

GRIGORY GRABOVOY
The Teaching about God
Number control
20.05.2005

Hello

The topic of my seminar today
this is my Teaching about God
Number control

in this topic i show
how to manage in the first place
internal structure of the number
i.e. having a number to work with
what is determined by this number

and I also show it practically
how is the number itself
for example, to introduce into the management structure as such

i.e. there are a number of situations
when, for example, the number is quite rigidly structured
and it can't be changed
then you have to change the content of that environment
which is behind the number

and in this regard, well, one of the examples
if for example you are on the move
some car must come under control
from a logical point of view, there shouldn't be
let's assume some kind of incident
and the car has a rigidly fixed number

then it turns out that you need to manage with a strict number
towards a favorable situation

and in other systems
for example, a person watches television
in some TV program on some channel
and he remembers that this is, for example, such and such a channel
or is this channel written there, for example, channel 1

then it turns out that the event structure management
through the structure of the number
This is often also a fairly effective management system.

when through one hard number for example channel 1
management is in progress if this is news

for example, some systemic events
every other number

so in this case
number control
you have to do as God does
opens control in the structure of the number itself
i.e. it shows that the number is structured for others

i.e. the mass of events that exist in the World
expressed in some one number
in the form of the number itself
for example five events is the number 5

and also what is projected
well and what is actually kind of extended
what is behind the number
and how to influence, for example , this number

here by putting or even answering
to such questions
you start to see
that the control itself is, for example, in numerical form
this management is quite specific
often quite linear
and in general there is a certain
Well as if a kind of rigidity of control
which says that within the number
we do have specific parameters after all

and in connection with this we practically often
we do not go beyond the boundaries of known areas

therefore the control should be like this
so that we have specific coordinates

and here is the first level
axiomatic control of number
this is the presence of a specific control coordinate
precise control coordinates
behind the structure of the number

informationally it looks like this
that having started working with the number

you are considering what is worth
generally speaking specifically further for the number
right geometrically near the number

and beyond this number
a certain picture of events is developing
provided that you keep the number fixed

for example, so that there is no typhoon
you need to keep the number 9
at a certain control point
and consider the position related to that
what does a typhoon look like physically

then the location of the number 9
and variation of this arrangement
reduces the strength of the typhoon

i.e. management of the aero-air environment, so to speak

when we start working with the number 8 for example
this is the management of the air and water environment at the same time
where is the base for example on Earth
water and air are usually higher
except that in some caves there is also air, yes
I mean by natural conditions

we are beginning to see that this is management
as if growing into a logical phase
what does water rest on

and this is where it comes in
third next meaning of number
what is 8 in terms of connection to Reality
this is a transition through the number 7

i.e. in a remote system
structure of Reality
which is expressed for example by the number 7
seven colors of the rainbow, etc.
so we actually have
also some numerical links

i.e. in the structural area
where accuracy must be determined

the easiest level
it's the same as taking and writing down a number

and for that well for example the number 7
this is the accuracy in the transition system
link after number 8
and they stand next to each other

i.e. it turns out that if we start building
namely a consistent picture of management
this is another one of the systems of precision in control correctness

i.e. there is a fairly high level in the number
in the system of collective Consciousness
determined precisely by precision precisely by concreteness

and so here's how to get around it simply
the structure of specific management is quite complex
i.e. for this you need to make some effort
and it's better not to do it often

that's why it's easier to do it
specific precise control
rather than generalize the control impulse

and in connection with this, well for example, as God does
He has both general and specific management
it's still the same control

and if we consider His work
then the level coming from Him
well from the side for example there is the Physical Body of God
level is a single level
i.e. a single light connected also with the light of the Soul

i.e. if there is an outside observer there
Human
looks after the integration as if the merging of information
then at a certain distance
he sees only a certain system of knowledge
and as he approaches he examines
the same structure as yourself

i.e. God having a human body
shows structure through control
as if by a distant Macroenvironment

where number is a specific expression
the will and actions of man

i.e. if we consider in this system
what comes to a person in the form of information
and let's consider ^{this} positional picture
that we begin to translate every piece of information
into numerical form

i.e. a person receives ready-made numbers
the contents of which were originally laid down by God

in the form of knowledge

then it turns out
well let's consider this
as if a model, as if a control system
we have to form knowledge somewhere
which correspond to the number

and this level is the logical level
amount of information perception
and the amount of the account ^{yes}

For example, you can not count but simply perceive
and we can ^{suppose} to make control
well, having differentiated the count at the level of knowledge
get a specific number that is already informative

this is the area of controlling clairvoyance
i.e. if you need to write an answer right away
to the level of action there
then practically it is possible to get the exact number of the answer
determine from the totality of such an approach

i.e. the following axiomatic feature
approximation of the structure of the number to the person
it is still the formation of a number
at an infinite distance from the number itself

i.e. some kind of Infinite information
forms a number

and in the World everything is expressed this way
finite systems ^{well as if} fixed systems
that exist in the World
they are built almost like this

that this is a projective part of some Infinite environment
or the expressed part and not the projective one

but it is also a projection
expressed part
for example, the physical body of a person
absolutely free level
expressions mean the Will and Action of God
creation of man
but all information is projected onto a person

so it turns out that in the number in itself
if we mean human action
number

then we must correlate the number with the person

it turns out that in fact
contained as a distant projection
from the point of view of God's Action
and that level is maintained
which means
practically the level of a sort of distant reaction
for this event

and this is precisely the nodal level
where projection and reaction are one action
those. clumping action
this is a clear expression of precision
in the Action of God

this is where you look
e.g. Action of God
and want to see
from the point of view of God and you
this is where the real action happens

from God's point of view it is clear
and you can consider His point of view

your point of view it should be accordingly
provided that you are striving to act
quickly and exactly as God works

you can strive to do
but there is no need to rush
speed also means accuracy

and here in the number there is such a characteristic
how fast is the action
because the number immediately denotes some concept

although of course the word means
but in this case we are talking about
what does the number mean in itself
number immediately a certain amount of information

if we start
this volume is still universal
the number may match
more phenomena than the word for example

and from here it follows
what do we get in number management

it is precisely the sign of that Reality which is
and informative
and for example there is physical Reality
expressed or implicit Reality

i.e. if you work through the number
then we can see the forecast phases more accurately
i.e. use the number as a kind of starting point
for the control forecast

because it is a stable phase
which one well as if often means nothing
she is negative for example
number as a platform is a universal module
which is the starting point
for further study of the process

and then we can do it on this platform
to see those, well, fluctuations of the future
which are expressed through this platform
i.e. they seem to touch the number platform

therefore there is a deep entry level in the number
into the structure of future events
this is still an entrance, the basis is an entrance to an event

and if we set the task
go for example to the structure of the Infinite event
very distant in time or space

so then it turns out that we
dividing, for example, space and time
we can very clearly divide the structure by number

by assigning control for example
Well, factually, it's a simple technique

i.e. if there is some distant event
and we, for example, can assume that this event will be realized
as a structure of action

i.e. the events are different but we need to keep this in mind
that in all cases in all systems
you need to be guided by your own will
internal
aspiration for example there to Infinite development

and further dividing the structure of the event
and laying out, for example, numerical series
in space

we see that contact with time
modifies the rows

i.e. in the next second
the row there may be fundamentally different
even by the correspondence of numbers

and here's to keep the row
always acting towards a given goal
you need to know the structure of your Soul
extend to the level of the number of actions

i.e. to make it so that there let's say the score is Soul
for example, there are some big systems there
like multiplication of some tables
study
better to consider Soul
and not, for example, a logical level
i.e. precisely through the optical phase of the Soul

and if you learn to count with your Soul, for example
and not there by logic
it turns out that any volumes of management
they can actually be like instant systems for you

those. the nature of number is this

what about the transition to the structure of the World community
for example, on the Soul management structure
you get a single control impulse
almost instantly

i.e. the number in principle goes over
in quantitative and qualitative meaning
at one point

i.e. the number denotes Reality in this case

and here you pass into Reality itself
through number

then it turns out that the imposition of, for example, a time series
corresponding to this particular system of Reality
this is an investigative logical system

Well, that's understandable
that it is really more of a logical system
from the point of view of human actions
time interval

but if we want to follow the development in time
just in the course of events
where one of the parameters is time

and time well as if regulated by Perception

i.e. there is a change, for example means some natural phenomena
depending on different regions
the seasons are changing
and we, for example, take and tie to this phenomenon
Well, there is such a thing as a temporary system of Perception

then stretching time into an event structure
as if time is essentially connected with something
we begin to see
that there is still some kind of substrate of time
which exists as if objectively independently
from what is happening

and when we start this substrate
output
in the structure of the action on the number
then we already control the number through time

i.e. number control

this is ^{generally} a complex, often complex construction
this type of control

but nevertheless it is very effective for accuracy
what if we start to move , for example, a number
to this substance of time
and time towards this substance
but so that they do not touch

i.e. different spatial systems ^{yes}

i.e. in different spaces

so that there is no sticking point

then it will turn out ^{to be} developing clockwise
some information level of control
where, for ^{example} , by the way, on the structure of DNA
where we have a time management structure
as a structure
and brought in by logic
and simultaneously existing
as a kind of information substrate

those. if for ^{example} well in front of the person
let's pose such an abstract question

this is what would be useful to him
have instead of the concept of "time"

i.e. a somewhat unusual position
to analyze this situation
however, if we have a choice, ^{for example}
what can replace time
here is a simple question

^{so} considering that there is such a concept in the World
as "space"

then it turns out
what, ^{well}, like some kind of peculiar replacement of time
this is the accumulation of information

what is time
this is a certain action in time
and accumulation of information per unit of time

means an intrinsic property of space
there must be something else
i.e. space must expand

if we, for example, make control outside of time
but we are watching
that space really is expanding
and in principle if so
then there is some kind of control outside of time yes
we just came to this logically now

i.e. as God does
from a logical point of view
being outside the control system
He increases another system

hence
next control status via number
it is the presence of a certain angle
external control always

and external management
always increases the system
that's why a person has, for example,
there is a guarantee of his Eternal life

because every action
always has an external system
in relation to action
and the action always improves in fact
precisely as if in a system of as if logical development
and Infinite development

here I said "and Infinite development"
because logic is distributed over Infinity
this is knowledge

and then we actually get that level of knowledge
which allows logic to do
precisely the level of control precision

you can see it here
that the logical level of control is like this
that we see each phase of the number open
for your precise development path

and timeless and by the way

make development it turns out
outside the space system
for example, some element of the future that you don't need

i.e. how can a negative event be excluded?

it's just that you are a manager
in the current time
you can also take it from the future events system
eliminate the structure of that space
where you don't need to be

i.e. the space can develop quite favorably
and exist for example as long as you like
but you are not participating in this event at a specific time

and then the numerical domain arises
i.e. control of numerical series
as I already said now
what about the term, for example, "number series"
we can consider it as a whole, i.e. multi-tiered
as if a multi-level management system
where the intersection is precisely the action of the number
creates some kind of third control structure

so if we work exactly
then this third design
must comply with the principle of the primary series
i.e. well, don't change it, for example, don't reform it, etc.

and therefore in the management of numbers
there is a structure completely

well, necessary for compliance
this presence means the integrity of the series
from the point of view of internal interactions of numbers

when you put a row
you definitely need to monitor this aspect
and look at the following picture

what if interaction starts
within the numbers that violate the stability of control
need some number
or strengthen
or put another number
external control in relation to a series

and keep the line in control

then there is the following action
you can simply improve the row or "enhance" its effect
but generally speaking, it is possible to create other rows
well, that is, the next row grows, etc.

here we need to choose the selection processes
in numerical systems
a person chooses as he considers possible
and for this you can use such a structure
as a projection of the Spirit onto numerical forms

i.e. if we are the structure of the Spirit
Let's look at Infinite Deletion
from a person
then we see that the Spirit often corresponds
exact number

although he is Infinite
but the Spiritual number is an exact number
in Perception

it may not be indicated by a number as such
but the fact that it is accurate is quite clear
as if it is felt on the first level
and at the optical level
during development for example there are sensory capabilities
see this optics

there you can see that when interacting with the number
The spirit seems to be fixed at a point
and the form of the Spirit becomes static
in Perception
this is a very important point

this is an element of logic

and here we begin to move on to logic
from the point of view of the number itself
and then it turns out that we have this logic
we start to build it this way
what does it mean to separate
what is for example the Spiritual in an event or in a number
and what is there for example there is temporary 'or 'temporary
i.e. from the accent of stress means Yes
the structure of the action changes

and here is the transition to verbal form
from the number

i.e. we change the stress
we get a different system of accentuation in action

and then it turns out that we can identify
internal mechanisms of interaction
numbers and words

for example, there for the treatment of a person
known if diagnosis
then you can get healing at the numerical level

but we must translate into verbal form
that there is no diagnosis

and in fact one of the actions of the number
this is the absence of verbal form
in a favorable action

i.e. a person, for example, set a task
beneficial effect
and then it turns out
that he can actually call this action
Well there, for example , the event is "number one"

having received this action
at a certain level of Spiritual Perception
or there are two events, three, whatever
he can perceive

he receives the accomplishment of this event
which is controlled as a one-time event , for example

it turns out that the verbal form
maybe in this logical way
as if to disappear, to change
into the structure of simply Perception of the Norm

and when we see here
this is this internal connection between
number
in a word
and the will of man
then you can see that in numerical form, for example

it is possible to organize human activity
from the point of view of Macro-creation thus
that person clearly understands
number of action

and then it turns out
here is the transfer of information, i.e. the transfer of knowledge
through the number of actions
it is simply the presence of identical numbers
in Perception
in relation to any one action

then one of the following axioms
this is what strengthens the action in a collective sense
this is when people perceive the same event
well, actually through the concept of "some one number"
Well for example, the day on which this event occurred

and it turns out that if we consider
here is the number of the day
or for example there is some number there
which corresponds to the day

this is very important
if we are talking about a number it is one thing
if the number number can be
it is precisely the fixed form in social objects

then we add social status
it depends on how you perceive the number
from the point of view of even the logic of collective Consciousness

this is where you can be
Well, let's look at the controls
that you can be very attentive
in terms of external levels , perhaps?

but at the same time if we, for example,
we do not consider the status of the collective Consciousness
i.e. where the number is expressed
precisely in the form of collective Consciousness

it turns out that we are not considering
a fairly large layer of control systems

so to manage more effectively
It's better to take a closer look at them

so if the number is one
if the number is something else
if for example the word code is already the third

and therefore in fact I consider it the best option
use a simple numerical series for control
just numbers so to speak

and here is the number control
this is still the action of the number itself

if we enter for example there is a "numeric code"
such a concept
then here the logic of some other action already comes into play
third meaning

and here if the number series
it doesn't seem to oblige a person to anything
i.e. he can easily work with numbers
and for him it is just a number
then the code is already some kind of external influence

so it's better to work
namely the concept of "number series"
precisely by number
and not by another understanding of this process

i.e. the concepts for the speed of action are important here

when you start expanding further
picture of action from number
then here it turns out that you can see
how is the word born that is
simultaneously
and in the past tense
and in the future tense of action

here you can clearly see the action of the word
from the point of view of the influence on temporary layers, so to speak

but if you look at it this way
it would seem that it gives us
what we can consider
here is a purely optical influence

for example words on
for a while

Well, let's take the word "time" for example

and the task that you set
make a time change there
some other phenomenon
or another element more useful there, for example, yes
how can this concept be improved
purely abstract task

then it turns out that we should be able to influence
on the structure that is not related to time
and therefore we must study the processes of time
which, for example, correspond to processes of the past

i.e. the action of time in the past is necessary for that
so that time would simply be more efficient yes
in implementation

if there is a task
then it can be done
or you can simply study the inner meaning of the task
do some action
and this action will already be universal and radical

then it turns out we have
very specific precision in management
what does it mean Well for example, we find it now in this hall
and we work like this, for example
that there are some tasks
we work in systems of general management

any person comes out
into the system of general management
and you need to look there
what is being done and how to help someone yes

then it turns out that you can
this is precisely the time aspect
use as a system to accelerate action
in such a way that you kind of unpack the events
by other means not by temporary means
but not after a while

in real time we understand
Well, we work on a physical level linearly
but in the control system
we should already know the mechanisms

which allow you to speed up management
quite effectively

and therefore we must definitely know
some third control mechanisms
which allow you to take some time to unpack
make it
or linear
or polysyllabic
or replace it with something like this

straight level
time replacement for management for example Yes

then it turns out
what we should be able to convert
how to translate transform
or even subtract, you can even say that
number
from some numerical level
and take control into effect

for example there is a number there 4
if we subtract 2
then here is the very action of subtraction "minus"
this is a management that, well, generally speaking, in any case
goes to number 2

i.e. we know the answer
anyway, we do management for some reason, yes

i.e. that's why we solve some problems there
and we do some management

we see that the known answers
still often lead to the current action

how physical Reality is arranged in the World
the man knows where he is going
he is always on the move and he needs it
he knows where he will arrive

and here is this system
the approach I described
it is such that we get accuracy
and commitment in management

how to reach there for example
100% accurate forecast

there for the state of the art
i.e. for systems that are reproduced by humans

because in the information
there are systems of a kind of primary level of Reality
created by God

and if we are already considering
investigative systems
what a person did from the point of view of human logic
we need to be able to consider then
the entire development system
Human thinking
in relation to this object
for the purposes of this object yes

all some kind of financial design systems
tasks of people who use technology
i.e. it is a comprehensive management system
and there can't be any inaccuracies in the management there

we must be able to understand everything
and see the exact picture
and not just connect events there

and here there is a transition
from logic well as if that's what I said
to a greater extent the control logic is natural
it is logically clear that the events are somehow connected

but to move on
to real control of non-logical type
to direct control, for example, over technology
again the simplest aspect of management
this is the aspect of selection in the form of a border
highlighting the time element

what is precision or truth in management

that at some time
the object of information is considered
it stands out as an element of the meaning of action
i.e. what should happen to the system in the future

and then you at a certain time
diagnose the result

i.e. well for example, you diagnosed
for example there is a car
and you need to determine its condition in 24 hours

you know that
that after a day it's like some kind of map
there is a blank sheet of paper
on which it should be written
what is happening or has already happened with the car yes
in terms of damage, for example

it turns out this way
this is a time aspect
you are time-oriented
you write somewhere

by the way, in diagnostics of equipment
the main aspect of management
here is from my personal experience
specifically in forecasting systems
it is to keep control over time

i.e. all the time this certain projective sheet
where the results should be entered
it should be located
all time in one future time

and the time of the future
it changes more intensively
because there is a variable system of events

if the time is current
for Perception it is still a more linear time
more calm
and balanced by the collective Consciousness

then the future time is possible events
therefore in one unit of action
i.e. into one element of space
fits a lot of time yes let's say so

if just from the point of view of the numerical system
analyze this situation in the world

and so it turns out that in the future
we have more spaces
if we decompose linearly

i.e. to each element of time
corresponds to some space

it turns out that the future is again an expansion of space

and when do we start
this extension is well how to consider and translate
into the local action system
here
then it is clear that any disease is then clearly curable
because there is a huge amount of space there
or there is Infinite

and we can obviously draw from there
or a signal for example yes which is the controlling way
just restores health
or we can
just to balance the system
to select only one event
which means, for example, recovery

Well, both methods are effective systems.
The main thing here is precision

we can work
in exact systems thus
that they must necessarily be realized
in the form of precision of work and universality of action

this is when we talk about the universality of action
this is where the multi-level perspective comes into play
as if there is not much to consider here at once
in the form of some elementary connections

but nevertheless you definitely need to see it
that this is an extension for discrete systems
an impulse that is not controlled
this is the action of the external environment

and the external system
Well, if a person is unique actions
related to yours

if the external environment is different
this means that it turns out that it is just an interaction
here we can relate unknown concepts
to the interaction of the external environment

and then we know more about the concept
than the conceptual system itself

then there is another one
angle of action by number
what are the numbers that are
interaction boundary
contain only
investigative level of the system
although they can be visualized

for example, there is one car driving next to another
it turns out that we just see a car

but in essence if we work
with a numerical control system
we must definitely react
on the internal state of the machine
how it is arranged, etc., who built it even
and consider the route of its future development

i.e. in this case
the car becomes predictable
and we start well how to control
already another level of space
i.e. the car does not cause problems

i.e. the level of control
this is the level of precise knowledge

and as a rule even logically
if the driver evaluates the power of another car there
he makes a more accurate decision, etc.

it turns out that based on the level of action, for example
that's exactly in a static and infinite system
we can get the following angle

that static for example and infinite system
expressed in number
i.e. statics is a certain state of rest

here, well, it seems like this local system is perceived

because any static system is a kind of circuit
how do you know then that it is static

but in numbers it can be understood

for example, you can take Infinity
then you only get to view Infinity
takes some time

and in fact, if we look at Infinity
then we are not stopping anymore
we watch all the time
for the next level of development of this Reality

since it is Infinite

therefore the property
fix Infinity in number
very harshly stated

this is often the main difference at work
numbers for example and words

because in the word we can
Infinity is easy to name
and get the same Infinity
without watching its development
Infinity and everything

and in numbers we seem to be constantly and rigidly fixing
and we can even record it

and that's when you start working
for example, a word and a number
then try to make the next level of management
that you will enter the structure
where there is no control for example by word means
and work purely through the number
receiving
and universal
and a private specific result
which is understandable to you
but which does not contain a number

i.e. start managing through numbers

some row

for example the Macro Rescue system
five-digit series that you know
or I can call for example at the current time
this is 9 1 3 9 1

and when you start using this series
then it arises
and control statics
and solving specific problems
and through this row
you can get personal control

and so try
make control via Macrosave
while dividing
The infinite statics of number
i.e. as if an Infinite platform for control

and your personal action
well, that is, it's like different spaces

and having made such control
try to combine them later
that this happens in one space
this is already a realization
acceleration of implementation in physical Reality

so work hard
I will work with you
the division of the control space is actually

when, for example, a person controls
in some, well, maybe even simple situations

and in those in which some kind of action is required
or hold back
or strengthen or improve
then the problem often arises well as if fixing
some positive direction
in Thinking
in the event

and here there is a very effective level
when dividing the control space
different control spaces
so for one task for example

there is space 1 5 10
n there etc.

you can see
that the management here could be strengthened and improved
if we take and build, in fact, as if connecting rows

i.e. what is the meaning of connecting rows
it's what you start doing
management structure in this way
what are you building up quickly or slowly?
but at least you're starting to build up
connections of events that you need

here's how to make the desired event happen

it is clear that there is some kind of contour
it could even be a number, for example the number 5
let it be a good positive event

then we begin to see this event ahead
and lead to it through the contours of the numbers
number series yes

i.e. with a certain amount of practice
systems are visible well like the terrain so to speak
control field if you can see it that way
In principle, you can look at it exactly like this

i.e. a specific option arises there
well some riverbeds yes it looks more like that
where is the river this is the development of information
towards the control action

and that's when you start to commit
some elements of indirect nonlinear action
and to take a closer look at geometric systems in general

which is not always necessary of course
but in order to understand
the structure of the external world
if you have time to do it
sometimes it's better to take a closer look and see
that the action is through a certain bend
it's not always like that Well is it worse, so to speak, than direct action

i.e. it is already possible for managers
you can of course also take direct action

but sometimes it makes sense to observe the system
how does she behave in reality

and here is this observation
this is actually *like* creating a control relief

as God does
He creates everything naturally after all.
and therefore for Him the relief
it's some kind of slowdown in control
some other level
why do we need complexity at all

in order to know something third *yes*

and here, *as it were*, among the management
there is the following knowledge of God

Here is God, *for example*, how He should develop Himself, *yes*
from a human point of view

i.e. a person has tasks
God has them all solved

then it turns out
what should God do for Himself in general
so that *there would be* some human practice
put into effect

somehow bypass these decisions
He knows them anyway

and in the movement of His Soul
this is a bypass of some things known to Him
i.e. He always bypasses what is known to Him
knowing this

and when you start to act *like the same*
it turns out that you begin to see the structure
how should the series vary at all
change both in space and time

from the point of view of fact

that you are in the inner area that you are going around
you know what's going on

but you can know at the level of the Spirit
and bypass, for example, with the Soul

The soul knows everything anyway
from the point of view of the Infinite logic of development

but it is precisely for the structure of Eternal development
you must have clearly developed
mechanisms that you don't get tired of
and which you implement
as simple mechanisms in control

then having learned, for example, the optics of controlling the Soul and Spirit
you can clearly see that it is possible to work
in one space of Thinking for example
or physical space

and that means doing different procedures
just different levels of management
or Soul
or Spirit
or there an element of Consciousness
or radiation from the physical body, etc.

there is only one option here
which needs to be monitored very carefully
from the point of view of standardization

that in no case
the action of your physical body
it shouldn't depend on how you manage
at the information level
or there Thinking

the body is always free
you must do what you want
but at the same time you must be able to manage calmly

and therefore you must act like this here
so that from the point of view of for example there
Of course we are talking about it
on the creative action of the physical body
that with such action of the body

you begin to see
as in the conditions of precisely the free creative action of the body
or there Macro-creative action of the body
to place external control over the body

then it turns out that it really is developing
it is the level that is going on
from you directly
into the structure of Infinite Development
and you see that it really is from the body
information development is taking place
from your physical body

it turns out that having studied this process
we define it quite clearly here
such a level of action
when the connecting levels are visible
body actions
and your personal task
which is located somewhere in the control space

then it turns out that you see the connection
bodies and tasks
and if this connection
objectively related to physical space
well, i.e. you need to , for example , go into some car
you must act with your body and physical

then it turns out
that you act out of necessity

only in that case
when there is some kind of system, well, precision
conditioned
and the task
and as if by some objective factoriality
in physical space

and based on this
by the way, if we consider
some types of wrestling for example
namely the physical action of sport

here you can use it
this number system
in order for your objective actions
i.e. the purpose of development of the physical body

organize by constructing external information

through this type of approach for example
where number systems are used
as a precision action system

and then there is any movement of your hand
this is a precise action
or any movement of your body
precisely in the physical plane
this is an action where you calmly implement
and your development
and at the same time do Macro Management

in this case, by the way, implementation
namely the actions of the physical body
becomes a more simplified version
and by the way this is the level of management when you can
somehow help yourself in the implementation of personal affairs

i.e. you need to take some paper
and for example pass it on to someone

then you can control
just with your own physical body
arranging the information in this way
what to the first level
you must come to that place
where you want to convey something
well, just some kind of logical example

so of course you will still come there
Well as if a necessary action

your free will
this does not diminish it in any way
because it is your personal choice
you can go you don't have to go there

for example, you chose and went
or someone should come to you yes
to convey something
then you are in one place

and here is the next action
this is a very important point
in the management of time and space

precisely in connection with the human physical body

what can we time aspect
something that has to do with time

transfer to the structure of the Spiritual
or the spiritual development of a person
where he develops the structure of the Soul
in the management area

and then it turns out
that you can do well without being any different from other people
to calmly be in the mainstream of the development of the World
that the world naturally develops this way

i.e. as such

It's like you don't use control at all
it's just that all the events of the world happen this way
what are you calm about ? as if there if we allow such a term
there you kind of "flow organically" or something
into the system of this control
considering the actions there as some kind of channels
by the way, there are feelings and actions there
often resemble a kind of liquid phase of control

i.e. the person seems to be there at high speed
along with the water it rolls down some hill
in this control system

when you work through the integration of numbers
in management
looking at your physical body
as an element of external control
and the control is from you

and here is where the following situation arises
that by controlling your physical body there
his actions from the point of view of logic
informative control design

you see instantly
that in principle it doesn't really make any difference
control your physical body
or help someone else, etc.

but in your case
this is management
you work on yourself

and in the case of another person
this is the help he can get
or refuse or, for example, not refuse

and it turns out that God does the same
He is in complete control and is everywhere.
information
knows everything and is proficient in any control system
can handle any situation

but here are the people
someone agrees
some don't

and when you start to analyze
the system in this way
how in these conditions ^{can} people have complete freedom
transfer knowledge so quickly
so that no negative effect occurs

and at the same time the implementation
from the point of view of the Will of God
there is your will
the will of man
other people
all this implementation happened

that's exactly what we see here
that there is precisely an aspect
well, some kind of pre-control action
which is determined in fact by that
what do you see the management of the Infinite

that's exactly the Infinite Control Factor
makes it possible to act immediately and accurately

it means that there is that structure in the number
which exactly produces
Infinite control system
for the harmony of universality

and from the point of view of that
when we look at the picture

what from the point of view of God's Action
we have for example the structure of Infinite action at once
then from a human point of view
Infinite action can a person get
for example if he is looking at the Infinite Picture
and perceives it

i.e. he doesn't just perceive it there
that it exists
and as a practical tool

and can also get
if he just aims to live there indefinitely

if he still understands the status of Infinity
where is it physically located
there inside for example yes physical body
then he already has a full control complex there
towards Infinity

then his personal presence is obtained
this is already the action of Macrosalvation

i.e. it is at the level of Macro-enlightenment , so to speak
it works quite logically that way
what do we actually get Macro level
from what he understands
i.e. the body that knows yes
a knowledgeable person

and it turns out to be effective
knowledge is action

and here in the number this level is concentrated
as a structure for the transfer of experience
and other people there of other generations
through the structure of the action of number

Well, in settlement systems it is very clear
but i mean just in the usual number

here the transmission of information is multifactorial
still connected with the previous level

and so we have here

such a management system
that based on the further action of the number
when we see the investigative system
we can get the whole previous system
i.e. the background
and everything connected with this number
and generally speaking everything that is connected
very conditionally or there is a distant connection
according to the system of general communications

those. in the number system
it's easier to find any information
based on some one number

i.e. if you set the task
how to determine for example
control space

then it turns out by setting the task
how to make the control universal
from the point of view of the action of numbers

then you need to find the number
which is like an external control yes

and here's how I said it
if you enter into the logic of the development process, for example
ask the question, for example, in the same way as we asked the question
about time
why do you need space ?
Well for example, exactly such a space yes
which is now

then it turns out that there is the following element here
that the concept of "space replacement" does not exist after all
there must always be some action
and as we know when expanding
This includes physical space

i.e. physical space
it is like one of the forms of expansion of Reality
There is , for example, Spiritual Space, etc.

and when do we start doing this management
from the point of view of, for example , human health improvement

it turns out that this question is like

Well as if displacing space
from the structure of Reality
where only the substance of time remains
which means it actually makes it unstable
the process of cognition itself over time

i.e. the structure of time
becomes less knowable
then it turns out that we mean as if we were even stretching it

i.e. in the control system through numbers
there are systems
which are actually very strongly interdependent
depend on each other

so we'll use the example of space and time
we can show this quite clearly here

and in the case when the related parts of the event
you can highlight the event that is most important
at the moment

those. if, for example, you need to work out
some very urgent events
in relation to some action
then a person must for some time
focus and understand
where should he act right now?

i.e. he should even be there apparently
at the expense of some other matters
see and understand and still have time to do yes
for example for Macrosalvation there
for some personal purposes

and here such a level arises
what if we, for example, set the task of Salvation
as a task of immediate action
or there is a fast acting one
then there are also tasks of Macrosalvation and Macroaction
which, for example, can after a long time
to be realized or to be gradually realized

and here it turns out
that here is the aspect of development over time
this is the structure of creation as if birth
there, precisely in the control system

next level of space

and when we talk about that
that we control events
so we mean always
what are the best events
from the current time to the future
or even if you change the past
then you still record it in the current time

it's like the current time
this is a system of some kind of correction of event diagnostics
at any time

when you start to perceive it
you see here in essence
such a level of realization from a person
what can you get
as if a super-remote action
only by the fact that you bring any impulse closer
or there is a distant close one
to yourself
you are zooming in correctly to the right point

and then you begin to understand
there logically there
as if some kind of logical action
what is Infinite Level of Action
i.e. action in Infinity
this is the control system
which, well, actually, by and large
it is implemented as a system of a personal nature
for numerical control system

i.e. in number management
still more pronounced
personal management plan
precisely for the Infinite aspect of action

and here then it becomes clear
that the number that localizes exactly
as if the final form of the Infinite action
still contains real Infinity
because you recognize
through your own signal coming from you

and you as an Infinite system

you can output
only Infinite level control

pay attention here

which is very easy to determine in numbers
that any person
he actually always shows it in control
structure of Infinite Action

the impulse that comes from it
logically, he doesn't disappear anywhere
a light pulse passed
and the light is somewhere

it is physical light that is scattered
and that light of control
it causes an action to be performed

and then you find it
in the numerical domain you can find areas
where are all the initial coordinates of the action

i.e. what the person wanted
and what did you get in management

then it turns out that by analyzing or having
this picture of actions
you can always consider
the precision of a person's action
and gain tremendous experience
in management there in some topic

why, for example, in some professions
an experienced specialist can teach more
because there is an unconditional transfer of information
often here
as a theorist, well, in words, yes

and the practitioner gives more there, for example
because he practically sees the other side
he conveys information differently yet

and it turns out that with the same words
with the same numbers and forms
this is another information transmission system
personal plan

it is due to the fact that in the number there is
the level of information translation to you
at the level of, for example, some kind of logical action
level means some periodic action

where is the level of information that comes to you
should be absolutely clear there clean purified

from some unnecessary systems and connections

and for example in this system
to restore health to people
if a specific person doesn't need it, he's healthy
then manage events or manage situations there
related to the recovery of another person
to speed up the recovery of another person

here is such a principle of the number's action
what are you starting to do management
Push

and this is the management
can be done quite quickly

i.e. you can quite well make control
coming from you in this way
that you are this action of control from yourself
you start to make it as if it were an instant level of control

i.e. translation of the number
into action form
translation of number
into a single instantaneous impulse

and it turns out that when you
for example, you make the control come from you
as a system of this instant action for example
then it turns out that you are coming back again
as if to the primary fact of oneself
but already in the next act

i.e. you see yourself
practically in the implementation system

Thus
and here I repeat it again on purpose
this is the action you accumulate

well, actually, like energy around itself, yes
means some information in numerical form
which is at super speed
conveys your own image
but already in implementation in some event
into action
and you get yourself
but when you have already solved these problems

and here is the action in receiving oneself

as God does
He always turns out to be His own Image
implements yes as if He were developing it for Himself
in human understanding

then this is the level
means super speed action

i.e. a person who, for example, acts in this way
it just occupies a niche in space
precisely in the variable
in some multivariate space of the future

takes up completely
a certain clear niche in future events
that's exactly what will happen

and no one has time to shift it to everything
that's all
it's like a super-fast fixation and control system

and this system can be used
not only because it's fast and accelerated there

for Eternal development by the way
a very suitable system in many ways
often it is only uniquely suitable
because for Infinite events
it is precisely a system of leveling, as it were
super fast action
This means that this is one of the fundamental provisions
precisely in the Infinite Plan of Action

because it would seem that action is possible here
and calmly
but from the point of view of Infinity

any generally speaking periodic action there
which is an interval or finite value
it's always super fast action

here from the point of view of the logic of development of Infinite systems
any action is super fast

then one of the signs of management
in the Infinite Plane
this is exactly how to get speed of action
from the point of view of an external observer
which is located
for example on the Infinite Action platform

and from here we found the transition
where is this outside world anyway
under your control

this is exactly the platform
which actually means
that level of management
which you have
in a system of remote action, as it were

i.e. you have, for example, the external world
as a system that perceives you
in some kind of super-fast movement, yes

because from the point of view of logic
this is a fairly correct level of action
then you implement
because a person perceives
e.g. Action of God
as including super fast action super powerful there

and if you are tuned to that control
to synchronize with the level
that you act quickly too
from the observer's point of view

it is clear that firstly the observer
properly balanced
is located on the Infinite Level system
i.e. you sort of level it out and improve its events
and you act correctly on your own too

then it turns out

for God to do
this is precisely the stable picture of management
He had to create Himself.

means a person in the Image and Likeness
and then the Action becomes stable with God
for Myself
and for a person ^{yes}
and there is no third level anymore

i.e. there is this mutual action
those. interaction
where the interaction is precise
it is an interaction with another person
which develops infinitely

i.e. such a simple logical conclusion

here it is from the numerical control system
came out

and when did you ^{put} forward
this is precisely the logical conclusion to a greater extent
then it turns out that it is very appropriate
for the accuracy of action from God's point of view
for you to act
because God set the tasks of development
in front of any person
namely the Infinite level

you have to try all the time
take another person out
in the Infinite Development Environment
for himself

and the digital control system here is like this
that you start to prove it

often at the level of specific ^{assumptions there}

Well in general, some formal numbers
where your very simple primary task
is

bringing information to any person
which ^{for example} maybe he doesn't know ^{there}
or does not practice my Teaching
or is he far away altogether
from the tasks of, for ^{example,} Infinite Development

then it turns out

here is the information delivery system
for example through a number
this is that level
which is actually arranged like this
what can you get in general
this is what is this super-far level of development
ultra long range action thus
that concentrating on something

i.e. by introducing control there in verbal form
somehow or doing something
at a certain level through the number
pass on knowledge to everyone

and you must clearly understand
that you can do it
that the other person who accepted your knowledge
well let's say some kind of telepathic education system
Spiritual education system

by the direct action of the Spirit

what did that man know
that's exactly what will save him
and forever

that's when you start
this level to implement
in relation to other people
then how do technologists who practice
according to my system, well, for example, numerical control
so according to my Teaching in those systems
where for example numbers are revealed

then here you can see
which can be developed very precisely
namely the system of collective Consciousness
collective knowledge
aimed at that level
where do you get what you have
the structure of Infinite Development
as a fairly complex system of action

i.e. you get
from your knowledge
from their goals
from its movement

in general education
because you are moving in that direction

and others may have very clear knowledge
who see you on that sort of hidden plane
or physically

and that's when you start
this is the level to realize in yourself
then it turns out that you, well as if we came to some kind of system
there is propaganda of knowledge
on a certain system means universality of knowledge
and one that practically looks like this
what is your management
increases together
Well let's say with a certain control force
other people

i.e. you see it absolutely clearly
that the more precisely they control
in the collective Consciousness
in collective action

other people
the more precisely you control
in general, the whole system has its own tasks

therefore the next level of management
through number
is a collective factor of management

and this internal number system
it is such that you must definitely look and see it
that others can do it
very intense, correct and harmonious

that's how you
you see the level of harmony
then your task will definitely be realized

those. interaction
by solving other people's problems

then your task
it seems to be naturally resolved

and then the number is no longer manifested

in its entirety or in some other form
and simply Reality is manifested
which was realized like this
as you indicated

and then it turns out
that control through numbers
this is already to a greater extent
your Spiritual Directorate
this is Soul management
this is the development of your own Spirit
Consciousness

and you own it
because it already exists yes
is related to you personally
with the shape, generally speaking, even of the human body

then it turns out that you are already practically
implemented management harmoniously
by all factors and in general quite correctly
exactly in this correct form
such as the numerical control form

and here, generally speaking
although I have shown a lot of information now
about the number
however, to a greater extent
I would like you to look here
namely the hidden structural management system
where the Spiritual planes are more expressed
Soul Management Plans

and when you are here for example
start doing management
and lead it well let's say it this way further
to keep synchronization active
you have it there with all the collective levels

then you can see
that your help to others
the more you do and the more you can do
the more effectively you help others
the more accurately the tasks are solved
and others and yours

and here is already the next one
as if a numerical form of control
that the number goes over
in a word
into space ^{yes} or vice versa

and then you get
one very concentrated medium
just concentration
in the form of such optical radiation

and you can already work
just this concentration
just be in a state
^{Well} as if a precise control system
where precision is harmony

here is the relationship between precision and harmony, ^{let's say}
where you have harmony of control
where you have precision in control
this is very important

in the management of numerical forms
It is important to have precision control in this way
so that you ^{actually} get control
from the level ^{of} pre-management even

i.e. without performing control
you should still get it
precision in control objectives

those. pre-control
you must have it right

and here it turns out
that in the system it is precisely pre-control
you can see and examine it quite well
control system in this way
what else can be controlled
and processes that are not declared
through number

i.e. because the number when it is transformed
then we get a system ^{as if} there is no number as such
we just get the event

so in the numerical system
to develop to Infinite development
control

you can get more
and the structure of the pre-control action

those. where is the pre-control action
which has not yet been realized
already manageable by number
i.e. as a consequence of the development of the number

and in connection with this we get
and also the perspective of universality
from the point of view of not very fixed events

and based on this
we can see quite clearly
as if the next management status
that through numbers one can control
systems that are not defined
because the number is determined

and that's enough for us
one specific number
to manage, for example, uncertain events there

and then it turns out
a whole spectrum a whole series of events that are not defined
we can then modify any event

any information that visits you
and which you, for example, perceive
change for the better

i.e. there can be no information
there is extremely negative
You can always improve events
even if their source is not identified

i.e. there is some information
negative for example even if there is a point
or maybe about negative
or even the one that you might not like, for example

then you take and can through the number

enter the management structure of this system

and then you already cover
in general the whole series works out
positive events
the impossibility of realizing yourself for you
negative control system

and then it turns out
what is this structure anyway
fixed Eternal development

i.e. when you encounter this
and start at the management level
this is to consider
then you have
already a structure of conviction
from the point of view that the implementation mechanism
in the system of Eternal development it is implemented
because you are convinced of it

because you have technology
as if some mechanism of action
precisely precise in terms of numbers
and it shows practical Reality

then what else could it be
well, more in the control system
rather than the ability to implement management
consider the structure as if inside oneself
i.e. dependent only on you
from your Thinking
from your actions

and that's when you bring the controls
to the system of his personal action
it turns out that it doesn't matter at all here
what external information exists there

For example well, or negative
or there is a positive sense

you can choose of course naturally
exactly when you work in a creative way
then you choose for yourself too
an exceptionally positive direction in development

then it turns out
what are you getting into
into the general system of Macro-creation

why exactly creative work
it is often work first and foremost
for the person himself in many cases

because it still transmits information
through yourself
and makes himself feel positive

just like there is some negative there
always affects the person himself first of all

with this system digital
here it is clear how the system simply returns the action
as if a reverse reaction of the action
and the passability of the action as such

the number is realized
through some adjacent and consecutive numbers
i.e. to show the number axis
I still need to calculate some numbers, etc.

so for example the translation of a number into Infinity
of this eight
this is already an action of a different type of control

and based on this
so that there is not a single unfavorable event at all
For example, a person had nothing left
necessary often
how to grow the number line like this
so that the numbers represent
exclusively the Norm of Events

and for example you can observe and consider
control near you
in the form of numerical series
even the same ones
For example there are eights, nines or sevens

if somewhere the number is somehow understated
then it turns out that you begin to see
that there is some problem here

if the number there is even, for example
and just install it

i.e. the level of that
that there are very simple and technological techniques
in working with numbers
where the number is used as a diagnostic system
and the normalization of a number is the Norm

and therefore
behind complex number control systems
there can always be very simple known forms
very clear and very effective
which imply that
Well of course it's not only numbers that can be controlled
in many situations and any other
some elements of any control

but nevertheless
that's exactly it, if you specialize in management
work by numbers
Here it is of course important to highlight
accuracy correctness speed availability
and in general an opportunity
in the rapid transmission of information
where you solve all the issues at once
and about transmissions
and by stability
and according to me, Macro-action

it's still a local number
this is integration with the Macro level

and here is the knowledge of number
how are the systems there Infinite action
where there are many numbers
this is also a system
sufficiently effective management
which is very useful there

I think we need to expand this system
if possible, to those who would be interested
exactly at this level
who understands this better
This is often a very effective system.

and as a rule, number control
it's actually a universal system
it becomes clear to everyone very quickly

so try to pass this system on
as often and as quickly as possible
and from here you will get
for myself there are many personal results there
and by knowledge
and in management practice

This is where I end today's seminar.

Thank you very much for your attention
