GRIGORY GRABOVOY

Spreading the Teachings of Grigori Grabovoi on the Internet

01.04.2005

Hello again
The topic of today's seminar
this is the Dissemination of the Teachings of Grigori Grabovoi on the Internet

and in this topic I mean first of all
providing real help to people
regardless of any external prerequisites
which are formed in the information space

and here it should be borne in mind that on the Internet
naturally due to the remoteness
or uncertainty of the source
the information can be absolutely anything
by context of actions

therefore the first management status
is to identify the places most in need
as if in the network itself
through which one can come
to helping real people

i.e. a person who works online
he must first identify
existing management tool
how to show logically

In fact, we are talking about the following Internet users
where the structure of primary management of this type is revealed
what a person clearly understands
that there are completely available
for simplified, so to speak, mastering
logical control methods

i.e. there is management, for example , in the health structure
through education
there is event management
or if there is work in the field of instrument making
well some scientific technologies

he is a person when he works in this case on the Internet
I think I should clearly define my positions

which he owns

Well, that's why I'm entering it now
for example, licensing of Internet sites there
where will be determined
various areas of activity
each participant in this process

and as if already having an official level
from the point of view of my authorial level of management
some list of materials
a person will already have some kind of tool
which he will have the right to distribute, for example
from the point of view of access to the systems named here

so the first level of management
where do you define
places where help is most needed, so to speak Yes
and what can you do
it is still there at the beginning of the search mode
in the common space of the Internet

i.e. it turns out
what is the primary level of the participant's work
should consist of
so that a person can first consider
in fact, the entire information space

looked at those parts of the Internet space
through which he must, as it were, provide
and is able to provide assistance
in providing materials we assume

and naturally in dialog mode
It is always advisable to monitor the results

i.e. it means to design it like that
as in my license agreements
there are forms of certificate of work results
where people should send information about the result

here it is natural to keep in mind
what's on the internet
it is always possible, for example, some kind of parallel control
access to network systems , well, through hacker channels , etc.

therefore the reliability of the information

must be controlled
in parallel ways , so to speak

firstly it means desirable
as if to the subscriber who receives the information
provide multiple routes
which would determine
through some gateway systems maybe
arrival of information

i.e. you agree in advance
what does "sender" of information mean
he introduces a system of some codes
which should be written down at the bottom of the sheet
in the form of a sequence of some numbers
and the sign of individuality must be preserved

if this is not the case
then the question should be asked naturally
either he forgot or it's an external source

I do this for that reason
so that means to track after all
accuracy of dissemination of the Teaching
from the point of view of direct access technology

those. regardless of the amount of information yes
regardless of the structure of what is happening
in the Internet space
you should be able to do it quite accurately
transmit the original information

in connection with this, I am introducing, for example , now
system of canonical texts
canonical video materials, etc.
which should be distributed
or under the terms of the licenses in full
or if in part
then this should be agreed upon initially
i.e. I must personally follow up then
opportunity well for example distribution
segment of some information

because as a rule integrity is necessary
at least within the framework of one seminar
it's about 50 minutes on average
and therefore maintaining integrity is usually not difficult

you can only provide support, for example , for a file
but at the same time the segment itself is desirable
not what is desirable
but in general it is necessary to preserve

and comments that would indicate
some specific areas
they must be external

and the user must
It is necessary to clearly distribute that situation
what exactly are comments
these are the actions of another author
and it should not be confused, for example, with control technology

I'll also explain what this is connected with in general
for example , in my practice of diagnosing aircraft, for example, it was completely clear at one time
that this information does exist
direct vision of Reality yes

and the logical level
it's still a different control system

and it turned out like this, what does it mean Well, initially I entered it right away
a separate factor is still the transmission of information
there my information ended up in the safe

but it still means something
at first, for example, in the same airlines
when transmitting information it turned out like this
what people thought for example
that this is general information completely
Well, they used it as technical information.
which in principle is , well, kind of against the general background
it's enough in a generalized version, as if it's not relevant or something
if it is a small defect, for example

but when I started to highlight the information anyway
because I gave more
First of all, what exactly can lead to
let's assume there is an air accident

then it worked out here
that the dissemination of information
became very fast in general
this is precisely the authorization separation system

by structure of difference

where there is direct vision of events
i.e. for example, well, my information
as a structure of direct control of Reality

or is there a logical context
or the opinion of other systems

that's why this linearity of distribution
Firstly, it will give precision in technologies
i.e. this means that people will simply get it faster
control

and this is the division
I think it should be accompanied
it is also possible with a special marking system

i.e. it means that the author's index
there must be some individual
well, like a digital signature
and a file that is, for example , external
it should be recognizable as soon as possible
in the first control criterion

later when we already talk
about how in particular yes For example Well let's assume to counteract negative
governance structures
which are created in the Internet space

everyone knows that they can be created
by means of , as it were, external economic injection
just a number of employees are paid
sometimes there can be a lot of them
which simply work at a counter level

I mean employees of some ordinary organizations
who are assigned to work for example against yes
there may be natural infusions
not necessarily economic
there may be ideological, let's say, neo-fascists
strive to reduce the population, etc.

and therefore, in work with Internet technologies, for example
it is necessary first of all to identify
the root of the situation

i.e. always try to understand
what is the essence of the action taking place

and considering that we will naturally have to deal
especially within the framework of, for example, my Presidential program
that in any combination of events
I am the President of Russia since 2008

naturally here it is clear that they will be in the counter level
exhibit quite large ones
Well, maybe financial or ideological resources

possible means a combination or special creation
as if ideological counter levels

so in principle
when identifying, for example, the management structure
after all, we operate within the legislative framework
i.e. we save people and create Eternal development for them
so in principle the guideline is quite simple

it means a structure that works
within the limits of the constitutional field, let's say yes
protection of human life, etc.
it's quite simple
and a structure that is fairly understandable to everyone
which in general is of no use to us
or neutral
or, for example, some kind of positive level

and when for example
we are starting to make this type of management
what we need to identify is the source
this is what the source actually consists of

here I think we need to work at the level
bringing information to that plan
which is natural if the source is paid yes
and it works as a counter-factor, as if against the Teaching
then it is clear that management should be based on that
that at some point the source comes to that
that it exhausts the legislative field, for example, yes
in management

and here the main thing is not to allow it, I think
conscription well as if a counter agent yes

to break the law there
or influence the personality

and under any combination of events
we naturally have to
always give control
I consider benevolence

i.e. under no circumstances
we cannot, for example, support the point of view
that some form of influence is possible

on the person , etc.

i.e. it is necessary to support
the structure of complete personal freedom
and naturally the right to speak out
as if any position

but if we notice in the Internet field
that there are calls there for action
we must of course in terms of ideology
We cannot allow this under any circumstances
impact on personality
including physical impact naturally

often need to be monitored
exclusion of the moral level of influence

because in the Internet space
sources not identified
and with a factor of well, approximately like television
this can naturally have a collective effect
more like essential
than just publishing some books, articles, etc.

and here it is necessary to intervene of course
into the management structure in the predictive version

i.e. knowing that it will go in any case
for example, a negative development structure
or the negativity will build up
as a result of, for example, a fight

i.e. some areas that
preliminarily means included in the management
and for example, at the beginning they have some technologies
which, well, maybe they can do

but if they are faced with the fact that it is
or it is a big and long work
or this, well, in general, requires
for as long as they hadn't expected
they can naturally change positions perhaps [...]

we must understand
that even those who come to the Internet space for the first time
people can be very different
unencumbered for example there are written commitments

so it is clear that there is fluidity
or there is a change of points of view to the opposite

there seems to be more possible there

and so, in principle, the situation here is like this
what we must very clearly mean as if actually predicting
predicting means the behavior of the structure and management
which is identified by some IP address
it doesn't matter who is behind it

perhaps entire groups are standing
who work through each phrase
For example there are special means from Western countries
are used under one name
fairly large intellectual teams

and how the IP is written under one IP address
under one name that it is as if one person

it turns out that one person
Well, for example there is a distributor of my Teaching
he enters into a struggle with a large group
who is well-versed and ideologically natural
and often paid for in advance even a year

they have a specific program, specific plans
which they produce directly from words by the way
i.e. bringing words to a specific level
up to a specific level of users

and therefore, in principle, it is necessary to take into account here
that all this exists as a fixed system on the Internet

so we have
I think there are big advantages
unlike just TV broadcast there, yes

where it is said and the information disappears

considering that we have management capabilities
they are basically any
according to my teaching in terms of Macro-creation
the main thing here is identification
or vice versa restructuring
identified system yes

it is possible in many ways in general
It's clear
but the axiomatic level
that wherever we encounter a control system
there is counter control for example

we must naturally, in a general systemic analysis , so to speak
bring again the dissemination of the Teaching
into the system

no matter how they behave
we must try to put forward a system
at the level of for example well, comparative action
let's assume the same as in aviation
when engineers also gave an intuitive forecast
but he was different in that
what is the intuitive system in prognostication
she didn't match
but my clairvoyant one matched mine

that's the difference
that we can apply technology
precisely prognostic ones
i.e. we can know
how much is there for example, there is a paid action
some person
and continue to predict
or the disappearance of some site file
or, for example, its development

that's why I think that in general in the Internet system
need to manage more
well if you compare it like that
with the level of some dynamic systems
you need to kind of highlight it
some marker of one's behavior
and try to orient the system
on yourself

because even with good payment
in control as if in counter-control
they are still forced to use it
your group of words

so try to predict
how would you use this group of words
from the point of view of a local level, so to speak
for example sentences
but it is clear that in the context only a piece will be torn out

you know this accordingly
and start working with this proposal
that it is broken down there into a sub-phrase and a phrase

i.e. the integral system is as if in a hierarchy
which contains a group meaning in management

and at the same time you orient yourself
external control over some substructure
for example yes I say what's there tomorrow
a seminar there on the Teaching, for example
so we
I may not determine the topic of the Teaching that will be
as a rule I do
and I always have it in general
I create it yes at the moment of management

so it turns out that here we can divide
management there is "tomorrow" yes
to use as if a prognostication of some future

the counter level starts to search for space
what is tomorrow some number let's assume yes

so I give control to the next plan
what for me well how to unlock the system
and bring it to completion
Well, this is what I'm showing, for example
bring management including on the topic
a link somewhere that I am on the third level
that I create a topic at the moment of the Teaching

and users using the main device
which is set out

Well let's say on some official website
begins to come, in principle, as if to ideology
bypassing the structure of counterarguments

because in search engines
naturally they will be introduced as if
blocking systems or unblocking ones
these are these search robots
who are looking for word combinations
they are naturally in a group of companies
they will try to remove from management
Well, these are the phrases

and to get around them
For example there is the Teaching of Grigori Grabovoi
it is inserted into the robot, it is generally inexpensive
about ten thousand dollars
insert for a month there in the search engine
so that robots from popular sites

they came up with some phrases
Well, this is actually a not very well-known structure
but in principle it exists quite widely

and now if we count
that large amounts of money are being poured in
to remove from search engines
this one well For example there is a level of phrases
there is "The Teachings of Grigori Grabovoi" etc.
in this regard, some topics

we must therefore be able to get around it accordingly
as if the work of this robot yes
so that's why in principle we should
here in the topics when we distribute topics
as if we were bringing it to subscribers

show what it means
or at the level of third-level domains
by the way, it's easier to work often
and in the foreseeable future
third level domains for the next 25 years
they are quite difficult to block
and are extinguished by these search robots

so basically it turns out here
that you can open a sufficient number of domains
with links to individual pieces of phrases

and then the robot makes a mistake, it hits
in the primary level structure for example At the teachings

" Teaching " is enough
and the weight function for example Teachings
and add some kind of digital row there yes
1 2 3 or 1 2 5

he starts searching
and then throws out already from the third level specifically
what is this Teaching of Grigori Grabovoi

i.e. using some kind of accounts Yes
that means there are special structures that would
were taken out to search engines
main control unit
what is already shown where specifically
where is the receipt information

so that means technologies of this type
you can just study and try to determine what it means

which ones exist at all , as it were
these search robots, so to speak
how how are they arranged

as a rule their work is based
on hardware first
and that's why the system of unblocking is like this
that we only need to bypass the logical circuits

so from a programming point of view
it's not that hard to do
because any system that is built into the device
it always has a route that can be bypassed

so basically, as if we want
for example, to transfer to Western countries
through a number of filters
training structure
or translate into another language and pass it on
then we should just in information
i.e. try to understand management
best to see the route
from the point of view of the integrated circuit

i.e. see the diagram itself
see the signal propagation

and connect with the software block
which is the most active in getting
here is the structure of the Teaching

then it turns out that we immediately determine
route
from the point of view of interaction
substance - logic yes

and in the structure of management development
there in the Soul of man
there is always a level of Salvation
the person is still in search mode
looking for something that can save him
and as provided there For example
the same possible global catastrophe, etc.

so it turns out that we are proceeding
from the logical factor
global catastrophe is possible
because it is a probability quantity

i.e. yes, there is such a quantity of weapons

probability quantity
that it might work

in search mode if there is a possibility
then we can't help but react to it
i.e. there is the usual concept of " common sense "
we work exactly, well, just as if using
with this one so let's say the level of management

we naturally look
in the collective Consciousness
who perceives this logically

Next we look at who perceives
at the event level
at the level of events in the Soul
everyone generally perceives

i.e. the soul is like a search engine or something like a system
which fights individually Yes
there may be some negative management with the structure
She still solves problems practically personally

here here here

The soul and the person coincide

by the way in the Internet space
actions
Soul
and man
in general understanding they are very similar

that's why there are situations like this here
what if in general, well, the person there
he went out somewhere to the field or he is out in nature
then he has it on a personal level of Perception
to the segment of Consciousness
per segment suppose there is no external space
his "Soul" "personality"
these are still concepts that are considered in this way
that personality is an action that is necessarily positive

positive action is inherent in personality
and the Soul is what is Macropositive
that which is connected with God

and it turns out that she is connected with God
when we work in the Internet space
we kind of block

very much logical phase of external control
this resource yes

and the resource is in optics
it is often very individual
due to this the Soul of man
in Internet management
it is actually by identifying
individual control acceptors
often gets drawn into one level
Well like some kind of route, let's say

because the world is arranged like this
naturally any environment
including the Internet environment
is arranged similarly to how the human Soul operates

not because it was done on purpose even
and because any element of Reality is arranged this way
For example the molecule is structured like this
that knowing the actions of the Soul
you can regulate the molecule, etc.

and when do you start
get involved in the management process
try to consider the action of the Soul

look at how it is God does
in the structure of complex events
or events of a logical plan

for example from God's point of view
He created man then it turns out
where is God's logic further?
what is next the logic of God

then there is that
that God gives the next development in the same resource

i.e. man created the system
and then He gives him an even more complex system
He actually creates it himself.
but Macro creation should be the most relevant
to know God there let's say in the action of the Internet
we need to see the Macro-creative level
in network structures

and it turns out that it is very easy to see this by the way
in terms of identification

the gateway systems seem to open
i.e. your access to the system is simplified

for example , there are many sites in front of you, yes
understand which one
there is a path, which means it is indicated by God

here it turns out
firstly, it's fast file opening, yes
Providing the most optimal information
in a short time
and accordingly, well, is the system less stressed ?
and less load on the structure of the Soul's action

i.e. well, several parameters
which determine the structure
aimed at Macrosalvation

because if we take a head of cabbage there
and we want to determine

which leaf is the most there for example delicious or the best
we must from visual observation
it turns out that the conclusion can be drawn
here is approximately the same task
which sheets should we go through

it turns out that the situation here is
Well, it's just a matter of taste, right?
that's how much it makes sense for you
i.e. your taste is meant
not the taste of the cabbage itself but your taste

and it turns out that when you start
do management
It is important to make the next level here

there are marker systems that indicate that
that the primary level is some negative information
if he is authorized
it is in large quantities
usually characterizes the following action

i.e. how to build a forecasting system
in the behavior of the receptor yes means some

so it turns out that this is what I call a "receptor"
because it acts as a dialogue system
constantly collects information
about your level yes

because you are manifested on the Internet

and that's why we're looking at a certain subscriber
it works in terms of a certain receptor
external environment

Next we need to track
or a one-time receptor
this is an individual subscriber
or it is systemic, etc.

so when we work in this system
it is necessary to identify it after all
in terms of predictive action
how can one marking be effective
well, some negative level or, on the contrary, positive, yes
or very positive, which can also be quite strange

with a lot of work
so if some things are of course positive
they are positive
i.e. there is practice
there is control there is result
All

if this is accompanied by an additional level
well, some kind of unstructured positivism
the channel needs to be checked for compliance

perhaps it is possible to simply place an order
from the point of view of the initial entry into the system
at the level of trust
and then just a counter-action is done on everything

therefore, as a rule, the tracking criterion
and login
to the level of clarifying the circumstances
is a dialogue from the point of view of the results of the system

for example a person or a system
or just some object of information
under a certain name let him speak
that he is engaged in the dissemination of the Teaching

then he must provide
First of all, the results

as soon as the results are received
this is a search for compliance with existing systems

summing up well here it's better to develop
of course controlling clairvoyance
but I'm talking about what can be done using logic

consider as if a spectrum
Spectral level or something
by sections
are there any such results
in principle, in general, in canonical materials
do they exist

that means if they kind of enter the system
then all you have to do is do an analysis
does this really correspond
Isn't this story made up first of all ?

and secondly, if it is not made up
Well, as a rule, then they send you to the Foundation, for example
where can i send the original
there is a notarized result

or, in general, having recognized
that the system really exists
by the way well as if by means of predictive diagnostics
try to work further, for example

there is another control factor
which is obviously a fictitious result
which does not correspond to the established areas

because we are talking after all
about specific areas of management
which were revealed there in my personal practice
for example, this is equipment diagnostics
health management for example there resurrection, etc.

and if there is some third motivation
for example the movement of some planet
there in the galaxy
then in principle, firstly, it doesn't give us anything
at least now

then if it gives
we have to do an analysis and say
and what will happen if we have a gravitational field
can we change ours or what
what is the advantage and how can we check it at all

i.e. try to cut off the level immediately

which, for example, well, for example, can somehow influence
in general on the direction of development

because after all these are Internet technologies
where there are a lot of users
and if we develop the topic, well, that's what I said
let's assume that we are dealing with some planet
at this moment we can save
are millions of people there
if we get the information of the usual type correctly

that due to some specific management methods
you can either get cured or do something like this
so that an earthquake doesn't develop there

up to a certain amplitude, etc.

it turns out that here in the structure of the rescuer
of course there should be identification
exactly the target level
based primarily
on factual results first

if the factual result
will be tested and registered
as a topic
Well let's assume that someone is moving the earth's crust, for example Yes
maybe it will somehow sway it for the better
so that it does not lead to earthquakes

Please
if we register in the action plan
there really are such technologies in optics
which allow to dampen the earthquake wave

so but maybe they exist
non-optical technologies

i.e. we still have to consider
what exists in the information field at all

from the point of view of the Teaching
we can always contact
with all the technology there
which are generally useful

another question
which I think is easier to use
so even at a broad search level of management
only by the technology of my Teaching

where I know for sure, I have this experience myself
thousands of testimonies that students have received
through the development of technologies

and here it turns out
or there is a linear development of technologies
or then already synthesis technologies
but in synthesis technologies
a very clear testing system is needed
may be comparable
where are the results, where are they presented, etc., etc.

as a rule generally speaking
from the point of view of general norms or something
even of such an international plan
the best option is when there is evidence
one person in general
not even an organization but one
where there is, well, there is at least something there
signature certified
better yet, some kind of witness
but either notarized
or even some organization

an organization is a structure after all
in general, as a rule, it is appropriate
some social processes
and it can be oriented differently, etc.

so as a rule
better to look first
on the testimonies of people

then there are already organizations that have
well, some kind of objectification factor
i.e. they are registered somewhere
for example, in the Ministry of Justice, let's say
or some registration bodies
and then everything else, yes

that's why it turns out
what is in working with Internet technologies
already in a positive aspect or something
revealing the structure of practice
here you need to use
a certain amplitude or something in control
from the point of view of the control wave

that there is a certain angle or frame of control

and by the way, here are the licenses
to disseminate my Teachings on the Internet
I will show here

in general the text will include
work structure
now it's almost ready
this license package

there it is standardized
interaction system and development system
from the point of view of possible development
well, let 's assume that there are changes in the structure of the material
in the end they exist
there are some options for external type of hacker control
entering other texts, etc.

that's why it turns out
that includes protection of materials
in the license package
the management structure will be laid down
what should he do recommendations by the way
what methods should I use for management?
in the Internet space
they will be as special recommendations

because there are more targeted methods
There are , for example, methods in the general management plan

although this is the Internet field
there we will say a network field
in principle as a general area of management
it is of course no different from anything else, let's say yes
at the information level

another question is what could be there
faster processes are more connected
with the system of collective Consciousness

and it turns out that if you control the system
within your system of Perception
this is one level
and your personal event

Internet management
it's on a social level
may be declared or prolonged or expanded

events

and here it still exists of course
such an element that in general in the case
how is it even possible , is it logical if it's modeled like that?
to solve some problem
how can you even stop the speed of development there
some kind of positive system

if for example let's assume there is a task , yes

for this as a rule
naturally some external system is taken
which doesn't fit in at all
into the structure of the system as such

because the system is considered to be
exists autonomously
and this external event is actualized
and the system starts to "shake" as if it were not stable
it is not provided for within the system

and then it turns out that it begins
this is the system of destabilization
at the expense of some counter -agent

and well let's even assume that this structure is there
about that
there which exists in the press
that supposedly one of the students is there
for the resurrection it means he took money
although I have a decision on the Fund
and in every volunteer agreement
what is free
Moreover, it is specifically stated in the license agreement
what about the resurrection
free of charge
because there are no permanent royalties
it means it's written right there in the phrase

i.e. it turns out from the point of view of the system
everything means it exists in terms of that
which is naturally free of charge
who cares as it might come to mind
precisely for the resurrection
let's assume we take specific amounts there

another question
what is visible during the procedure
any universal seminars

depending on what they are related to
Naturally the students, apparently
there are some expenses that can be covered

but how many personal surveys have we done
none of those students who ever came to me

or even not considered students
at least i see that they are telling the truth
precisely for the resurrection, specifically
they didn't take money

but nevertheless this kind of feature is used
provided there is some kind of moral pressure there
in the background for example they still use this theme there
which I think shouldn't have been used at all
How are the children of Beslan?

and at the same time, it means that an external counter-agent is used
to manage the formed system
which itself blocks the exit

i.e. it already contains
the absence of this motive for action
there is no such action at all

nevertheless
this missing motive
is output as external control
quite correct and logical in general

i.e. we say that this cannot be done
they say yes, like this, although this shouldn't be done
but they don't seem to read our materials
and use the same thing as a counter vector

i.e. our maximally revealed vector
they use as a counter vector
quite correct counter pressure position

because if we didn't write anywhere
that, let's say, it is impossible to take funds there, etc.
then it turns out that the system would be less mobile
and they would have to come up with something else

so that's why it 's working out now
what well as if Well in general
from the point of view of the systematic nature of the task
counter pressure
this is being done correctly, yes, from their side, that means

that's why we're talking about that
what does in order to mean well knowing there yes
Well, I mean the right one of course
in the grand sense, since they hinder Salvation

this is naturally wrong

but from the point of view of the equality of all systems
here are the forces of destruction
there are forces of creation
we believe that they are equal and have equal rights
they had to choose
the most optimal system of counteraction yes

in principle, one can say
that they chose quite specifically
well, that is, the counter vector that we have written down
as a forbidden system

but as if in the structure well why for example yes
good will always win
I see then

because it still exists
deliberately built-in error
as if in the action of an external system

and because
since we have it in our license agreements
it is written that it is not allowed to take amounts yes on the topic of resurrection
i.e. it is not possible to provide services for a fee at all
like actions, so to speak, such

it turns out that the licensees are now all right
in case of such information
there for example there in court
file lawsuits against those who offer amounts

i.e. we thus
already blocked the possible
let's assume well, is this a development of this situation ?
i.e. there is still some kind of core inside the system
which reproduces itself yes

and it turns out that based on
from well as if at a systemic level of solving the problem
in ideological terms
naturally, it is better to exhibit first of all
ideology in action

Well let's assume there is a simple question on the Internet

there are followers of the Teaching, for example, there is Grigori Grabovoi
they take money for resurrection
simple question yes

so firstly you can't do that
because everyone must be resurrected
there is a concept of "general resurrection"
which will come true anyway

and who doesn't have money
how then should they be resurrected
the simple answer is yes

and try to use more ideology
than even often by some formal systems
for counter arguments, it is precisely in the forum system

and moreover
by the way, in the access control system
we need to determine which systems
generally open which ones are closed

if for example you work in management
First we need to determine
what sites are official anyway
have the status of media, for example, yes Well, they are registered.
for example, there in the Ministry of Press

consider which body is the registering one
in different countries
and try first
work with official structures

if they block your entry
then we need to work with third systems
or in those systems where they are manifested

For example there Well, let's say some newspaper
which does not allow access to the forum
and drains almost all the time
negative information yes
or some official structure
which has censorship when entering the forum

you just need to keep track
Who do these systems even contact with?
what are the closest editions
what are the most similar topics

and try to enter there
in forums in these systems as if indirectly

because to close all forums
it's almost impossible la
control any other system
it's much more difficult there

and by the way, in my Fund, in general
for example action for example there are newspapers there yes
"Control Option - Forecast"
It is built on the fact that it is, after all, an independent newspaper.
she can determine her position
although this is the Foundation's newspaper

nevertheless it means
there, as it was determined at the time
the position of free will there Well, let's say the press, yes
I still have a newspaper in this regard
takes action freely

i.e. therefore it is necessary to take into account
that this is the level that I have designated
if there is some kind of corporation
which controls all sources
so we look at what is outside the corporation

as a rule, it is not difficult to determine
On the Internet they are almost always
expose the outline
i.e., as if the edges there, let's say
initial boundary conditions of their actions

and we can clearly define
what is related to this or that corporation
what site does this actually refer to

as a rule this can be established
in almost all cases up to one hundred percent
That's why
and in normal search mode

if we want
do well as if the induction of the system
for the development of some of the following technologies
For example there in the forecast future
what will happen to the system

how to interact with her Yes

you can put it up as if let's say so
test marker phrases
which should be drawn into the structure of the forums
and monitor the indication for compliance

Is this forum appropriate?
primary ideological system of the corporation
or our supporters appeared there
they start to unlock the system itself

because it turns out that we are in any case
we have it in almost every country
the legislative field is normal

i.e. we are just on we just do it like this
so that people are healthy there
Lived Forever
and there were no disasters Yes

any legal system
provides this level of action

so as soon as we start working
in this field
and there is resistance
like, well for example, methodological basis yes Teachings
then it turns out that it is enough to put it out
according to the norm of international law three results

for example we give
three protocols received results
and there are already thousands of them
from the use of some methods
and we say that since these methods were obtained, for example there
as a result there are educational technologies

i.e. well For example there are plans received
precisely for Salvation
then they were used
or the result is obtained
we have the right to consider
what does it mean Well These methods can be extended

if there is opposition
People clearly understand that they are acting

firstly against the known result

that's why by the way I am regardless
what's going on there on the Internet , etc.

I still spread the Teaching quite calmly
I just continue to distribute the system there
as if sometimes even as if Well, there really are such opinions
that there is no such immediate, mobile, or quick reaction

and because, in general, we especially
Generally speaking, there is nothing to worry about in any case
we can distribute it safely
from the point of view of what I said
in the legislative field of any country
we have a free niche, that means

secondly, the most important thing here is
in terms of action and validity
we have results that are in themselves
in general, the result of protecting society is simple

and as if counteracting the results
naturally defines very clearly
the position of another person
well let 's assume there is this commission on pseudoscience
For some reason they are the same Kruglyakov Yes Edward
I thought I shouldn't have gone to Semipalatinsk
for some reason he himself came up with this

although to do management
Well any mathematician understands
the model itself is enough
enough experimental results
example, on the cracks that were provided
and that's all and that's enough to make a mathematical model

Besides
the mathematical model is as follows
which any mathematician can verify
having higher education

i.e. one mathematician was enough
send and make an examination
everyone would confirm that the system works

but they didn't send anyone
they're just on only perform

Well, right there it was a deliberately ordered action
there outer side
They say that they " catch on facts "
and even those who come up with them themselves, yes

or there is some position there
me at the Higher Attestation Commission and asks
is there a doctorate

Well, first of all, when was the issue being resolved?
what doctorate to defend
I was offered either the Higher Attestation Commission or the Military-Major Attestation Commission
it's in [...]

then they immediately said that it was the Higher Attestation Commission
The Supreme Certification Committee
it's more of a local system, well, it's a post-Soviet system
and there is practically little opportunity
For example there to give lectures abroad
need to confirm

and there is also the Higher Higher Interacademic
this is the Certification Commission
VMAK
where there were already contracts
with Western European universities

and when defending the VMAC
Moreover, VMAK is registered with the Ministry of Justice
same as VAK

for us it is generally a control system
I still think the legislative field is included
and the registration authority, the Ministry of Justice
registers two organizations as equal
I have the right to choose yes

It is natural for me to spread the Teaching
It would be better to get a VMAK
The Supreme Interacademic [...] Committee

and that's why I did my doctorate through VMAK
however, for example , this is a normal defense
This is a theory realized
here is "Applied structures of the information creation area"

expansion there in the journal "Microelectronics"
was published
theory practice
the systems published are specifically test ones
i.e. working systems
where are the laboratory installations they are made
there are conclusions of well-known scientists
they really work

i.e. everything matched
at the level of primary implementation theory
and devices

it's generally like a universal mechanism
which can be protected
in principle, in any specialized institute
at the level of the Higher Attestation Commission yes For example

so but then
then it turns out I will have to work more
within the framework of regional systems only

that's why when I got the VMAK
there were invitations right away
I sent some of the lectures
to foreign universities

and moreover, if we talk about the fact that
what is the criterion for a doctorate there
First of all, I have a doctorate in technical sciences.
This is a European university
then the Belgian University , etc.

i.e. not only Russian ones are meant there, but the Higher Attestation Commission
I have to talk about this, that there is a certain VAK
why should i think only about that
that this opinion should be somehow decisive
although I always strive for speed yes

so here it's like at the level of well , counter arguments , yes
Naturally, one can present counter-arguments about this
what does it mean there is always control

that's why I'm talking in detail
will be there on the Internet anyway
some kind of exchange of these questions and answers

as if some answer is more in the systematicity of actions

we must show that in any plan
even if it's a new system
but we have to choose
this is how I think it should be done correctly
that it was VMAK that I chose

that even though it is new, it allows you to work
they already had contracts
with Western European universities
and some of the lectures were sold out immediately

Well there are actually lectures on mathematics

and it turns out that based on the management structure
that's what we need in counter arguments
again always follow up
why do we do this yes

there is some Italian academy there
First of all, there really are and I know people
who have the same academic degree
Italian Academy
in my opinion, economics and something like that
social systems

but she is like I think most likely
This Academy is like the one we have RAS and RAEN
most likely we are talking about that
that the Academy is approximately of this level
more in the structure of social management
than the Italian Academy of Sciences

nevertheless the same Kruglyakov
all the time sends information to the Italians
i.e. they work simply on the change of concepts yes

although anyone can come to the site and see
what specific Academy etc. is there
or are there other titles there already
starts to come up with situations
it turns out that as if

or the same situations by the way regarding aviation equipment
here it was again in the publication
that someone there whispered something to someone
although it was a very strong commission

signed by officials
they are all here now, they haven't disappeared anywhere

so it turns out that naturally we can
make a counterargument as if
Well, here, by the way, I think
here is Kruglyakov in the publication of this
quite strong in my opinion
Well, I made a pretty big mistake
in the sense that aviation protocols
he thought there was some whispering there somewhere
and there is a fairly strict commission of officials

and here he of course clearly defined his position
that he can say anything
in relation to any object of management yes
well any information

and therefore how should we proceed further?
what does next mean
well at least there might be more there
in principle, you can make any statement
in relation to any fact

but of course it would be desirable for us if possible
to put out as if True real information there
which corresponds to the management of yes For example

or the same thing there, this case
it's constantly being discussed
with Nazarbayev Ruslan Abishevich about the signature

If I hadn't personally seen what he signed in front of me
I might have thought about it
that his assistant is there let's assume theoretically
I got this signature somewhere , yeah

but he
the thing is that he actually signed it in front of me personally
so there are no problems, I kind of look at it this way
Well, I look at this as some kind of another system
what they are trying to impose
reporting to subordinate structures
let's assume there is an embassy

or in front of someone there

we either he or I have to report there
in the action structure yes
which is naturally wrong

i.e. there is a level
who subscribes to a specific plan
and this level can be realized
so in principle it turns out
what do we mean here
that the control system is like this
that in no case should certain phases be
try to explain there explain there
or should they be further lowered to some level or other

so up to a certain level
we are in control

as if trying to concentrate all opponents
in one circle

there is also one such control system
what we need to try to identify
who exists in the control field yes

It's easier to work with everyone at once
what's going on with each one individually

i.e. therefore in any case
truth as we say on our side
we work calmly
we must identify maybe even often
namely a consolidated system
what are they doing
and how they are consolidated
by what laws

and then work systematically
Well, I think we should try in a dialog mode.
try to translate the system anyway
into the management structure along the Teaching line

because if they came out
There is such a term, but it is more philosophical
what if a counter system appeared
that means at least
let it be negative but interesting
but at least someone found it in the information
the existence of information about my Teaching there

it makes sense to convey as much information as possible
to translate them
at least to a neutral level
or block with correct questions and answers
or try to translate it in the future
on the management structure, i.e. on the dissemination of the Teaching

possible to use
these kind of negative systems
there, on the contrary, for a system of this kind

there is a category of people, so to speak
or are there certain niches there
which are considered
a certain circle of users

and these are the systems that are often printed
there is a concept of some kind of " yellow press", etc.

there is a category
which reads only this system for example Well, basically yes
it means because they simply don't have time for everything
or they are attracted to some plots there
well, there are some stories there

and so they read a certain circle
or they use it there
a certain level of control on the Internet

if there arises a negative even negative wave
you still need to be able to use it to your advantage
i.e. try to use
in the structure of the explanation of the explanation
as far as possible, constant regulation
In my opinion
at the level of ordinary
actually speaking as if what about common sense norms?

that here are the results
there's no escape from them anyway
are thousands of them, it would be desirable to publish them there .
and send to them

well , it's good if someone doesn't like something
but the results were

so then the question is still about the studyability of the system
either he studies for a long time or he studies little

and it turns out that this is precisely the logical argument
we must try to implement mainly

i.e. in no case in my opinion
there is no need to switch to a system of confrontation there
exactly there is a tough type or something

because it works here
that in this way we simply cut off the system
and it turns out that we are in the future
we will have longer access to this system

i.e. that is why, in principle, all the same
Dialogue systems should be maintained in my opinion

Well of course if you are in a hurry
and there are actions of just this type

what do you mean , for example, that you think that there is no need to enter into a dialogue
and it would be better to develop a system there
Well For example there are parallel sites yes
more positive systems
then it must be done

but in any case, in my opinion
in the long run, an answer still needs to be given
to any negative level of control
in terms of that

because for us in principle
as if a negative level as such, or something complex
in terms of complexity there really isn't any

there is a control system
you can still take control through it
to the norm

example, I have not encountered this in practice
that there is some completely problematic level there
about which one can say
that he is extremely negative there

those. any information
it was just information there

and therefore it is possible to work with it
it can be transformed

that's why I initially thought
you always have to be completely calm there
to any counter statement
to any counter action
but it is advisable not to bring it to the level
some kind of real actions , let 's say
in relation to you there
in relation to the supporters of the Teaching

i.e. we must have a very clear marker, so to speak, yes
follow almost the same situation
that in any event
the spread of the Teaching is proceeding at an ever-increasing pace
this should be a marker that is absolutely clear

and therefore
Well, the same series of publications there
in the Izvestia newspaper
caused a very strong influx into the DRUGG party

i.e. if before it was well there are some dozens there
Well, hundreds of applications were not even known at first
tens
then we found out after all
hundreds
as soon as the publications started
and the people went
they started coming in thousands
these statements of party membership

i.e. here because it works out
that after all a party is a struggle
and it is clear that if there is a negative level of control
then we have to fight

this logic works like this
and what's more […] specifically to the party

and by the way, that really helped
after all, I called the party the party of volunteers
disseminating the Teachings of Grigori Grabovoi
as it was
Well, we are talking about thousands of volunteer contracts.
disseminating the Teachings of Grigori Grabovoi

then it was just a natural transition
those who want

it turns out that this is a movement of volunteers
which were basically made locally at the nuclear power plant
Now many people are doing work

i.e. I have volunteers who work at the sites
requiring specific management
often work simply as volunteers
according to my specific schemes, tasks, etc.

i.e. it is a voluntary movement
it actually grew into a party-political thing there
in a certain aspect

This was of course by no means mandatory
I made an open statement
that everyone is equal
party activist
Human
or non-partisan

nevertheless, the soil is this voluntary movement
very much prepared for rapid development

I think this is party activity

because practically at the first congress it was opened
200 regional branches of the party
in all subjects of the Federation

and it turns out that if it were natural
there would be no voluntary movement
under volunteer agreements
there would be so many branches
Well, I think it's unrealistic to open it there at the first exit.

and that's why we need to take this into account here
that some elements are outgrowing
from one system to another

i.e. we are moving on
just in each subsequent case
to a more efficient management system

and in this case, for example, party-political
she I think

Well, more efficient under modern conditions

because that means there are already integrated tasks going on here
and voluntary movement
and the movements of citizens and the state there Grigoriya
who also work there now mainly
in different countries, namely by the structure of the state Grigoriya

that's why I think that here we need for the future
consider the level
what if we move
for example, precisely for the dissemination of the Teaching
from the point of view of a kind of logical phase

then just in each subsequent case
need to move on
to the next management level

Now, for example, many students think about that
what social positions to already occupy
there, for example, governors, etc.

and how hard should one try here?
of course move synchronously as
as a level of just information
which needs to be implemented yes

not because someone wants to be a governor there
or don't want to
you just have to do it

and I propose this in the control system
how to accumulate the structure of knowledge so

what we should identify
still a logical information phase
and react to it
including the reaction to the Internet space

that's why I think there are some additional questions
I will always answer them
Well, maybe it's better to do it systematically now

i.e. try to work according to those programs
which will now be displayed on websites

there is data that now almost

Many of the directions there are implemented there
including the DRUGG party website
they will be displayed as system management

and then it will be generally easier
work through the organizational environment

Well , I think I'll finish today's seminar with this.
