if we were united
at the level of there fast action or there slow action
then you just draw on the plane
and then you can draw any event

those. two sphere actions
and with a beam you draw anything on a plane

then we get a projection of the event
and the event is just from here
here they drew a circle and events
understood that the event was drawn with a ray

and it is better to draw rays with infinite frequency
and the one that ends up being held in your hand, yes
or mentally record it there
where does light come from anyway

and it's better to draw not from the side of yourself

and from the inside of the plane
then it is easier for the event to form
and as if the event passes
on the structure of the outer plane and is fixed

here is the 4fixed part of the event
that there is an event
under any combination of external events
positive

this way you already make any form
there are no restrictions here

but you can just work
at high speed just with spheres
and then you move on to drawing

but when you draw, in principle you can see
that you, for example, can mentally say something , yes
in a word, some event

here is the reproduction of words for example with a light form
this is one of the methods of organizing specifically
verbal phase of control

i.e. the following method of word control
and this method is such that you first
you highlight the word from the information
what you need

and in order to highlight the word
It is necessary that the word does not mean negative information
or as if extremely negative
or information that cannot be changed
for the better

i.e. the most important thing is that the word is like this
that you start moving the controls right away
aside well so let's say the opportunity to get
ready positive word

so you must be able to manage words
actually recognize the word first
exactly the one that is in this required event
means exactly positive action
and in the collective understanding yes
in collective action

for example in the management structure
if we assume we are considering
Well, let's say the task is the task of universal resurrection
in the program of the DRUGG party

the word, for example, "Eternal life" just implies
the presence of this fragment
i.e. the ability to change one word to another is obtained

and then we must proceed from this here
that any word is very dynamic
and we should generally find a synonym yes
this word

i.e. we can identify the control like this
i.e. for example you need to know the future
you just take and put
that you need to have a good future there
at this point in the day or on this day

i.e. you need there for example
to have positive events on such and such a date
just say this sentence
you pull it to the point that is best as far away as possible
so that the light from this proposal
illuminated, as it were, the area of future events
mentally imagine the area

and then you start to vary
make a selection from events
getting the right words to implement

those. the upper system is closed
and you get the entire internal substructure
so that it is done in the form of positive words

if negative words arise
accordingly you do the management from yourself

i.e. try to push back the negative phase
and words that are negative can be replaced [...]
and just mechanically

take put mentally pronounce the word collective
and working with words is very useful
because by the way it allows to describe and model

any control

you just need to call
point in space and time
just say the right words, that's all

at the same time initially stretch the sentence
but universal
there having made or concentration positive
or just saying the words that everything is favorable
in politics for example there is a million years ahead
or there a day ahead, there ten years ahead

and already in this period to work under these structures

we need to try to keep the structure fixed
and there wouldn't be too much vibration
i.e. the word is simultaneously controlled on optics
as if the upper control system
and everything else to describe, change, model, pronounce

as a rule, a person doesn't have much time
then it's enough to at least see
that the required group of words exists there

for example, it is clear that everything is positive
there are many events in the end result everything is positive there

i.e. you fix one word
and from there everything becomes clear, yes

This is where I end this part of the educational course.
for the party DRUGG
Well, in general, this is predictive management in the field of politics

and here it is necessary practically and methodologically
very simple and accessible
so that this system of knowledge is understandable and acceptable

and to make it better, even to be fixed
the results are literally there on the piece of paper
a super task was built
the implementation of the control of the future was built immediately
so that it would all be objective

the man saw that he really sees the future
that he really controls the future

i.e. it should be written down right here
as a regular certificate, well, in a documentary type, yes
it will be easier to keep some kind of diary
if possible this is not a hard recommendation
but we need to recommend it to people
or remember
or somehow sometimes mark literally with strokes

that's all
Thank you very much for your attention

I wish this part was there of course
clearly manifested in the future or something
so taking into account the first two yes
fundamental more systems
there were two first lectures now the third

i.e. this course is basically already completed
three lectures
then two more will be added
in about two weeks

so these two first two
in order to reflect it somewhere in a concise manner
some fundamental principles
It is precisely in the political program of the DRUGG party
quite enough

the basic management task
consider that an event can have multiple meanings
and you just need to be able to see the event
without logical analysis

here in the management task
give a person the opportunity to see events
how will they be yes
or to be able means not just to see there of course
and let a person control it

but still, the logical factor
was the factor best next

i.e. the logic is of course preserved
but if a person is riding the subway
he definitely can't know

who will meet him ten carriages away

we need the party member to know this

and as I said, what is needed

so that every person who meets

Well, that's very important

some negative character

to get all the information about the character at once

down to every detail

there are the very best ones, as it were well maybe at the level of microsystems

but knows the exact characteristics

any negative character

so first of all

the more a person knows about a negative character

the less opportunities for action

for this character

so , secondly, we still need to predict

well, i.e. to know that this is a negative character

will make it possible for us in the future ^{yes}

how acceptable is this to us?

how much do we need for political activity?

is this necessary at all

maybe we need it for political activities

there is no need for negative character of actions

so we have to choose here

as I said there during the small investigations

we can use negative publicity for advertising

With good results we don't need negative publicity

We invest ourselves and we only have positive information

so here you have to choose

more important in politics, for example

in general, at best, I think

control

if ^{so} let's say to prepare society

well even the one that doesn't read positive articles there ^{yes} For example

and uses negativity more

there is such analytics in the research

more ^{like} in the psychology of perception

what teaches a person to overcome all the time

some negative aspect
that's why society reacts more to the negative structure
begins to study them

then we need to change the collective Consciousness
to the level of positive systems immediately better
and try as much as possible
apply control to a lesser extent
through the possibility of there from somewhere passing information
as negative

i.e. it's like a wish
It's not always like that of course as if it happens
because as I said, this is a universal task
the task of the party DRUGG yes in another country
it's the same task as any person
having or not having
there is no financial capital there at all
must create a party and take power

then what should he do?

I need to say something that will attract attention
and so that there is positive attention
as a rule, payment is required in any country

No payment required for negative attention

that's why he is often forced
make some statement
for example, there is a ban on death for everyone
and various media outlets immediately start to pounce on him, etc.

and then it turns out that a wave started to go, yes
however, as paradoxical as it may sound sometimes
what is really a positive proposal like this?
people are doing it
and they are trying to protest
there may be a paradox here
in the collective Consciousness

so I think that here in general
maybe there are people here maybe explain it subtly
what these technologies allow
find the desired event structure
and for example there to improve your health and rejuvenate

maybe they know three basic things

that predictive vision allows us to choose
So the person is bigger, *yes as if* protected more adapted
if he develops a forward vision
for example there it's up to one hundred percent
then he is one hundred percent protected
at any warehouse
there may even be seemingly negative events

so what if he still knows how to improve his health and rejuvenate there
then the whole question of Eternity is actually resolved
nothing complicated is offered *as such*

but in principle if he
let's assume Well, there's more of an observer there.
doesn't think it's possible, *for example, in* Eternal Development
and some kind of statement is made, *well, maybe* a typical one
it's not necessarily just a prohibition of death or something like that
and now attention is attracted

then the next task arises
for example, to reach a positive result
as a rule, opportunities are used here
the same technology

i.e. the possibility of prognostication
an opportunity to show people
that the technology works positively specifically there
and is aimed at the benefit of people

and then the opposing forces
Well, it's getting harder for them to fight
so I think that on this wave
the exit from here will be straight

and for any election campaign it's just right to show
that at first the field *is like something* negative
and then it gets better and better
and at the moment of election a person must already be completely
well, as far as it goes , it is presented favorably in the media, etc.
in People's Perception
which is quite obvious
that a man by his own labor
by your own actions there
specific means *yes*
I came to the conclusion that yes, this party is leading in the country

he takes power, etc.

that's why here if there is no certain level of development
some mistrust arises
where did he even come from
Same

but the only thing is that the element
hearing some big negativity
Of course we need to stop it
i.e. it is also necessary that there be some moderate negativity
so that it would be as moderate as possible
although it varies from country to country

In Christianity, by the way, we have a situation
She's generally simpler, I think
because in those countries where Christianity is more developed
It is the faith in Eternal Life that is more expanded
so here it turns out that
the situation is simpler after all

in other countries it may be more difficult

but then it turns out that there might be higher negativity there, yes
then you need to prepare for this in advance
translate religious there to local structural levels
clan, etc., etc.

maybe explain
some more pragmatic side
this phenomenon there Eternal development
more usefulness of some kind of economic nature, etc., etc.

We can do everything on the Spiritual level
at the level of faith for example Yes
and there might be more pragmatics there

so here it turns out
that little detail
and everyone does the same thing, everyone lives forever

so here I think
that this is the distribution option
he is such that we are forced to understand
that working in any one country
for example, there in Russia in this case yes
Of course we must definitely think

about all countries
that this is a universal technology

and try to understand all the time
why do we somehow lead the spectrum of events somewhere
well, in some more generalized systems, yes
why don't we go our own private way anymore

you can take it there
for example, to do exactly that prognosis there
which is completely individual there
to pull the country to a rapid achievement of governance
but then like other countries

Here it is important to think
that we are following the common path of humanity
the path that any person can follow
any at all
This is very important to understand

so somewhere we go like this
that understanding this we simply do more work
per unit of time
than if you just go your own way

but we do it consciously
that's why you need to think systemically
and always think about those who, for example, should do the same
but for example in another country
and in other conditions or there at another time

that is why the general system assumes and implies
this is the kind of movement
sometimes it can be specifically aimed at that

to model more socialized processes somewhere

means or consider the whole level of universality of situations
which may arise in certain events

the universality of situations is very simple
people can make any decisions and any actions
you have to understand that in this case
how a person should act, etc., etc.

the main thing is that anyone would make any decision
whoever takes it

they only became more Eternal from this and that's all

They are of course consciously mastering the technologies themselves, yes
and become Eternal technologically
and those who act against
should also benefit from this
some level of knowledge
which leads them to Eternal development
i.e. we also need to think about the negative side
from this side, definitely not from any other

that's why it's important to hold this position here
well, and any manager according to my Teaching
he still holds this position
but we still need to add control here

that's basically it
that is enough for the current time
Now I think it makes sense to just work on it further
for example, in specific practice

i.e. well, it would be best to write it out, for example
create the main elements in the form of lecture blocks
and it is possible to do it briefly in the form of three lectures
you can even combine them into one
in the form of, well, maybe some kind of concept and methodology
make such notes for one lecture
there for three lectures or there for two

and then two more will be added
we can also arrange things there as we want

There will be more questions and answers further on
after these three lectures

then as I said two will be added

then the course will be modeled
which will be practically
well, more universal, so to speak, for the current time
which will also consist of either one lecture or two
in general any quantity up to five
It's better not to go over five

i.e. there is a simple rule
or one lecture is one lecture
for example, it was said there 55 minutes on video recording

this is a lecture ^{yes}
the simplest way

or
well, although it may not always be 55 minutes
maybe 2 hours maybe half an hour
not necessarily 55 minutes of course

so we are talking simply about the educational plan

in this case we are talking about
that everyone builds their own watch
for example 55 minutes teach 2 hours

and another person teaches for 55 minutes , for example, half an hour
is also acceptable

and that's why it's important here
how to develop a personal concept
well just actually study there
in the management version, retell and that's it
here is the concept ready

next task is tracking and mastering
i.e. how students learn

and of course efficiency
Performance control is the main task

because predictive management
in conditions of rapid change of information
sometimes it can even be a definitely useful thing
i.e. only this control can achieve
reality is often in some position of control

and therefore all party members must be those forecasters
who know the future exactly
we will lead to this

so the requirement will be very simple
not even ^{well} the future management is clear ^{yes}
but it is still more accurate

governing future more accurate
than there is some standard
for example, in terms of rigid systems
there are technical systems for example

it is important that
you still need to be able to
to develop a system of some examinations
well maybe not in the form of ratings
but criteria
how a person does the right thing

if he sees something he makes a decision
he just sees it harshly
and for example there just to record it
do nothing else yes
it's also not right if it's something negative in the form of an action
then it's better if he can see the event
not like in the movies, that's obvious
but it has better event management

predictive management is still
and an accurate vision of the changing picture
and the ability to create an image

God creates each image in an increasing way

i.e. you also need to be able to evaluate criteria
accuracy

although at a very specific level
they will appear often
accurate forecasting
taking into account, as I said, social [...] factors

absolutely accurate prognostication
we can say that there is supposed assistance to terrorism there yes accomplices

and very distant is also not very good
i.e. here you still need to be able to vary
in which systems can we speak with certainty
in which it is impossible in the social world

where exactly is the prognostication that saves the system
and therefore fights with some forces that have been introduced yes
into the system
so that they don't accuse me of complicity, etc., etc.

we also need to conduct training right away
which is very familiar to many from their flight experience
especially pilots, they literally learn in three days

instantly begin to see day there two week
and then ^{well} , technically it's easier
the investigative authorities will not ask them about this
everything matches

and in social processes they may ask

and there are people who are extremely ^{well} expressed
^{Well, let's say} they are clearly expressed
which may not hold this information
they start talking directly, literally and that's it
if two or three levels coincide, then you will have to manage there
so that he simply ^{would} n't be considered an accomplice

that's why it's very important for everyone to talk here
yes, work, but the management task
the one who works must naturally be absolutely free
should not be prosecuted there under any circumstances
law enforcement agencies from this point of view
with no reason at all

that's the point of management
to bypass i.e. to be able to do so
so that persecution ^{from} these authorities
did not achieve results ^{yes}

and the fact that the persecution ^{of} logical systems always protects us
Our task is still de-privatization
they still have to initiate persecution somehow

and it turns out that under these conditions
need to bypass control
persecution can be of different types
external system internal system
who worked before, who even worked well
nose ^{as if} the ability to differentiate a good result

i.e. it means that it is not necessarily who did the job well
he must be on our side
you need to be more careful

We work not only for the sake of technology
We work for political purposes
and good young man
may not adhere to these goals

so maybe that's the only thing he can do

well, maybe the technology won't be used against us
that's for sure i.e. it won't give him anything
You can't work against us with our technologies

and any other technologies
Well, as they say, for us I don't think it's a problem
because we work for all people
and if technology is used against people
well then these people get into trouble
into the normal discharge counteracting
and this is not a problem for us

and that's why it turns out that I think
that the task of management is such
so that a person is free and harmonious
felt the best possible
so that it is comfortable after all, yes, there are different situations there
Nuclear power plants are still something complicated

but it is best to still develop a system of rapid addiction
as soon as a person begins to see the future
the best option so that he quickly gets used to it
by the way to this field of activity
see as accurately as possible
good fragments of the future
and so that he gets there

there are literally two or three experiences
he immediately gets used to the fact that he can see the future
and nothing is feared anymore

it's just mostly due to flight practice
or there for work at the Chernobyl Nuclear Power Plant

so here, in fact, is the pulling out of the future
this is also a very good practice
you also have to keep that in mind

then by other methods of transmitting information
Well, you can transfer these same systems
due to external universal control there
it is also possible to somehow bring spheres there, etc.

i.e. put information into blocks there
pass it there to the right hand, for example, etc.
i.e. what is meant here is that there are different concepts
you can transmit the lecture yes these lectures

for example, the sphere is described there as 5 centimeters
it increases and transmits
from the side of the second cervical spine
to a person
just take and translate and put
he slowly absorbs it there, if he wants to

i.e. you still have to use it
mechanical means of transmitting information

Well, I wrote about color there
Well, that's the sphere, yes
five methods [...] five spheres yes
took one by one little by little
before the lecture began, they handed it out to everyone
they found out everything first
then they dictated the same thing verbally

that's basically it
the only thing is that they are often uneven
they are kind of used
these spheres

for uniformity it is better to give
that's what uniformity is, yes
for example, a tightrope walker is uniform
if he has control in both hands
there are two balls

the same thing is used there
let's assume mechanical principles of uniformity
vestibular system stability once

take it in your right hand
then to the left
also take on the sphere in the neck area
and move a little

that's when he starts
someone who can't learn quickly
begins to master it more evenly, so to speak
when he still has a sphere in his left hand
Well, this is an exception, usually there are a thousand people in the hall.
one or two people

that's why it's here in principle
you just need to use it

maybe some additional means
for identification and management
Maybe

basically everything
the only thing is that there is such a moment
for the future if something happens
somewhere there is pressure from such students
It's best to hide this right away for the future

i.e. give a recommendation to prepare some websites
at some level there
neutral subscription sites

there are neutral sites where the subscriber is not registered
where the company characteristics are there
They don't enter their passport
and work through websites
they say that he sees such and such information
he thinks that this-that-that-that
i.e. to work openly and publicly

all the same the action is directed towards people
and this will be a safety net
Glasnost will be very tough very quickly
that 's all there is to restructure the negative

because I think
that since everything is aimed at saving people
timely publicity is very useful

Well , I think that's basically all for today
as for the questions, maybe there is even some sense
somehow prepare them there, write them out carefully, look at them
although if you write it down, the answers will appear immediately
Well, let's discuss something, think about it
Well then, that's in about two weeks

maybe if it works out earlier I'll tell you then
we'll manage there in about ten days if necessary

You don't have to write questions
It's even better to keep it in mind
here is the current time
so as not to record information
they already came then asked

as a practice
use some specific lectures already
specific questions from listeners

if only there was an hour
that there are one or two or three organizational issues
if there is
so in general you just need to focus on the lecture
and that's all
