

GRIGORY GRABOVOY  
The Teaching about God  
**Prevention of environmental disaster and terrorism**  
30.11.2005

The topic of today's seminar  
This is Prevention of environmental disaster and terror

In this topic I want first of all  
show the technology of neutralization of chemical elements  
which are now present for example in Amur

and here in my opinion it is necessary to consider  
next control position

from a management point of view  
any chemical element  
is located as if in information in two systems

this is the first system, this is the external environment  
when, for example, there is some element present in the water  
chemical for example there is benzene

and the second element  
this is when you consider the immediate action  
some chemical element  
on the physical body of a person

and in this case it is necessary to consider  
already the second principle of management

therefore, management will proceed according to two principles

First of all, it is the management of the external environment  
i.e. not to give the element the opportunity to come closer at all  
for example to the physical body

and the second one is already directly  
if the approach comes  
then do it so that it reaches the physical body  
to the level of your information where there is a physical body  
so that the neutral element can already reach  
or no element at all

so for benzene it is specifically the next row

which takes into account these two principles of management

and the next digital row

This

79541718

can be controlled if for example we consider

in the blue spectrum

i.e. just like at the level of blue color

then the next three digits are enough

just 371

and try to bring out the blue color

into the structure of possible contacts

for example you come into contact with a surface

where is there for example a harmful chemical element yes

second control

you work with light

Well for example with liquid

and it turns out that you can

just say three numbers briefly

this will also be enough in principle

and here the main element of control is that

that collective management

It is advisable to make the control this way from 22.00 to 23.00

to prevent approaching Khabarovsk

the bulk of chemical elements

which are now present in the river

and generally speaking, make it so that they are not present at all

from the point of view of harmful consequences, so to speak

therefore, management also consists of

to influence the social process

which provides this Reality yes

i.e. for example the work of various services

but first of all you need to do this

to directly decompose an element

in the mass of water itself

and here is this action

This is direct control that requires consideration  
how is it arranged in general  
that type of aggregate chemical elements  
which are now in Amur and approaching Khabarovsk

i.e. in this case it is necessary to consider  
next control position

in fact, there are quite a lot of chemical elements there  
and their properties change depending on  
how does the combination go  
some micro reactions are taking place

and here for a person first of all it is necessary to consider  
what is the most harmful

for example, if benzene is in the water for more than a day  
that means the properties of benzene  
from the point of view of penetration through the skin  
they increase there for example Yes

if nitrobenzene means consider in pairs  
then it is a more harmful substance than, for example, in water, etc.

therefore the task is to consider

like a vector version, just a variant

i.e. consider what is most harmful

for example, right now

and what is harmful in general from the point of view of information

because there is another management principle

that we should see that structure

when generally speaking this information should not be allowed

for example, to the territory where people live, so to speak

i.e. there is also the following management principle

so now it is necessary to consider the following

let's start with the most common element

Well, let's say it's simple and at the same time more subtle

this is to make the information itself

means approaching chemical elements

harmful to health

wouldn't be well as if the one that brings some nervousness

or it puts people into a state of unrest

i.e. it is necessary first at the information level  
remove this problem

that's why I think it's necessary here  
give guarantees to any person  
for example, chemically harmful substances  
did not penetrate his body yes

i.e. that is why the concept of "calm down"

this means being able to neutralize chemicals

and so we select a vector that is cumulative  
directed towards, for example, a possible yes person  
and we are already working on reviewing interactions  
this chemical element for example with the human body

because for the human body in principle, in essence  
if so at a distant level of Infinite development  
it doesn't matter what the harmful element is  
for example there is

because for Eternal development  
the human body must be protected  
from any possible combinations of any harmful situations

so here we need to first of all identify, so to speak  
universal some level of chemical harmful systems

and here is this universal level  
it looks like it's on the optical system level  
as a system, well, similar to, let's say, a drop

i.e. you need to recognize the system in the information  
then you will work at the same time  
and on information  
and on physical Reality

here is the recognition system  
this is a system of first of all identification  
as I said, drop-shaped

and if we consider  
well from the point of view of how God works in general  
so that there is no harmful effect, for example, on a person, yes

when organizing a person  
the concept of "element well" let's say harmful"  
is located on the Infinitely Remote Site  
general information and Reality

so it turns out that at this level  
need to identify the form  
and take out this form  
at the level of information to the Infinite point  
as Infinitely Remote

however, the physical location will be the same

and by the way, you can do this  
well for example there are laboratory measurements of liquid  
i.e., having isolated the main vector in a drop-shaped form  
which can be harmful

we are on this drop of information  
in fact, we just move  
somewhere to a remote point  
and then we take measurements of the same liquid

and this is the movement  
should look like this  
so that we can clearly see the point  
into which this drop moves

i.e. this drop should not dissipate when moving  
there somehow fall apart  
we must deliver it in the same form  
to the point of infinity

so in order to move  
identified form of negative information  
There is a special series of digital

and this row is next 977751

i.e. we moved the drop across the digital row  
and the drop is in a fixed state

now we need after this move  
which was done in a very simple way

visualization of a drop  
and you can simply mentally imagine a series  
or even write it there  
draw a drop schematically  
under this drop

i.e. we <sup>kind of</sup> created a route or some kind of road, <sup>yes</sup>  
and real movement

Now we need to look at it from the inside  
i.e. we need to consider  
chemical compound from the inside

with all this in mind  
i.e. inside the information actually

with all this, it is desirable to work  
with large masses of water

if we work, <sup>for example,</sup> at the level of counteraction  
through collective Consciousness or individual  
or collective, <sup>for example,</sup> from 22:00 to 22:08  
you can work specifically on that  
to neutralize approaching chemical systems

this means that here too it is necessary to work locally  
<sup>for example,</sup> there from the point of view of detection in the Amur  
where are the main systems located

because you need to be able to diagnose  
different levels, <sup>well,</sup> generally speaking, of the thickness of the water itself

because now, <sup>for example,</sup> along the bottom  
there large masses have advanced further, <sup>let's assume</sup> Yes  
and the surface spot is located, <sup>for example,</sup> a little higher there

and therefore it turns out that you need to find first of all  
main concentration  
where is the main concentration  
and where is the main harmful concentration

and already from there, from the main thickness  
<sup>for example,</sup> they isolated this drop there  
and brought into the structure of the Infinite

i.e. for any volume the technology is the same  
what are you working on

for example with one small element yes  
molecule  
or that you work with any kind of mass of information

and therefore it turns out that it is necessary here  
means to do such an action  
what you first of all have to decide is  
Well, what level do you work with first of all?  
i.e. either it is a large volume of some specific  
or maybe it's some kind of micromolecule there

i.e. here we also need to keep in mind  
that no matter what volume you work with  
the main task is to ensure that there is not a single harmful compound  
did not enter the human body

so in principle it is possible to work on a microsystem  
but get the same effect in management

because in the end we just get the Norm  
for the human physical body

and that's why it turns out  
what is here, here, identification means tasks  
this is also a special technology  
i.e. try to diagnose and determine  
volume  
and make the control first by volume

and then come in anyway  
in the structure of the chemical substance release  
and do it in relation to the chemical substance

and here in the chemical substance  
there are different types of control means  
there is a principle here  
what you can consider  
for example, a crystal system  
i.e. to consider how matter is structured  
and be able to split, for example, in the body access system

i.e. not just split there as such  
namely, so that the substance does not reach  
in the temporal aspect  
human body

This is a special technology that implies

what you should see is the interaction of two objects  
i.e. the human body  
and external systems  
for example, there is some harmful chemical element there

then it turns out that if we consider this  
as a collective action

because in the system, for example, there is destruction  
destructive of some systems of the World  
there are quite a lot of elements  
related  
namely with various chemical elements

i.e. in principle a person quite often  
does this job well as if automatically

i.e. it is in some kind of harmful environment  
and his Consciousness  
The soul of man  
constantly compensates and defends itself

from various impurities of some environmental problems, etc.

and here's to prevent  
namely an ecological disaster of any type  
needs to be considered  
human reaction mode  
when it is, for example, in natural conditions  
he does this work but doesn't seem to pay attention

for this we need to highlight the system of Thinking  
which is sort of responsible for this process

and then we need to consider it specifically  
where exactly is this area of Thinking located in a person

if you select an area geometrically  
for example, there near the physical body of a person  
this is the area of the right shoulder approximately

so if we consider  
that Thinking is not connected  
here is geometrically with the human body  
then this is the area of Thinking that is responsible  
for a kind of reproduction  
increasing the speed of thinking processes

Well, actually, this is the point of Thinking

and we need to work at the same time  
on more systems  
I roughly listed two controls there

maximum speed possible  
bring it to the level of, for example, the right shoulder  
and work through the glow  
Well let's say in this geometric place

i.e. we increase the structure of the glow  
specifically locally  
at some point of the physical body

and by the way, this is exactly the method  
the ability to highlight there  
some points near the physical body  
This is an effective way  
in order to counteract  
any environmental problems

i.e. if you are located, it can be just anywhere  
and you start to feel

that there is pressure on the environmental parameter  
on the physical body  
then you can relieve the pressure  
simply by means of intense, as it were, illumination  
a certain area of skin, let's say

It is better to work near the physical body  
i.e. not fixating on the physical body or on the skin

so it turns out that in this case  
you just concentrate on everything  
in the area of the right shoulder  
and you start to hold control in this way  
that you simply increase the concentration of silver color  
at the point

this point begins to gradually expand  
and the external impulse is neutralized

i.e. in fact you are entering into opposition  
at the level of well, actually, two  
as if diametrically opposed

but in general there are enough equal systems

because the external system

for example, a system of chemical destruction of a person

it is considered as such a system

which has a certain resource and power

and maybe, for example, from the point of view of this system

if we consider

Well, the concept of "may" is in quotes there

if we look at it simply

there is an information object there

Human

there is an information object

chemical element

and chemical element

tries to harm a person yes

to another information object

here is a confrontation going on in fact

between two systems

elements of information

and now we need to study this property

i.e. it needs to be considered directly

i.e. to look with direct vision

what is this system

and generally speaking in any management

It is important to consider of course

element of interaction for example

and if there is some kind of counteraction

then it turns out

that these are precisely the main vector lines

which are going in your direction along an unfavorable line

you need to be able to see them

and be able to counteract directly

i.e. see that the main glow is coming straight at you

i.e. and it really is so

if there is a chemical harmful element

it affects the body

then this is a direct impact  
on you  
on your personality  
there on your physical body

it's like well, let's say, a type of direct influence  
therefore it is necessary to consider  
where is this impact  
at the level of, as it were, personal aspects of management

and that's when you saw the control  
then you can see  
how does the external system work in general

for example, if a person has  
well, the practice of a certain job  
for healing  
if the disease is considered yes

that disease is often more there  
some kind of complex system maybe  
in the form of temporal aspects  
in the form of elements of connections, reasons, etc.

in case of chemical exposure  
as a rule, the system has a simple  
very large volume of information

and here is the system recognition  
this is volume detection

i.e. here is the external glow of this information  
looks like this

what if we consider as if the elements of light  
which are chaotic like bees conditionally  
move in some volume  
and by the way, the characteristic sound exists  
well, no way let's say in secret hearing  
so as a certain element a set of such buzzers

you have to determine this place  
where is this information located

i.e. if there is a system of harmful effects  
it doesn't necessarily mean that it's right here

she may be located  
main active site  
just from the point of view of counteraction  
information systems  
may be located at a distance

although the main block is as if it was revealed  
in the form of light elements like these  
which have a certain vibration  
The buzzer type is closer to this one  
some kind of technical buzzing

i.e. you still need to determine this place by ear

and once you have determined this place  
Do you understand ?  
the system has locked up

It should be borne in mind that the information is from an external system  
i.e. a harmful chemical element  
is fixed  
when you determine almost exactly  
as if a configuration in dynamics

i.e. there is nothing else  
usually chemical exposure  
it's very similar, well, it's just different  
there are two or three main impulses  
and that's all

i.e. there is no need to look for anything new there  
It is enough to simply consider the basic systems  
which are the most harmful

and that's when you start looking at it  
further to the most basic level of management  
is  
find your own forecast base

i.e. to see your own events in the future

because in the control system  
well, counteraction to chemical influences , let's say  
we need to be clear  
primarily with the design of predictive control

because the chemical element is quite dispersed

and concentrate attention  
constantly knocking out some element there  
from some environment or from water  
it's very difficult, it can be long , for example

so you can do this for the first time  
when the active phase begins  
and later when there are already some micro-substances  
but they can also have a negative impact, for example

so you need to act in any case  
even when the active phase of influence  
possible chemicals  
we need to see that section of events in the future  
where you feel normal  
i.e. you are healthy

in this case the definition of this event  
this is a dynamic characteristic  
you need to see the information clearly  
where are you alive and well  
and how does this control move?

i.e. you must see the element of your Consciousness  
which includes all the structures of Reality  
i.e. your personality  
physical body  
information of the physical body is meant  
or any other aspects of your actions  
but first of all of course  
namely the information of the physical body

so we came to this  
what is the information of the physical body  
this is a special area, so to speak, yes  
you could even say a certain point of information  
right means well so to speak, moving  
or there distributing which  
concentrating which

you make the impact inaccessible

and it turns out that what is needed here in this mass of information  
here you have it  
from the point of view of, let's say, an opposing system  
some chemical element

there is a system of many structures of light yes

even if it will be there, well, very there  
some harmful element  
anyway, it has some place in the information

and now if you start separating your information  
i.e. to lead away from the point  
with, well, in general, some kind of systemic concentration  
of this substance  
you can even see it here  
you need to learn to see  
how does the external substance move

i.e. you will have to constantly observe for some time  
where is the substance in the information

and either due to management already  
push away from oneself  
i.e. you don't have to move your element of Consciousness

here from the point of view of God in the element of Consciousness  
naturally there may be information  
physical body  
Souls  
for example, the Spirit, etc.

so we need to keep this in mind here  
what is the concept of "movement"  
this still means something on a physical level  
well, there is some concept close to that  
how does the level of resistance happen yes  
impact on the system so that it is not harmful

i.e. it is an active process

and therefore at the level of physical processes  
Well, you can try not to react to that  
that, for example, some external parameters change quickly  
you are in control there at the information level  
and try on a physical level  
constantly well let's say watch  
on your physical body through a reflected signal

i.e. the method is as follows  
the physical body radiates  
some means informative event signal

this is not an aura but just a normal version of <sup>so to speak</sup> information  
which corresponds, <sup>for example,</sup> to the action of the physical body

it looks like it's usually light blue there  
with some lighter shades  
level

and it is a generalized level  
i.e. this glow goes on at the same time  
from the body  
Souls  
The spirit of man  
Consciousness  
and not from a separate element of any  
corresponding to the personality of the person

and here is the signal that is coming  
it must have the property  
that in this signal you understand what is happening with the body

i.e. in this management you must clearly understand  
what happens to the body  
at any given time <sup>there are</sup> microseconds, etc.

but time has a physical meaning not only there  
<sup>suppose</sup> microseconds <sup>yes</sup>  
and it has the property of continuity

i.e. you need to achieve that  
so that the physical body  
was under your control at any given time  
even if we consider  
time as a quantity  
which is developing, <sup>for example,</sup> in the direction of continuity, precisely here

there is such a control parameter  
i.e. the person is , <sup>so to speak,</sup> practically healthy  
when his time develops  
towards the continuity of time there  
for the organism itself, one could say so

then it turns out that we have here in this case

the following control structure

Firstly we move the element of Consciousness  
so that he would not be exposed

some kind of external negative reaction  
negative impact

in this case it is necessary to consider  
any chemical elements after all  
harmful in the first place

because from the point of view of Macrosalvation  
we need to achieve that  
so that there would be no bacteriological warfare there  
or there is chemical damage  
using weapons of mass destruction there  
where is the chemical element

i.e. all connections need to be considered

and then later, when there is already a specific characteristic  
what is in front of you  
try to diagnose and determine anyway  
what kind of substance is it that affects you anyway  
can act yes

but on the information it turns out to be an active substance  
it tries to act as if yes  
on your health, on you personally, etc.

i.e. you already have enough worries  
you are also forced to be distracted by that, for example  
to neutralize some chemical element

and we need to take this into account  
as a system that exists  
in the system of connections  
not because there  
some waste was dumped somewhere from somewhere  
or there was a possibility of an accident or explosion

because a system arose  
which begins to influence you

so it turns out that you should  
neutralize accordingly  
there is a negative influence of the system

i.e. we need to consider it in this way

system of connections

here, for example, is the element itself that is located there  
it's clear that it was activated there

preliminary situation of some accident yes

then look at the links  
look at the structure of the Thinking of all people  
which had any relation at all  
to the primary system of this accident

i.e. why did this situation arise  
and look at the whole life story of these people

see all systems of Thinking  
who were there for example from birth  
or from the creation of these people

i.e. why did it happen this way  
that as a result of, for example, that  
that some engineer overlooked some signal  
and there was an explosion yes  
who was responsible for this anyway

i.e. we need to find these people  
not because it is about what is needed  
to highlight in some way  
let's assume some negative phase

on the contrary, you need to try to understand  
or there to help these people try to understand  
how did you get through them  
this is the system for chemical problems yes

i.e. it works here too  
that they are like some links in a certain system of connections  
and in this regard, you need to know absolutely everything about them

here in defense against terrorism of any ecological terrorism  
you need to know absolutely the whole situation  
which is connected to that side  
which could be a source of terror

and that's why here first of all  
we'll have to follow up, so to speak  
the entire system of Thinking

which accumulated the negative factor of this situation

and bring the structure of Thinking to the level of the Norm

i.e. by the way, it's done very simply

anyway, this is information from the past

i.e. it will not affect the characters in any way, so to speak Yes

on the contrary, it will improve their health

they are also people who suffered

you just need to consider it

vector of movement of Thinking

here is a negative factor

i.e. to look

why Thinking is a negative factor

it manifested itself in its time

for example, what did these people have there?

in the structure of their Thinking

so if the language is different there yes

try to see straight Thinking in another language

and then translate

at the translation level for example there Well, into Russian

well, in the language in which you perceive, etc.

so here it turns out

that it is important to see the details generally speaking

shades of language

in the structure of Thinking

has the meaning of vibration of tone, semitone, etc.

irritability

maybe it's a generally loyal thought

but there is irritation

and the signal goes further to the specifics of the activity

i.e. means to view all all moments

which were related

to the structure of the organization of this situation

and then simply mechanically geometrically

as a rule it is revealed

how to take for example

well the same teardrop shape yes

but vice versa

there let's say the development of the drop itself is down  
as usual by gravity

and the tip of this drop is like a cone-shaped system  
this means the top of the cone is twisted  
in your direction

you just need this top  
mechanically restore and align to normal  
along a vertical line

the main thing is to achieve verticality  
processes of standardization, so to speak  
space-time

i.e. consider the structure of connections  
take maps of the area and look at them  
structures as they should be along vertical lines

and this is where the change from the vertical level comes  
seek rationing  
i.e. bring the structure back to normal

and in connection with this  
here it is also important to see in the prognostic phase  
how then do you proceed further  
develop management for yourself

here is a man who lives  
at the predictive level of control  
i.e. he understands that control is taking place  
due to the same prognostication

such a person begins to learn to see  
in general, all connections of your body  
for example with all information systems

then it turns out even easier  
you can see  
it's not just that there is some negative level there  
and you can restore control in advance  
i.e. well, bring it to the norm  
prepare the body for that  
to overcome some situation

and this is the concentration system  
to overcome some situation

she's already being transferred  
on the structure of the physical tissue of the body

i.e. if in the first case you looked  
element of Consciousness  
and moved to overcome control

then when we are talking about the human body  
you need to do it this way  
so that you can see generally speaking  
all connections in Reality

i.e. how is the organism formed in general

from a physiological point of view  
i.e. to be at the level of understanding  
awareness of that  
like the human body i.e. well yours first of all  
in this case

but generally speaking we are talking about any person  
How is an organism created?  
how is he in the information field  
Well, it's moving and developing there.  
how do these connections occur?  
where the organism is created in the movement of, for example, your Thinking

such a simple task  
if we take into account your thought  
and look at one thing  
when it works just  
you decided to go to the store and somewhere

thought has a local form  
it works like a spheroidal region for example  
which basically moves  
for example in the direction you are going  
in the space of precisely management

and if you work  
from the point of view of creating an organism  
those. constantly increase your action resource  
when you practically realize the organism, so to speak  
can you give me a phrase like this  
then a person stops aging, getting sick, etc.  
overcomes situations

i.e. this is a certain state  
when you clearly understand  
what needs to be done to be normal

then the system of Thinking turns out to be like this  
that the thought is  
actually inside the physical body  
that's the difference

that's when the thought, i.e., is connected with the body together  
in that place you can visualize the thought  
where is the physical body

and in this same place you can see  
action of the Soul for example Yes  
Spirit, etc.

and then it turns out that we can technologically understand  
in which case we actually create the organism  
in reality this is the process of creation by the way  
and such a clear and direct one

or we use what has already been created yes  
and we think, for example, from the point of view of how  
Thinking as an investigative process  
the only difference is in the position of the thought itself

and it turns out that if we  
from the point of view of when the organism is created  
and the thought is found  
for example, in contact, let's say so yes with a physical body  
in fact, it is like one of the types of body glow  
then the thought looks like

then it has the property  
enough well as if a greater degree of penetration  
into the human body  
so to speak, interactions with human tissue

i.e. a more harmonious environment  
and the thought is not revealed as a system of rigid parameters  
i.e. the person knows what is happening  
well in the area of harmony  
he is confident enough  
he just knows what he's doing  
but at the same time he doesn't seem to think through the situation

some kind of automated knowledge , so to speak

in essence it is Thinking through the tissue system  
i.e. Thinking is not some separate organ  
and the system of Thinking that is reproduced  
through the cellular structure of the whole human being

then it turns out that at the level of thought  
you can of course bypass the chemical element  
i.e. just to admit the thought  
that you take and bypass the chemical element

then such a chemical element does not reach you

i.e. either you timely  
Well, the most simple mechanical element  
you understand that you don't need to do anything, right? let's assume  
and then you understand why  
for example, toxicity is increased there

and the second element you start working  
now you have time  
you start working you start neutralizing

and then if you still have to use it  
Well, there are times when you need to use it anyway  
with some object and some water, etc.

and at the same time you diagnosed  
that there is some kind of harmful chemical impurity there  
then it turns out you need to do the following move

first of all, highlight  
axial system so to speak of harmful substances  
it doesn't matter where

on clothes in water anywhere  
it is necessary to select the axial spectrum  
it's basically like a lit line that exists  
in the form of such a specific glow

and inside this axis  
quickly enter your well, like an arrow  
control impulse

i.e. it is necessary that inside this axial system  
there was your kind of hinge system

i.e. what the axis rests on  
in fact, it is your control

then in general you should naturally check again  
that you removed some harmful real elements  
for example from water  
and then you start drinking this water yes

but considering that the water was still like that  
that you saw some harmful properties

you will need it later  
still trace each element of this water  
where is it located in your body

and if necessary

remove the remnants of this information from the human body

i.e. you need to constantly monitor  
the following parameters  
if you encountered a situation somewhere  
that contact with the harmful system was

then we get tracking  
consequences of this information  
it might still take some time

not only once you disbanded  
and got a neutral environment  
It can even be measured in a laboratory  
and in general there won't be any problems there  
you really, for example, convert the water to Norma ?  
management

but still, it is an optical control level  
it is a wave process  
and the information is stored somewhere  
properties of negative parameters

and you need to find where it is in the management  
i.e. on which cells of the body  
could still be reflected there, for example  
and these cells are simply brought to the norm  
in information

i.e. these cells will of course be completely healthy

it's just a question of what else you should do  
work with information  
after the action of the so-called harmful system

after you have already withdrawn  
there is nothing more to worry about in this regard  
i.e. you kind of checked

for example, they brought it up to the norm  
the management information itself  
and that's all  
then you can already well how to act  
already with accumulated experience

but there is one such control here  
here with chemical systems of destruction  
human body  
each next element  
it takes into account everything that has been achieved

here in experience and by man

you just need to be able to stretch  
to the next level  
somewhere considering my experience yes  
that you were able to neutralize earlier systems  
possible damage to the body

but somewhere you still need to act situationally instantly

i.e. external system  
which is like a counteraction system  
affects the body  
it works like this

that at first it is manifested more vividly, so to speak Yes  
but when faced with this system  
what did you neutralize  
for example, harmful aspects of action  
she begins to change

i.e. with the same concentration of control, by the way, yes  
with the same management motives  
there is still a decrease  
generally speaking, the environment itself

you need to be able to see

where is the management environment

here is the control environment, it is decreasing  
and becomes vertically lower

i.e. each subsequent option of interaction with the system  
fills it with great weight

i.e. it is necessary to keep in mind  
that at the first levels of neutralization  
to further identify the system  
it may be below  
and the density is like the specific gravity of this information yes  
there may be more

although it is more inert, it means it is less harmful  
it turns out  
but nevertheless you try to determine  
such a situation  
that even there the system is not very active  
Well as if it does not have it  
some properties of self-organization

so from the point of view of external control there

however, it has the property of execution  
is no primary impulse of action

if we distribute the situation like this  
that there is a man  
and there is something that is harmful to humans

then any chemicals  
which are produced for various reasons  
but if they are harmful  
this is the component of possible harm  
it still exists as a property of the system

and it turns out that we should see very clearly here  
that interaction with such a system  
this is a certain kind  
some kind of so to speak, a kind of unique struggle  
in fact, it is often like a direct fight  
at the information level  
where do you bring it to a neutral level  
any system

by the way, this also applies to the general situation  
to the fact that there you can counteract  
any kind of possible terrorism there

it's just that the investigative systems may already be different there  
another type of possible action

therefore, it is important to find system-wide approaches here

i.e. not because it is some kind of chemical element there  
or some other situation  
the human body in general  
from the point of view of Eternal development  
must be protected from any harmful influence

and therefore from the point of view of the structure of the World  
in Infinite Level Control  
here it turns out that it is exactly what is needed  
I count periodically when you have time  
consider the process of system plan

that's why this system worked the way it did  
and where is your control located now

i.e. trying means perceiving information in this way

that's like asking a question  
why does such an action happen at all yes

and from what incentive structures  
of this external system  
this situation has passed

for example, you were involved in Macrosalvation there  
you help people

and when the counteraction begins  
then how does this happen

for example , you need to stop it periodically  
management process and look around

stop not just as if in the form of a hard stop  
and pause it so there are less noise effects  
information watch observe carefully

if there is at least one harmful element

which may be there in a million years  
it can be harmful yes

but somewhere it starts to filter again  
we need to find its trajectory  
study with the same quality with which you study  
any complex system

i.e. if the control field requires it  
it must be completely cleaned  
from any harmful effects

so when you  
such a cleansing was done  
further on comes the management in the Spiritual sphere

i.e. what I said now is more about management  
through the structure of Consciousness at the logical phases of control  
there is a certain optics of light, etc.

i.e. here we need to keep in mind  
that it is often necessary to counteract at a logical level  
Well there are the most active systems

i.e. logic gives a rigid, as if fixing, counter-control  
and then the control just goes faster

and now in the Spiritual sphere

you start working as if filling niches  
where did you do the work

this is already the next level of work  
i.e. you visualize the spectrum of Spiritual control  
and transfer this control  
almost at the level of those niches  
where are you  
Well it looks like this  
that areas arise

which you kind of squeezed out of yourself and put them aside  
harmful areas there chemical exposure

and these areas  
between the physical body  
and information from the external environment  
they are like well they look like they are unfilled

from the point of view of Spiritual action

because you worked more on logic  
it turns out that Spiritual action needs to be introduced

how is a chemical formula constructed  
it is built on the level of logic  
and some processes there, for example  
which can lead to a reaction yes

so here it is the same  
you must actually know the properties of that system  
i.e. should be at the management level  
be able to synchronize your actions

so you fill with Spiritual action  
and then the effect of the Soul status begins

i.e. here, by the way, there is  
one such unique control parameter  
i.e. logically, as it were Well, let's say, speculatively, we can say  
that it would be easier like this from an analytical point of view  
act immediately with the Soul

and then it turns out that the Soul still brings control back to the Norm

but the chemical element is not visible  
here at the level of, let's say, visualization often  
physical vision

therefore the Soul is already acting  
in fact, in a proven system  
absolutely pure information

here we must take into account that the Soul should not be subject  
for example, the primary level  
there is no chemical exposure by the way

here is the important element  
that the work of the Soul is carried out in the area  
which is completely calm, pure and cleansed

from all controls

then this is generally a fairly specific guarantee  
that the body is located

outside of any chemical control elements  
external yes

and the Soul controls  
at the level of logic or the mind of the Soul, so to speak  
intellectual mind of the Soul  
i.e. the subtle mind of the Soul  
controls the body from the inside as if

Well, here you need to see clearly  
what if you ask in this case  
where is the main control of the Soul  
then it is clear that somewhere inside there in the physical body  
or in the depth of the problem, etc.

i.e. it is like internal management  
which guarantees stabilization  
and which is the main guarantor  
if suddenly there is some kind of chemical impulse  
it still starts to move more intensively  
then it means that the light of the Soul arises as if by itself

pay attention here  
the glow of the Soul areas begins  
The soul follows the contours of the human body  
then it concentrates in one point

so there are different positions yes  
that the Soul has either the form of a body  
or the shape of one point there that emits light

and then there is already counteraction  
some harmful element

i.e. the Soul certainly has the property of such a reaction  
but she works it out in this case  
only when all other systems are worked out

by the way, in case of radioactive damage , for example  
possible  
The soul works very well here you can say such a word  
how it "works"  
what we're really talking about here is  
that it is developing

like external information that works" here  
and this action of the Soul is carried out

in terms of more output of this impulse  
along the most complex trajectory

i.e. it means the work is happening , so to speak  
the action itself

where there is work of the external system  
and the action of the Soul

it happens like this

what is radiological harmful impulse

for example, even getting on some fabric

per human cell

is passed through the intercellular level first

if the background radiation is not very strong

and then it is captured by the level of the Soul  
and is displayed from the point where it is located

i.e. the human body is capable of transmitting radiation  
in small microdoses

Well it's clear that the small ones are not harmful

and it reads as if they simply don't accumulate

and in general it is possible to trace how  
how are they skipped  
these elements are radioactive

and so if we start thinking about that  
how, let's say, a radioactive system, yes

as if this is the work of the Soul to neutralize radiation

there are seemingly more complex processes there

there are less fixed ones there

or they are less visible there or they are kind of complex

then we can consider this principle

let's take for example well some chemical element  
with radiological functions

for example, if we take the isotope of chlorine

which is about once every 45 minutes

gives an impulse there

and you can consider

that the chemical element itself reproduces yes

some impulse in the half-life

it turns out that the element of communication  
impulse

and the chemical substance itself

This is a structure that is very clear  
controlled by Consciousness

even at the level of the accounting systems there  
the time is clearly set yes for example every 45 minutes

if we start to enter this system  
and we are already beginning to restrain this connection  
i.e. this impulse does not occur  
then we see the active phase of the influence of Consciousness  
into a two-component system, as it were  
chlorine there isotope of chlorine radiological system  
or just a chemical element

and here it is important to see that if you approach  
in general, there is more logic at the level  
where exactly intelligent systems work  
as search engines  
i.e. to output search engines

when a person thinks about some problem  
he penetrates deep into this task  
into some content

and it may not be difficult at all  
i.e. not to feel any complexity in Thinking there  
that it's difficult at all

but nevertheless  
this is precisely the intellectual search for a solution  
often this is a solution that protects against all situations

i.e. you have to be able to try here  
Well how to define a sampling system  
this is what you need to think about  
and try to think through the situation further

i.e. there is one more simple control element  
if you have exhausted all counteraction systems  
you see that you well in general, they compensated for the situation well

but at your level, for example, there are Souls  
there is some acceptance of signals of future events there

then we need to move on to that  
to analyze some systems  
which practically look  
like systems for example well, let's assume that it's possible that it's not active  
but but with whom you work

i.e. it is necessary to increase the process of Thinking

until you are convinced of that  
that on a physical level everything is absolutely fine  
some laboratory fences are being made there  
and generally speaking, your situation is already completely calm

logical level of thinking  
the level of increase <sup>there</sup> of the speed of Thinking  
It is advisable to keep it until then  
while the entire collective environment  
at the information level it will not return to normal

i.e. here it turns out that it is enough to just think about it  
and find some connections  
which may possibly lead  
to the next event or a similar event  
or do analytics of that  
how can we ensure that such an event does not happen

for example, this is another country  
there are <sup>generally</sup> no legal measures of influence  
it turns out that there are practically no special ones  
and <sup>well for example,</sup> under the guise of some kind of accident  
there you can drain quite a lot  
any such problematic substances

and influence the drain factor itself  
it is only possible situationally  
i.e. thinking ahead  
what else can this system do in the future?

and try to work with this system already  
i.e. not to give it the opportunity to develop in this direction

and that's when you start working like that

then it's easier from here on out  
because you are already compensating  
possible future events  
and mainly work with information from the past

and here is where the factor of working with the past is highlighted  
consists in the fact that  
that firstly the past needs to be recorded  
in the observational aspect

i.e. first observe  
for what happens to the information  
based on your past actions or events

and this is <sup>some</sup> kind of a momentary observation  
if you observe through the <sup>structure</sup> of the verbal phase <sup>yes</sup>  
i.e. you can also work with words

for example, making an observation  
here is the factor of the substance's action  
i.e. you can work even by replacing letters <sup>yes</sup>  
Well for example, "observation" letter "e" after "d"

i.e. we start working  
through extended sound system

work with any access properties  
to increase the structure, <sup>so to speak</sup>, of the observer

i.e. fix the element  
hold the element in control  
somehow verbally, etc.

and that's when you come to that  
what have you learned to scatter there  
this element is possibly destructive there

you see that the knowledge, <sup>well</sup>, that's what you work with  
they are of course continuously transmitted to all people  
try to see  
as you conveyed when you were <sup>working</sup>  
and were focused on the management process itself  
how did the transfer of knowledge to others go

i.e. find these areas  
because in management  
precisely by counteraction  
some chemical elements harmful to health  
here is precisely the transfer of information

as a rule, these are very narrow sections of information

i.e. these are specific transmission trajectories  
look like some kind of communication channels  
which are often not long and are located in some place

i.e. find these areas and make them accessible  
for other people

then in principle, here at the same time protecting other people  
you see that your management then becomes  
for example , there it is absolutely stable or there it is more stable

but in the conditions that the impulse  
as if radically harmful to health

so that it doesn't pass  
you must of course be absolutely stable

so it turns out that the management itself is like this  
what if you for example well you see  
there distant Reality in this way  
what is the system that you see  
built on that , among other things  
that you are learning something somewhere, you are learning something  
specifically yes

you can see it there in Infinite Development  
yourself or those people you want  
you see that there are systems  
which, for example, at any given time  
can be known yes

that is, to achieve some one situation in the future  
you need to learn something there  
let's assume there at the professional level of management

but here it is very important to see  
how will you be able to after you have done  
all these controls  
consider  
and the factor of movement in relation to you  
here is information about your future

and this is where it is important  
precisely when it comes to that  
what is in chemical level  
there is no possible external influence  
you should see the structure like this

so that external control coming to you  
it was balanced in terms of

that any favorable impulse that comes to you  
it develops into Infinity  
because you can, so to speak, initiate this development  
by force of will  
and the impulse coming to you becomes Infinite

i.e. you create the Infinite phase  
your own future  
from the point of view of events

i.e. events can be absolutely favorable  
but precisely the external system  
i.e. this impulse is going into the Infinite phase

and that's when you start to see like that

Well, at the management level it looks like this  
what is actually being built in the "eight"

For example there is a simple way of controlling clairvoyance  
prognostic type  
so that means to consider this aspect  
and this method of this clairvoyance to realize  
you can just put "eights" in the information  
so horizontally, well closer to the "Infinity" sign

and if we start in golden color  
these systems are to be implemented  
at the level of precisely distant events  
then it turns out that we have  
well, practically the next element  
what's logical about it, yes For example  
there is the sign "Infinity" itself  
somehow intertwined with the information of Infinity

and so it turns out that we have this type of control  
what if this "Infinity" sign is located  
Well, that's how they write on paper, yes let's assume  
just in horizontal level

then he starts to act at the level of that  
what chemical elements in the control system  
i.e. it practically cleanses

if we put it vertically for example  
i.e. we lift a sheet of paper  
then it turns out that we see  
more detailed events

if you work with this sign you can see  
system of specific events  
for example, as a chemical element there  
is heading in your direction for example

what specific chemical element  
is moving towards you  
and at the same time you can  
it is this element that needs to be stopped

and further by the way if you do it for yourself

then you can clearly see what you are doing  
for all others

that's why we need to make such control now

you take the "Infinity" sign there  
horizontal  
vertical

and take there something close to the number "eight"  
and try in the intersection structure  
just see  
an element that moves towards you

and due to the simple movement of these "eights"  
neutralize  
i.e. you can work with just one number "eight"

because in the Infinite development in Infinity  
everything there is quite specific and canonical  
i.e. it is clean there and therefore we should try to work  
namely the Infinite quantity

You work now, I'll work with you  
and specifically for your task which is now in Khabarovsk

when you work do this kind of management  
work right now according to the situation in the hall for example Yes

i.e. cleansing not only from some possible harmful substances

i.e. just work to remove the toxic phase

example, for detoxification

to remove any toxic systems

which are present, for example, in your body

or the people you will work with

i.e. just work specifically

for their own purposes, for example

there is a team in the hall

here's straight to the team's tasks first

and here we also need to keep in mind

what is the toxicological effect

when exactly the toxicity phase is possibly high <sup>yes</sup>

or is there a bacteriological effect?

then a person is forced to immediately react to that

that he should make protection for example there of his organism

here is the phase of Macromanagement

that is precisely what is included in the possibility

your body for self-defense

i.e. the ability to concentrate control in this way

that you are making the right decision

and it is this information that goes, for example, to Macro Access

It is she who practically solves the issues of Salvation

because the right action there is fast action

this is a very important value

counteraction to chemical elements

human defeats

and in this regard it is important to see very clearly here

what in such in these conditions

an important element is the speed of reaction

i.e. a person must actually instantly

even at an accelerated pace

more than <sup>yes</sup> react instantly

for possible chemical damage

because it's a chemical attack

it is often or very fast or unnoticeable

if this is done well For example there is one of the factors  
in case of use in terrorism

for example, this is done consciously by some individual yes let's assume

then it turns out that here you still need to be able to recognize  
his Thinking  
with the chemical element itself

i.e. how is Thinking connected to how he plans actions  
and how he tries to introduce let's say yes, it is a chemically harmful element

it is also important to see here  
that in case of some kind of accident due to carelessness  
this is one stereotype of thinking  
there it is enough to simply bend the controls to Normal

and if you are interested in it  
Well, let's assume third parties Yes  
then it works out  
that here then we need to work differently  
need to watch  
how do they initiate this structure  
what happens in this case yes

if there are any losses  
who might benefit from this, for example

and see  
Is there, for example, a special system there?  
here is the development of such a course of events  
i.e. in terms of strengthening there in terms of means well, the location  
it's a common investigative practice there to find  
those persons who may benefit from it

and then there is interaction with individuals  
who act consciously

such an element that a person acts consciously  
Well as if aggravating, as if dragging out this situation which

because in the collective Consciousness it is necessary to do so  
so that it was rarefied this situation

and then it turns out that if we consider  
well from that point of view  
that maybe there is no insurance option there yes

or an insurance event

well then for example we are considering  
what categories are possible at all  
which can support this information  
in the collective Consciousness  
after all, everything holds together in the end  
on the system of collective Consciousness  
any even chemical element  
where is God's Consciousness included

so it turns out that in the collective Consciousness  
where is God Consciousness  
we can generally take this volume

which corresponds  
precisely the reproduction of these systems  
and see how everything is connected

i.e. for example at an earlier time  
someone deliberately used it against people  
there are chemical destruction systems

to consider the whole structure of their Thinking  
it's not long, it's three seconds  
you already have all the information, maybe three seconds at most  
i.e. try to work quickly

and look at the central points  
what motivated their earlier actions

who used chemical destruction  
there against people  
i.e. where is this information geometrically located?

often it is not even necessary to have a motivation  
because sometimes the system of motive itself is not important, so to speak  
and in this case it is important that the system of active actions  
is in the personality of a person

then it turns out that it is important to work here  
well, for example, in case there is  
some kind of enemy just exists there  
he should control then

and on top of all that  
as we do Macro Management Macro Salvation

the enemy still needs to be given there  
necessarily favorable events  
good health

and in all these situations he must  
not have time to cause some harm, for example  
your body

i.e. here we need to proceed from the following  
what you need to be able to do in the management system  
do significantly more apparently  
control impulses so to speak Yes

your control system must be multi-pulse  
for example, in the case of terrorism using chemical elements  
if a terrorist is a person  
and he means he uses it

some chemical element  
or bacteriological

Somehow information appeared in the press  
that someone is using injections  
there are just strangers there  
pierces with some injections, etc.

and so let 's say there is some evil intent, yes  
if we consider

and then it turns out that here we must understand  
that under the conditions of this management  
you just have to do it  
as many stabilizing impulses as possible  
here first of all, as if an external system

where is the element of Thinking of this person  
with some evil intent, let's say

and the second is naturally tracking  
your personal position in information  
so that you don't get hurt  
you should try harder already  
Well, some logical measures need to be taken

i.e. try to bring out  
at the level of well, as in any system  
under the legislative framework, etc.

but the thing is that chemical elements are not visible  
and prove that the person there used it against someone  
some chemical element  
quite difficult

we need to use some laboratory methods  
quite can be also complex

so here first of all it is necessary  
so that such, let's say, a person with such evil intent  
current  
did not cause damage  
then you need to control  
literally every structure of this personality's movement

i.e. in the first case  
when the external chemical element is as if passive yes  
it exists in the form of a simple chemical element

and then you are in control  
my whole personality, so to speak Yes  
all your information

if the attacker is active himself  
then you need to control all his information

and here is any modification of its information  
need to be taken into account  
and take into account that this modification can be directed  
example, so that this chemical toxin  
introduce into someone's body

so here when we look there  
some chemical stain in the Amur  
we need to consider  
that these elements of Thinking are possible

formation is well if so at the level of action let's assume Yes  
consider  
maybe it's just here  
this is the action of forming this spot  
of course it has some more extended terms  
there are reasons

but it is precisely the formation of the spot

where there is an element of external sign  
in the collective Consciousness  
where was it done specifically

and here's how I said it  
if for example we take a sheet of paper for example Yes  
and let's consider such a construction there, let's assume purely speculatively

if the formation of this spot  
for example, write it down in writing

i.e. take a spot and paint the figure eights there  
some intersecting  
look at the impulses from them  
look  
what is the system of configurations of "eights" in space  
for example in the stereometric version  
reduces this stain

then you can basically see it here  
so from the point of view of the written approach  
something if you write on paper  
how a stain is formed

if you don't write mentally and work just mentally  
then it turns out that how does the work go then

because any delay in control  
this is immediately a fixation of the external system of your statics

as I said in case we are considering  
Well in general, the whole set, yes it turns out events  
in relation to pollution  
then it turns out we can consider  
in a faction in the collective Consciousness  
that it is also possible that there was malicious intent earlier, yes

and this is the consequence  
which formed in the collective Consciousness  
this particular area

then I show the methodology  
how should this be taken into account

for example, I have it in my forecast  
at the eighth extraordinary congress of the DRUGG party  
there was a task

namely counteraction to chemical influences  
just right for the region

and here the method was like a projection  
i.e. you can use methods  
not specifically working there in this area of the plane

or maybe a projective version  
move the projection to another location  
and work through it calmly

and here it is important to identify  
which phase in the collective Consciousness is more involved  
i.e. neutral substances but harmful <sup>yes</sup>  
where the system "substance-system-human" works

some initiators are so passive  
who, through carelessness, allowed  
or due to unprofessionalism  
accident

and the phase present in the collective Consciousness  
where was it done specifically  
well, for example, when chemical weapons were invented there  
or people who do it for that  
to influence other people there

then it works out  
that we reveal all possible contours  
in this phase  
and we start to actually remove block <sup>by</sup> block  
from this <sup>well</sup> constructed level  
in the collective Consciousness

and we are already beginning to see  
as soon as we reduce  
so for one such block, <sup>so to speak</sup>  
the concentration is already decreasing

this can be clearly seen there at the management level  
i.e. you need to see all the cause-and-effect systems  
including as I said  
the interest of some even neutral persons there

which may be <sup>well so let's say</sup> at the logical level  
everything is pretty calm  
but at the level of their actions there

maybe they might have some interest

i.e. we need to give everyone positive events  
so that they have no interest in pollution

i.e. to explain what is at the level  
disbandment of these elements  
still work at the level of life on Earth  
and therefore for life on Earth  
there is no need to create any harmful substances

so it turns out that it is very important to identify here  
what we have in fact

Well as if the next one so to speak yes control system

that revealing one phase after another  
It is important to identify  
that often this is precisely the worsening element  
there accelerating the harmful properties of the system  
is that in the information there is  
it is precisely this harmful effect on other people  
through chemical systems, including

if for example there is just terrorism there  
i.e. the terrorist decided to specifically use  
there are funds of this nature

then it turns out that in the properties of terrorists  
the systems are still in place

there is the bringing of this substance there is the production, etc.

i.e. it needs to be viewed from the point of view of anti-terrorism  
all possible aspects  
this is precisely the development, so to speak, of this management

i.e. we need to try to understand  
all possible motives of such persons

on the one hand there may be a motive, it is not needed  
there it can be completely different

but on the other hand there is such a practice  
what can be taken and realized  
all possible motives of these persons

so then it turns out that the system of your actions

i.e. the system means

Well for example, there is health improvement and restoration of health  
then it will look like a correct reaction system

here is the correct exact reaction

this is practically the case

well, quite a good level of management

and it turns out that if we, for example,

this level of management

so if we have this level of management

we enter

as a way of human reaction let's assume

then your reaction turns out

must be absolutely unambiguous

i.e. for example, you work as a system of a system

but at the same time all external information is full

let's assume how a person works with personality yes

personality is an absolute control system

i.e. all communication systems are there

Well, here's another person

but the personality is initially harmonious

and here is the derivation of the situational structure

let's assume that an event happened

for example, there was some kind of leak there

chemical reagents in Amur

but from the point of view of personal factors

if it is a random variable

then work with another system

manifested as work, for example, too

with a fully developed system

such as Well, a system that is possible by properties

this is how it interacts with personality

that another system personality

there is no other way, as if it were a harmful option, it doesn't lead to anything

here we need to open the system completely, so to speak Yes

there is interaction

personality with personality

for example there is positive interaction

and is there interaction somewhere in another system  
for example, there is an element of collective Consciousness  
that the individual can work actively against

and then it turns out that here we still need to work on it  
everything that was in this regard  
work through the entire history of information  
and eliminate these control systems

for example, how to exclude it altogether  
so that from the point of view of terrorism there  
there was no terrorist attack anywhere

if there is any information about that anywhere  
that some kind of weapon was used somehow  
then it turns out that this can work  
this is exactly the information

and here it turns out that we must then  
take and block  
how to exclude all information about the use of weapons

i.e. here it turns out that it doesn't matter  
this is exactly the action of exclusion  
the mechanism of action itself  
it is often an objective action  
and often it is even necessary

i.e. the ability to exclude such a factor  
there for example so that the weapon could shoot  
you need to pull the trigger  
if you don't press it, it's considered that it doesn't fire, for example  
i.e. it means blocking the trigger release, etc.

i.e. how to work it out simply according to a logical scheme  
I often have to

and then it turns out  
what is it from the point of view of these microelements  
it is also very important to consider  
work on a logical scheme  
that means those systems that surround this element

example, here is a moving stain of dirt  
along some shores

but there is also a chemical element along the coast

and you need to be able to do it like this  
stretch connections  
from these elements by levels  
also some so to speak counteracting systems

i.e. take an element there, let's say silicon Yes

withdraw through the crystal system  
to the vibrational level  
this silicon  
well , it's neutral, the element is not dangerous for humans

i.e. and make it work  
the system also pauses for example there  
movement of this polluted area

i.e. the use of terrain elements  
using internal so to speak communication systems  
where you can practically do it like this  
what to enter control impulse  
into some crystal on the shore  
fix this area  
and then when moving, for example, there are already spots , so to speak  
beyond this polluted  
a specific section on the bank of the Amur is already in operation

and it turns out  
that it is important to highlight such areas here  
and remember their places  
at the information level  
or there physically if you know this place

and then the work goes on, not only yours, for example, yes  
not only those people who work in this department

and other parts of the external environment are still working

in relation to the dangerous object yes  
for human health

and by the way it is quite a convenient system  
you can put some light filters  
passing which  
the concentration is already falling sharply

and by the way, here's an experimental way  
such works were done on rivers  
i.e. if filters were installed  
significantly decreased  
there is activity of hazardous substances up to neutral ones  
there already on a more distant course of the riverbed

so it turns out that if we tie such filters  
at the information level  
and we place them specifically along the riverbed  
then they work as a water purification system

They can be tied optically as I said  
for the elements of the coast  
or you can simply install them in the form of optical systems  
and see what it means when water flows through this place  
there is dispersion for example there are harmful substances there

i.e. it is such a direct mechanical method of work  
in management  
but it is often effective  
with some practice  
it provides almost complete neutralization of chemicals  
what is important there is only the concentration of the collective  
Consciousness

and here, in general, again there is a collective Consciousness  
works out in this way

that there are people who passively help of course  
For example, they don't know that it is possible to influence through  
Consciousness  
to some area of external Reality

and therefore when there is no active phase  
that their Consciousness works  
maybe there is only partly yes

if a person knows this and one of the groups of people  
I even advise taking some areas  
and work through them directly

and then of course it is incomparably more powerful

management is in progress  
that the filters installed there, for example, are speculative, well, some kind of filters  
they are already turning into

into the system of real matter control

and in general then it's already appropriate  
when it is already possible even directly along the river  
measure there carry out work  
and measure after half an hour  
where could this pollution be ?  
which was half an hour earlier where the work took place

it is possible through such experiments  
even see how much the concentration decreases  
or it is brought, for example, to the Norm, etc.  
already specifically at the moment of concentration

i.e. you must try to ask only one question  
what is the substance that goes  
it should be neutral

already upon arrival, for example, in Khabarovsk  
should not cause, for example, deterioration of health in people, etc.

and although there is micromigration  
i.e. there is still a scattered phase in front of the spot  
which can now, for example, yes in microdoses  
it will still have a negative impact there

therefore it is necessary to consider  
in general the entire period of such connections  
that there is some problem there, pollution has arisen  
at this point it is necessary to immediately build a counteraction system

i.e. first the control is introduced  
that the event itself does not happen  
i.e. the event is minimized after all  
this level still needs to be completed  
past management

then immediately from the moment the problem arose  
another level of control is being created  
this is already from the area of universal control

that the stain is growing there, for example, at a slower speed  
or it means it goes into neutral phase faster

and then you work locally  
by all the characteristics that I mentioned

i.e. it is necessary to go even further  
when do you work  
I just showed it on purpose  
for example, with a full control package there  
which copes with the task  
you can continue to find the following items

Well let's assume that there is an installation of some filters  
at the level of filtering information  
some specific areas  
which can even be checked later, for example Yes

and in principle I think that here  
the problem is only in the number of people  
who work in this area

and in this regard we can consider  
another element is completely practical  
as a method

This is a method of using internal ice crystals

i.e. it can be configured in this way  
light inside ice  
deliberately choosing the route of light  
so that purification can take place  
from harmful impurities in the Amur water  
also one of the methods

another method  
this is the use of air information reflection  
on contact with water

i.e. air is one environment  
naturally there are different physical processes going on there , yes

so, but at the information level  
to combat harmful substances  
it could be a uniform environment

both water and air can reject  
chemically harmful systems  
and therefore the following method is based on  
on the principles of simultaneity of counteraction of different systems  
for example plants water air

and here it is being built if it is water and air

so to speak plates is built on the surface of the water  
which have reflective light  
action  
i.e. it seems like this  
did you put some of these silver ones  
silvery-white half-plates  
and sunlight is reflected from them  
it is not necessary for there to be sun  
can you imagine it

and here from the reflected area of the sun  
i.e. the beam that was reflected towards the sun  
but it was reflected as if at an angle  
it's not the same beam yes  
he doesn't go inside there is a ray that came from the sun

and here is a coming beam  
you can put it from it  
directly specifically to the physical elements of harmful substances  
some, well, some kind of optical stopping systems

this is the next control

so the meaning here is like this  
that air comes into contact with water  
forms a visualization system

i.e. for example air works here in this case

just as a demarcation parameter  
water as a reflection system for example yes, a ray of sunshine

the next element is like this  
what is taken, for example, a plant leaf  
mentally imagines  
and the movement of water is considered  
well then somewhere in the capillaries yes  
here in the sheet itself  
that means somewhere in the structure of the leaf tissue

and such a management model is established  
from the point of view of access to, for example, a harmful substance  
in this area of the sheet  
there are many different systems there, yes

and so you just need to take it  
and how to block the access system

in this sheet  
harmful substance  
and then transfer this system  
well, in the form of a sphere of information  
and transfer this system directly specifically  
well, on the section of water that you want to clean  
i.e. first find a way to protect the plant  
and then you actually transfer this element into water

the next method is like this  
that you should consider the management structure  
when at the moment of action of control from you  
you can have your impulse which goes for example  
in the form of an impulse of light or an impulse of Thought  
consider  
how does he interact with other people  
i.e. each person has an optical phase of control

and that part of the task that is common  
for example resistance  
say this to a harmful chemical element  
this part of the task as a general one is highlighted in the information

and is transferred again to the area where it is necessary to counteract

at the same time to the person who has this information  
and now for example in Khabarovsk  
all people have such resistance information

then you need to send a proposal  
track the action of your level of Consciousness, yes  
where do you actually show the path  
that you have examined this area

and then the person who took the impulse  
he can either move his element there or not move it

but the accumulation of experience in this case is very large  
because even if some people there start working actively  
then practically even in the future  
there can't be this type of accident there

i.e. the future spectrum of events is pushed back  
for the structure of the Infinite Development Plan

and here for the Infinite level of development  
for the Infinite Life of Man

he must always guarantee  
no matter what happens around him  
the fact that he won't be affected is real  
some kind of harmful system

so it turns out that it is important to see here  
another, so to speak, personal management plan  
where should you build management

well, according to this principle  
just like God does  
from the point of view of the massive number of processes there  
happening around

organization of any element for example  
It turns out that he does it from the point of view  
and external action  
in terms of how the element will manifest

i.e. if in a chemical element  
consider an element of organization  
i.e. what is the element itself ?  
how to fix attention

and then consider  
how does it develop at all

i.e. fix two points  
he is also becoming narrower  
if at a good glance, as if from the right point  
it becomes completely harmless

i.e. and with a lot of experience it can be brought to the norm  
just a point of view  
this is where to look in your case  
i.e. how to bring out the light

the beginning and development of the process

because from the point of view of development  
all elements of the world are created by God  
not dangerous to people  
here is from the original idea of management  
from God

it turns out that it is important to see here  
system of technical connections

which provide this postulate of development

and the next method

you need to look as if infinitely into the distance into the horizon

here is any system that occurs in life

should lead to that

that a person must gain some experience

from the point of view of Infinite development

and here is the Infinite system in this case

gives exactly this option

although the main task

to prevent any negative systems

nevertheless, all the time increase the status

personal for example there is Infinity of development

namely personal Eternity yes let's say so

and here is such a technology

you look forward

with his Infinite gaze

i.e. it is visible as an optical, well, sort of canvas

which is placed as if on ice or water

and the element that is reflected from the water

you need to imagine that instead of steam instead of light

the chemical element itself rises

then when lifting and reflecting

at the Infinite level

Well, he is still some kind of finite element

and you have an infinite gaze

and it turns out that it is normalized to the level of Infinity

i.e. it reaches the Norm

then what is the meaning of management

that you only have to bring your gaze

to Infinite level

so you immediately get something that is not harmful water, for example

next level of management

it is the ability to use any movement there

in terms of reflecting some harmful consequences

i.e. it is necessary to connect  
any movement  
any Thinking of yours or another person  
with counteraction system  
any harmful parameters at all  
if it is terrorism and for example so that there are no diseases, etc.

and watch periodically  
what points are responsible for this  
For example there is a hand movement  
look at the movement between two adjacent fingers  
and watch  
this is what Norma is  
what point in space-time is Norma

where is this point that guarantees that a person is healthy

it includes protection from any kind of impact yes  
just development norm

i.e. the ability to connect  
some movement some action  
with Norma  
and the Norm is ensured by concentration  
in this area

Finding such areas is not difficult at all  
you can take them using the methods known there, for example mine

and is it possible to find their points  
due to visualization it's simple

so the next method is detoxification so to speak  
to a greater extent it is possible to consider it this way

this is the process as follows

you can consider  
contact with the external environment, for example  
let's assume there with the wind  
as a system of contact with positive information  
i.e. the wind simply brings air  
brings positive information for you

highlight positive information  
for myself  
simply in areas of the external environment

there in the air i.e.

and take these areas and fix them  
and even as if there closer to you stop them near you

and here is the separation of the negative phase  
will show the tool right away  
how to influence a chemical element <sup>suppose</sup>  
so that it is not harmful

here the negative phase begins to slowly separate  
you can see it in the information  
this is a very good practical level of management

in the conditions of precisely the Eternal development of man  
a person must be able to see  
how to take advantage of any situation

so that life would be Eternal

and here is the selection  
namely substructural systems  
such <sup>in general</sup> any class of management  
and creates a level of , well, actually, Norm  
at the moment when here, <sup>actually speaking</sup>  
you participate as an individual  
which selects one control element there  
and implements it there

selects the next element there and implements it

so I think that the situation here is like this  
what is important first of all  
well, at the level of control <sup>over</sup> information  
this is the principle of Eternal development  
the principle of Eternity of any person  
implement as a practice

i.e. no matter what happens in life  
we need to be able to  
Well, first of all, it's clear to neutralize, <sup>yes</sup>  
it means some radically harmful action  
minimize bring to the level of the norm

and at the same time gaining experience gaining experience  
consider that this experience  
maybe it won't be useful anywhere anymore

for example, there are some chemical problems  
there just might not be this type of problem

but nevertheless experience gives an opportunity  
show in control  
that first of all, it is necessary to exclude the negative level  
always as much as possible

the second is that the experience is precisely of Eternal development  
it still has slightly different characteristics  
because the tasks there are often more advanced  
or more in-depth  
well, sometimes they sound like completely different types of tasks

and in the transfer of control over Eternal development  
any situation with a negative meaning  
It is necessary to overcome it personally of course  
but better collectively if possible

and I think it is appropriate to pass on knowledge

well, also more active  
when such specific situations arise  
to protect people faster  
Of course, it's better to pass on as much knowledge as possible  
so that people can calm down in a calm state  
everything is resolved faster in management there

although on the other hand often in an emotional state  
the man decides everything quickly  
but this is precisely the balance of the Norma  
with the aim of harmonious development  
this is also an element of Eternal development

and the standardization from this ideology is also necessary  
those. still need to go out  
to a harmonious line of development

because management is often such a process  
that one impulse is enough and everything is normalized

i.e. often the problems are not always  
some very serious ones  
but you just need to be able to meet them like that  
so that they do not cause any real harm  
that's all

that's why I think it's necessary to use different technologies  
which I have now given in the form of some practices  
and at the same time those theoretical calculations  
which are connected precisely with practical actions

I think it should go here  
precisely in the direction of the Eternal development of man  
in any situation as I said

First of all, of course  
avoid as much as possible  
well and then not give it the opportunity to develop further  
some kind of negative information  
which would look like information in the first place  
and here at the information level, collapse the process

and then it is almost necessary to bring it to that point  
to collapse the process at the level of material systems

and by the way, you can even look at the management practice  
that as soon as collegial management is built up  
for example, here are those who are present in the hall  
work there literally for eight minutes

from 22.00 to 22.08 on this very task continuously

then you can already see it at the information level  
of the harmful substance drop

In principle, it is possible to measure it in a laboratory  
comparing literally right there in the interval of these eight minutes

i.e. it is possible to practically work through this situation  
and see  
how much more efficient is it to work there  
one way or another  
how efficiently does the system work  
by management  
through the collective Consciousness there  
through your personal Consciousness, etc.

I think that in choosing management methods  
try to make a selection  
maybe more specific

in this situation

and see what's best for you  
i.e. maybe make some kind of small plan  
to paint  
what method does it look like  
in such a shortened form

and try to do so  
so that you have this as a mechanism of application, so to speak

purely practical sheet  
there or several sheets  
that you could use in the situation  
when there is information of a negative nature  
it's not necessary there  
only some kind of chemical damage is possible

but in general, from the point of view of overcoming terrorism there  
from the point of view of there being obstacles  
some possible diseases  
prevent health problems  
neither myself nor other people

i.e. here is some type of specific methods  
I generally recommend them in a formal form  
maybe it won't be that much there  
literally a few techniques

but here's something to have in case  
when you need to apply control  
maybe long enough yes For example  
while this situation is being neutralized  
let's assume based on the possible impact of chemical elements  
for example, you will have to constantly use control there  
until this situation is neutralized yes

i.e. it turns out before neutralization  
I'll have to work after all  
and so I think that it is even possible to work it out  
system by methods  
when there for some time  
one system of methods is used  
there is the next one for the second time

and so try to approach it more dynamically

the main thing is to work it out, of course  
from the point of view of Eternal development

namely the prognostic phase

know for sure that in the future you are not susceptible  
some kind of impact

By the way, today's seminar gives an opportunity  
this place can be found in information

there, in principle, two or three practices are enough  
and you will see that it is not so difficult

i.e. we must try to see simplicity in management  
because in management I try to give often  
fundamental roots of relationships  
if possible

and therefore it is possible  
can be read for example once  
and the technique itself already works as a method  
not necessarily all the time  
there is a fundamental part to view

that's why I recommend these methods  
make it just practical there practical tool  
which ensures the real Eternal development  
there is not only you  
any other person

i.e. the ability to also pass it on to others

let it be related  
with some level of time, so to speak

although I don't think it's difficult  
it's only a matter of time

nevertheless, we are trying to expand such management  
then in principle there won't be any real problems

and from the point of view of Eternal development  
the basic concept will be implemented  
that a person can do it himself

which, by the way, everyone can see for themselves

This is where I end today's seminar.

Thank you very much for your attention
