

GRIGORY GRABOVOY
The Teaching about God
Adaptive Recovery System
09.03.2005

Hello again
the topic of my seminar today
this is my Teaching about God
Adaptive Recovery System

in this case we are talking about
that when some control is performed, let's assume
and you need to adapt to some situation
then it is necessary that this adaptation, for example, Yes
in terms of restoration, for example
in terms of further action
was produced anyway

i.e. sometimes it is necessary to quickly make adaptations
some phenomenon of Reality
actually take control upon oneself

and in connection with this it turns out
that this is precisely the adaptation system
often implies quick reaction

i.e. if a person, for example, has
well, some kind of need for super-fast reaction, yes
on Reality
then it turns out that this reaction
must necessarily happen in this way
so that he is the target of management
Well first of all there for example, the implementation of Eternal Development
completed

and in connection with this it turns out
that any information
which arises in this case before a person
even if she is very somehow there
Well, it is differentiated as problematic information

she should be such that he
the person himself must be present
all the time under Norm conditions in fact Yes

i.e. no matter what happens around him
he has to almost all the time

well, to be in some kind of control pole
that the information that is located is standardized
as if outside of it
i.e. it controls events
and among other things, he controls himself, as it were

those. management is like this
that adaptation as a systemic level
this is a certain constant norm in any conditions

and in connection with this it turns out
what a person should highlight first of all
a spectrum of internal , in general, even light reactions , so to speak
Push

i.e. there is an area which is problematic, for example
it could be some kind of disease there
it might just be some kind of problem
as if fast-flowing yes

it may not necessarily be fast-flowing in principle
there is some strategic task that needs to be solved there
but nevertheless he must
often very quickly adapt
and at the same time, as if to recover
if there is some external pressure yes

and if there is any influence there at all
there by some kind of physical information, etc.
then it turns out that the adaptation system
this is the level of the fastest possible reaction

i.e. he must have time to react
and moreover, under reaction conditions
often the forecast phase is determined
as a system of sorts of internal reaction

i.e. the person knows that everything is fine with him
because somewhere deep inside in the Soul
he definitely knows yes
but it is not necessary to refer to this
Often a person doesn't have time
how to check the management forecast all the time
because time is still wasted on this

i.e. a person must be in control all the time
but it must be one hundred percent systematic
i.e. the meaning is that in any case
under any circumstances

he must be completely in control even
give well basically to myself
somewhere on an internal level
there in the Soul for example yes, one hundred percent guarantee of that
that he will overcome this situation
he adapts
will have time to somehow withdraw the control systems
and resolve the situation

and in this case, that's exactly it
the system means exactly reagent or such fast yes
fast adaptive control
consists in the fact that
what is the volume of information that well as if it were for example
Well for example negative yes from the point of view of Perception
this amount of information
it should be such that its speed
increased very strongly

then it turns out to be such a simple process
here from God's point of view
yes He is in a state of rest for example
no matter what fleeting questions come
He is always calm at a certain level.

and due to that
that very fast information has a different weight
due to this it turns out that the main management functions
remain unaffected
i.e. precisely the target functions
where the goal is necessarily realized

and it turns out that well, if you pay attention there
there is, let's assume there are tumbleweeds there yes
or maybe dandelions are ripening there
and this fluff is what you get
it doesn't actually affect the Earth in any way

this is roughly the principle
Earth statics for example
or some big object there

and some lighter systems

at the level of weighing systems it's about the same
here's how the weight of information is if you feel it
something like this is on the level of the Spirit, this is the comparison

i.e. due to high speed
information becomes more sparse

in the Infinite phase

i.e. the law is like this
the more complex the problem than
well then in general it could be more grouped
the more intense some problem is
puts pressure on a person
the weaker it is in the Infinite phase
it presses at this point

Well, basically, this is the concept itself, let's say
well, some kind of "evil" or negative information
it is always a point system

evil or negativity there
it can't be some long one
because the World is as if Infinite
has some kind of rounded shape
everything goes back to God yes

it turns out that it can't be there
namely macrodestructions
in principle, there is generally a certain distance there
there can be no destruction at all

i.e. based on this we all know and understand there with the Soul
that Eternal development is Infinite future is Reality
from this simply because of the geometry of even the optics
you can see it

and from this it is clear
that's what it is, the more it is stretched out
a system of external negative action
I always take the extreme
I am considering such a system
in this case, in this part of the lecture

what are we dealing with after all

with some negative or extremely negative
if you want, the concept of "negativity" is no longer fundamental here
what form is negative
a person should still be alive and healthy and live forever

i.e. the result is the form of intensity of negativity
in principle it doesn't matter

i.e. the person understands absolutely clearly
what he overcomes
management structure in any case

and this information seems to be moving away
it is minimized and becomes point-like
and that's all

and when he displays it as a dot
then it turns out that the point is like
and the root
and each component of this information
and he recognizes her
i.e. image recognition occurs

as soon as image recognition has occurred
the system is fixed
those. static image
where does the negative and the image come from?

and then the property of Love is needed
i.e. to make the image compensate
in the structure for example there is Love i.e. to balance it
or in the structure well there is some kind of target management there
it depends on your goals

"targeted"
i.e. well, just bring it out to a neutral level of Perception
control
to the area of the control structure
where is this object balanced ?
Well For example there is Eternally developing

we work in the structure of Eternity like this
that any object is output
into the structure of Eternal development
anyone, let him be the most negative there, so to speak

and therefore, as if proceeding from this

the technology here is actually very simple
that means quite a large number
external influence , as it were
concentrated into a point
and we round off the impulse
and we output it into the usual system structure
namely, Infinite development

it turns out that we know the way
How can we just get control?
before this channel yes
to some point that we know

and any chaotic management results
we are taking it to the control point

God does the same
He has any structure of any management
leads to a point that is known to him
and this point has all the functions

Well as if at the first level He Himself possesses
all control systems
but in principle it is like a fragment of his Consciousness

and He transfers His own knowledge
no, it means some kind of system
which is the managing one
as soon as the whole world seemed to yes events
or there is a so-called "sink" of events
hits this point as if the most intense glow

i.e. in fact
in fact, the system sort of receives
some external support
in the form of creative knowledge
in other words, he has knowledge
how to further develop and be creative
this system

and when she starts to get into such conditions
then naturally a slowdown occurs
synchronous slowing of information
Next comes the background level
and the problem is actually solved

By the way, this is what I showed
it is a very intensive mechanism
to counteract some influences
on the body
so extreme
there, for example, toxicological radiation
or or there mechanical any in principle yes

of some complex diseases
which are chronic there
here is what is quite clear here you can see
what does it mean Well, a chronic type.
this means some kind of growing system
and it basically concentrates some kind of control

if a person is completely healthy
he can't possibly have it
in principle chronic diseases

then he has a need
still, it is necessary to use it sometimes
a system of extreme adaptation, so to speak
so that there is no impact yes
there is a random character there
or there is a malicious nature but
but in general which is comparable
with some kind of harm to the body, etc.

so it turns out like this
well by the way as a means of preventing terrorist attacks
if such a person
possessing such technology
it turns out to be in some object there
Well For example there is an object, a building, a car
it turns out that there is no terrorist attack happening around him
because it has precisely protective functions

i.e. after all, it's near
it kind of creates this dynamic field
to other people
and in fact his task is to not let anyone in
a system of some kind of terrorist influence
as if close to myself yes

and it turns out that he is still forced
it is still extremely difficult to transfer knowledge in this case
very fast

i.e. well, it may be naturally implicit
He usually won't walk around with a megaphone
and it should be at the management level
output so that the control is balanced, for example there
if this is a store
or some kind of cultural event, so to speak

then it turns out that where there are a lot of people
he must also be able to convey
this adaptive control function
to all

and here a problem of the following nature arises
he can reach a kind of telepathic level
clearly recognize
where is the level of people's perception

i.e. where people understand the same
his thought
how do they understand words

this is where people understand
the same way they understand a thought as a sound and a word there
like the word itself

"the sound of a word" is still a different concept
you can listen to the sound and understand with your Soul, for example Yes
in the form of a structure of precisely harmonious management
in this case we see the structure of harmony
when we listen to the sound of a word

and when we listen to the word itself
actually what does it mean there
we see more of a logical phase of management

after all, words can be controlled in different ways
you can control the sound form
there you can use light form
you can control the nuance of a word

i.e. the vibrational or light characteristic of the word
it is highlighted in some area
you can make it more intense

then the word shouldn't be touched at all
then comes the management
not related to the word itself
but it comes from a specific word

this is how god does it
how does he create neutral information in general

because it is neutral information for God
this is also an element of creation
you have to be able to create it somehow

This is what we ^{kind of} think
does it mean ^{from a management point of view}
well by the way not only ^{how it turns out} people in general
here are the controls
who are closer to people , ^{yes}
in space time
Well, they ^{don't} have any
some kind of integral system of Perception
that there is some information
expressing something

and here is neutral information
this question is quite ^{worthwhile} as if ^{rarely}
here in management
because the information doesn't mean anything
where you can put ^{any} system and build it

this is where it works
that this is precisely this neutral information
this is also a factor in construction
for God

and when we are in a system of some external reaction
let's watch
such ^{as there} God makes ^{well} the structure of the reverse reaction
i.e. how does He make information neutral ^{yes}
at least for starters

i.e. if you have
for example ^{some} ^{well} like a hemisphere or something
some kind ^{of} even in the form of a thin border
like some kind of film that is neutral
then any other information is external
she ^{basically} if does not overcome this film

as if it doesn't bend the film conditionally ^{yes}
as if a luminous region of some neutral environment

then it turns out that it is a neutral environment
functionally separates problems
here is one problem
some kind of calm system
and neutrality is needed to determine the coordinates
some system is obtained

i.e. neutral system
it's ^{like} a logical transition
in high-speed systems
this is a transition from one concept to another

here is a solution to the problem
is there something that gets in the way ^{yes}
or is there some kind of growing
or ^{is there} an existing problem
and it needs to be solved

that's when it works out
which is still the limiting level of reactivity
as if the first wave of Perception
it's still a neutral level
First you need to understand the system

therefore the human perception system
is largely built
from the system ^{well} as if such neutral information
where the differentiation of objects takes place

i.e. if there is no neutral information
then there is no differentiation
we don't clearly consider the functions then
or we ^{do} n't want to do it, ^{yes}
by this we express that we do not want
differentiate an object

and just as God does
He is from a neutral system, ^{so to speak,} neutral ^{yes}
creates the entire structure
i.e. in the core of each system
there is some neutral source
which turns out to be uninformed

by and large

the further the system is
from the center of action
the more informed she is

and here is one of the management tasks in this case
also adaptation to some can be extreme
or it could even be a static system
in this case already
this means work on investigative systems

there is some neutral information in the core
and it is the densest, the most intense
basically she is nothing special, yes

if we work on the meaning of the word yes
just above the glow of the word
the word itself can be very clearly fixed
and work on its optical expression
no matter how much they worked on it, no matter how much yes, that's right
with this level of control
anyway, the word still fixes the form

and for different types of Perception
Well, it has some kind of universal property
in the World

it turns out that if we are a collective Consciousness
let's consider it as a set there for example verbal phase yes
meaning a certain outline of Reality

which is perceived by people

and let's consider
how does God look at this word for example
how does he perceive it in general
here's if you ask the question
how god perceives the word
people for example Yes

He sees what every person thinks.
about the specific word yes
it turns out how He perceives it

and if we begin to perceive this
then we get a neutral level of information again

i.e. from the point of view of logic here

that there is common sense in the reaction to Reality

it's the ability to just react in a normal way

For example, there is a possibility of a global nuclear war
then we need to react and make it so that it doesn't happen

i.e. this is a normal level, as it were

well, the usual level of common sense there, let's say
there is nothing special here
there is a situation
it needs to be solved

and it turns out that we react
when the situation is manifested
through some kind of neutral level, so to speak
which, as it were, localizes Reality
i.e. makes it autonomous

and that's when we start thinking
why then didn't God do it for Himself there
Infinite Reality and everything for example
from the point of view of well, would He have done it, for example? there are people
there yes
expressed in Infinite form

it turns out that it is localization
gives the ability to manage
i.e. it is precisely the identification of the form yes
there is a form "man"
and he can think, walk, do whatever he wants in principle

and it turns out that based on this
just like there is the word yes
and the original factor of the word
this is an action close to the form
and we can work
and with chiaroscuro there
and with accentuation of the word, etc.

we can consider the same thing
how united is man
with the concept of "words" after all

this is what this word means
here's how to do it so that the forecast doesn't concentrate
it cannot be objectified for oneself

i.e. there is some negative information yes
possible
or the one that is not needed
it doesn't necessarily mean that it's radically negative there
you just do the management
you don't need to fix the forecast
some kind of negative
and you need words
which mean this forecast
have not established themselves in the phase of collective Consciousness

this is again an adaptive function of your control
you adapt to the environment in advance
not allowing this environment to be realized in a negative status
i.e. you do not form a verbal context

where God passes
there it is always free, clear, there it is always simple , yes

you must make it in time
do as God does
before the formation of the verbal phase

and then it turns out that you are kind of constantly
keep control
at the level of one's own task

and here is the main task of management
just in this case
it is precisely adaptive
you have adapted once to the external environment
and that's all

and you are in this management
keep some kind of structure
for some time yes

but if the task for example exists
if, for example, it is not implemented
then it turns out that you continue further
to exercise control

i.e. management must be increased
and in principle until the moment when it
Well, it's not needed there anymore
the task changes and the management structure changes

some next event happens
the following control systems
immediately appear from somewhere

there, let's assume, a sound form appears
so the control has one configuration yes
and control seems to arise
in the form of concentration of the external environment
i.e. a person begins to observe
that the external environment is reactive
to his reaction level

i.e. it sort of configures itself
depending on what's going on around even

i.e. the environment has the property of reaction
to an external system
in relation to a person

i.e. there is a system that is close to a person
and she helps him for example yes
this faction of the collective Consciousness
aimed specifically at Infinite development
it is always collective help

Well, let's assume there is help there there are holy progressive personalities
there is help from the Soul there
some different help systems
explicit or implicit
or simply there a person came to know the World
and knows how to control Reality

but there is still some secret concept
for example we can consider
Well, such a system of knowledge
such as there is "Soul of the World"

there is Peace there
and what for the World is comparable to the Soul

i.e. there is a God, it is clear there
there is an ordinary person who has an ordinary Soul
that means he's just God

and this is what the "Soul of the World" is
here's what there is
what is comparable to such a concept

and as soon as we start
how to increase the structure in management

then initially God is still preserved of course

further we see that the Soul
or what corresponds to the concept
"The souls of the whole world"
This is a structure that is very reactive.
per person
This is the closest structure to a human being.
in terms of knowing the World

i.e. it is as reactive as a human being
on a deep sensory level
because it is also a sensory level
the further from a person
Moreover, it is controlled as an investigative system

and if we look at management for example further
then it turns out that well, such a concept
as we say "Soul of the World" yes
or it is possible in principle to introduce the concept of "conscience of the
World"
but it turns out that conscience
it is still a collective structure
and the concept of "Macro-conscience"
it is a fairly neutral concept
for one person

there is a conscience there of one person personally
but when there is a lot, it becomes like a level
some kind of adaptive property again

i.e. "conscience" as an adaptive concept to a person
i.e. aimed at human life in essence
conscience is a functional structure in this case

and when exactly everything at once
they have some kind of generalized conscience there, yes
quite an unusual level of responsibility, I suppose

after all, each person is personally responsible
and if we have a common conscience
it comes out in the signs of morality there ethics

and it turns out
that this is already a superstructure over conscience as such there Yes

i.e. the carrier is one
still, it's still a specific person

and when we look at Spiritual development
what is there Spirit of society yes
that's clear The spirit is immediately clear by the way
there Spiritual development of society there or civilization
precisely in the Infinite development

it turns out that in the structure of Eternal development it means
we must be able to translate
one concept into another
but not all of them in a row, but at least those that are
Well, at the moment, yes, we need them
although by and large we should be able to transform
one concept into another in principle any

at the management level we must be able to
see transition systems
there with the concept of "conscience" there
in the concept there is "action of the Soul" for example
in general, be able to translate different concepts
to the management level

then it turns out that when we have a task
some kind of universal level
then this external environment, whatever it may be
whatever it may be
it falls into a structure similar to that
which a person faces
when he sees the whole Macrocosm

i.e. the Soul of the World is comparable to that
that the Soul of a person is a personal trait, this is a clear sign
this is the real Soul

and the Soul of the whole World is like an external reflection
on the Soul of man

and when can we translate in the external environment
any phenomenon into any other
then the external environment it can no longer be
Well, dangerous actually

i.e. it turns out
what if it is ^{like} controlled very quickly, ^{like} in advance , yes
well at least it would ^{mean} if a person
I paid more attention there
and would start managing in advance
then it turns out he would always be able to get out of the situation
at the managerial level, ^{it means} actions
and always keep under control
well, such tasks as Eternal development ^{for example}

only because of the positions of those that he is considering
that the same way his Soul perceives the World
the World perceives him in the same way
Well, that's what's called ^{for example} there is the Soul of the World ^{yes}
in context
well, some kind of mirror is not even a mirror
and ^{as if} a control display
similar to geometric figures just

from here comes the light concentration like a kind of cone
and there is the external environment

and that's where the refraction of this light occurs
some narrowing of the cone ^{so to speak}
this is the control point
which is understandable to both sides equally
neutral point
God's point actually
^{it means} in Infinite Action

i.e. the Infinite Action of God
it is a neutral value in this case

so we go and say
that God's Action is Infinite
^{well} okay then what exactly
Infinite action is a neutral quantity.

i.e. the more we cover the element
all the more so we neutralize the system

then the following axiom is obtained
^{well}, even a certain postulate
which is obtained from the axiom

that the more events we have
we simultaneously consider in Perception

the more we localize the system
we make it more concentrated
more manageable
in the center of the event

i.e. it is enough for us then
find the center of the event
What is this

if this is some kind of well for example, there is some kind of impact there
there in the form of some substances for example
we need to find some kind of center there, let's assume there are nuclei there

if it is a structure
in the form of some kind of disease in a person
then we need to take a look
so firstly does this structure relate to it

i.e. there are signs yes
but a person can be healthy by the way
i.e. he may feel unfavorable there
but in reality he is, for example you can't get sick there
i.e. we need to look
what is around it, generally speaking

how did he even get this information
i.e. is it his at all?
i.e. is it connected with him?
or he just perceives the signal

i.e. here we can further differentiate
system

if this is well For example there is an ecologically harmful impact
radiation or some other substance
then it is very easy to see the structure here
Well as if a kind of adaptation

in what sense
man unchangeable level
just like God for example
He always has the same Body.
and he does not change as a species , let 's say as a person
It doesn't mutate.
It is not subject to time change there.

a person must act in the same way

i.e. he should not allow
is some negative environment ^{there}
to somehow change oneself

it turns out that he must find
there is the center

Well For example there is a nucleus or some molecule ^{there}
and only from the management of this environment
restructure the entire Macrosystem

i.e. here we already have a local level of management
in case he can't get sick, ^{for example}
Human
but feels ^{somehow} unfavorable
need to see
what is this element of Perception connected with
why does he perceive this

i.e. somewhere means the outer border of this World
^{as if it were bending}
and it catches more signal

i.e. here it is necessary, by the way, it is possible to find
these are the characteristics of people
that ^{for example} a person cannot get sick
he can't get into an unfavorable situation
Well ^{as if} some extreme situation

Well, actually, he always has a certain Norm
but if suddenly something starts to happen near him
then we need to analyze
maybe he just perceives the system that ^{way}

but in reality it is in a better ^{condition} , I think
from the point of view of all objects of the World

and by the way this is one of the principles
also restoration of man
human health or his affairs
the ability to develop that position
what do we find
more ^{seemingly} efficient systems
his personal interaction
with some external environment ^{there is} a segment of the external environment
where, for example, is the information described or available

well, conditionally "scheduled", so to speak, in quotes
or it is possible on paper of course
but it should be specifically described

there are such fundamental things
what is written there for example "practically healthy" yes
if he had some problem before

or he decided some things
or is it just your control

that's when you tie it up
the light is like optical
this light is a kind of diagnostics of the external world
coming from a person
with positive external systems
then such an appropriate environment is formed in him

because it's right here
on the one hand it may not be
the need for high-speed control
because it works out
that a person, in general, according to logic, he
Well, that's how the control works from itself
what if it gives a control impulse for example
on some Wednesday
it is not necessary that the environment is somehow controlled by someone yes
or or the impulse is modified
this is naturally not always the case

It often happens that there is a control impulse
and it is implemented with virtually no interference

and that's when we start tracking
how is this quite an interesting moment
how does such a management structure even arise ?

then a logical factor arises
here is the Soul of man
immediately brings out the logic, so go ahead
and the thought arises
well , now everything went smoothly, no problems
but logically there may be other tasks
logically it turns out that a person can very well have
some third systems of influence there , etc.

and so the person begins to often invent things for himself
control system
and here the main thing is to identify then
why does he need a person at this moment
some kind of extra complications to organize for yourself

i.e. well, this is quite a common point of view
that nothing comes without effort there
you have to work constantly
and all the time only then in a certain case
there arises a control context

more systematic let's say yes more radical
for your task

Well, first of all, this
from the point of view of Macrosalvation it is not so at all
because you have to be able to save no matter what
he has persistence, a person doesn't or he's asleep there
or talks whatever he does
he must save anyway

i.e. there is a need
generate this light-pulse level
at any time there by any
well, at any level of action, I guess
in any condition

it turns out that more arises here
namely a systemic feature
here if we consider the Action of God
He created the world
and He needs to be taught
It creates a learning factor for other people.
where by the way there is still no destruction
a person himself simply does not perceive the task
or it is not fully implemented there
he comes out as if into the phase of his own Thinking
and then you just need to
reflect Thinking to the level of God's Thinking
and in this case it will be clear
what will need to be done
i.e. the fewer mistakes a person makes

from God's point of view
a man is always free
Does he have no moral sense ?

or internal principle
the concept of "errors"
i.e. it is always his personal path
human

here from God's point of view
man he makes no mistakes
he just chooses and does something specific

and it turns out that in order to choose correctly
he must do something well How can I differentiate it ?
specifically here
what to do at every moment

i.e. a person is responsible for all actions
but from the point of view of Eternal development
he must respond with the following development

this is the reality now
that he shouldn't be punished there, for example
that's how it would be , that it would slow down his development there
towards Eternity

He shouldn't die at all, for example.
and it turns out that in this case it is a mistake

i.e. in this case it is just
the following system of knowledge is actually
i.e. which one well then it already contains a solution
as if compensating for what was perhaps called a "mistake"
or from the point of view of the current logic of Perception

and it turns out
that this is just the development of the next level
i.e. for God it is the transfer of knowledge
which, for example, are expressed in some actions
comparative actions

and that's how precisely a person will learn
compare
why does he need to have some problem
what would what to learn

Well, there is a signal from the future
Well, you can learn to do it like that
so that there are movements

less, as it were, in terms of amplitude of light
scattered

i.e. try to pass the controls more calmly yes
as if a few with more
as if at a controlled level of action or something
it is precisely in the amplitude of light

then here is another element of the solution
in adaptive control systems or something
where you are adapted i.e. calmer
adaptation means you were able to develop
in this case some resources
reactions and interactions
and calmly go on your way as if further

and these developed systems
they react at the right moment
and actually, they don't persuade you in any way
out of the way

and here it already arises
so radical enough
there is a target level of management

that the signal is already coming
from the system as if yes, some kind of one you don't need
or an aggressive system
it already contains
structure of the solution to the problem

here, pay attention to what he starts
how would you like it so to speak, help solve the problem
from the point of view of its precisely harmonious radical solution

i.e. here is such an unusual function
appears
external control space in this case
that some kind of well, including even aggressive
or there is a negative environment
carries out self-regulation functions yes

logically it is clear
as soon as you show
power factor in management

in this case it is still a force factor
for the external environment
because you still end up doing the management
you are still moving towards your goal

and these are some kind of structures
who are trying
or modify or disrupt the controls there
or slow down your development speed
right there for example there in Macro-creation

Well, they're starting to deviate.
but they still differentiate the system
like the fact that you still have a power level
you are always moving forward

and then they begin to change
and start sending a signal
on self-regulation

i.e. what needs to be done in relation to them

This is where you need to be more careful
because there is, well, in these systems
laid down
any structure including some trick there yes
that they allegedly go for regulation

I'm speaking in general now
just about systemic levels of information
although this is typical for people there, for criminals, etc.

and when you start to recognize the signal
then it is important to shield it here
i.e. not to give him the opportunity
be a control signal
although this signal seems to carry functions
some kind of help even

what is important here is that any structure
which is perceived as external in this case
if there is an aggressive context
it should still be controlled by you

i.e. even a seemingly positive signal
according to the structure of some assistance to local government

can't be taken as a structure
which you want to perform ^{yes} or are performing
you still have to push your signal
i.e. its own management system
it doesn't matter ^{, even} if it's a forecast phase
This system has an optimal

i.e. it means that any ^{well as if} aggressive
or ^{there is} a situation that has to be dealt with
apply adaptive functions
it is such that you will have to apply functions
constantly to her

i.e. there are just issues being resolved
you don't need to adapt everything is going fine
then there are no problems then everything is balanced

but if it is precisely the adaptation functions that have to be done
i.e. all the time there is the development of systemic properties
then you should continue
still the system

Well, I would say a few, even.
to impose ^{there} or continue their control

and here, well, ^{it's} not like there's an imposition
the system should still accept it freely
your level of management
in essence, it is still impossible to impose anything in reality
only if the system accepts this level

then you just need to reverse this signal
once you start ^{to} use the signal
you just take it
and ^{as if} mechanically you turn it over to your side
at the same time you say that ^{it's in management} or something let's say so
you say it conditionally or just do it

naturally it's better not to use it
in this case the words
just work in light optics
and here comes the front line of control
take it and insert it from the back side
your management
it looks like some kind of flat
Well, this design is closer to a circle ^{then}
and you just take it and turn it over
its level of management

i.e. there are your tasks
the system perceives them
and you turn it over and send it back
i.e. you don't lose control at all

when you start to see
what a system For example there it starts to react
on such a structure
then, in principle, as a rule, the tasks become thinner
at least for the time being
and the system is leveled to the background level

i.e. well, in fact, there was no impact there , yes
there was no negative impact
you have adapted
well, in fact, not through some kind of adaptation to the system
but on the contrary, you adapted as

that you have developed a control mechanism
and therefore here in the structure of adaptation
It is important to always introduce the following meaning
what does adaptation mean you control
you are not adapting
you don't kind of adapt to the system
and you just have time for everything
set up your control mechanism
and this is called adaptation

but you keep control over the system anyway

and then, as if regardless of that
what level of the system how complex is it
super complex or some kind of progressive developed
it doesn't matter
you enter your control all the time

because that's the principle here
if you were able to identify it there
structure in humans
that a person there cannot get sick, for example Yes
he is always healthy then

but there may be some external situations
and then we get the principle of adaptation
i.e. management in any case
still needed by a person

i.e. firstly, a person needs it in principle
who may have a disease ^{there}
then he must take control
and restructure disease information

and it turns out that in this case he is
in principle ^{it means} it can't be lost
management level until it is cured there ^{yes} For example

or he doesn't want to be sick ^{there}
or ^{somehow} be in a painful state
then he must future situations
straighten

after all, from the point of view of the technology of Eternal Development
the task still remains
Well, in fact, she looks radical, ^{yes}
but often this is a private task
i.e. in a particular case the person must be healthy

and when, ^{for example}, he starts to perform this task
from the point of view of Eternal development
it turns out that any splash of some kind, ^{yes}
it is perceived as some kind of nonsense
there, ^{for example}, a person is aimed at Eternal development
what if he has some kind of disease

or some action happened, ^{well}, unfavorable
or in general something that distracts from the main task
Means ^{well}, which would be perceived by a person
^{for example} as negative
and which I would not like to happen

from the point of view of Eternal development
when a person begins to see his prospects
there in Infinity
This of course always raises a question
why such a level of events
Well, that's how it manifests itself
in general, how to regulate this process

because from the point of view of Eternal development
standardization should in principle occur
best in advance

or at least it should be a process
fairly balanced

Well, imagine Eternal Development
a person must be able to
such a colossal number of situations to overcome
and here, out of the blue, there, as if yes sometimes
in Human Perception
although it is always possible to trace
where did it come from really
some problem arises

it turns out that we need to naturally see yes
the root of the problem as such
and it still has to be decided
i.e. it doesn't matter until we decide
there are some current tasks there, some long-term ones
local private ones there
or tasks there for Saving the World but personally their own

it turns out that we are forced to anyway
Well, we'll decide anyway
i.e. we also solve private problems

and when we see, for example, that private tasks
accumulated as a means of knowledge
here again to the point of view of God
that it is adapted to a person
already the world
this is the level of human cognition
of this world

i.e. adaptation consists of
what a person is looking at
your own future development for example
as a task well in general, it is precisely in the Infinite Development
as my personal task
and already invests its resources
just my own
there is such a level here
that he basically displays the task as his own

and that's when it starts to interact
with the whole outside world
then he begins to see, well, at a real level there
what should he do now

this is generally perceived as some kind of work there, etc.

and then such a level arises
what does this mean here as if some
such a human and ordinary level
is brought to the level of Infinite development

i.e. a technologist who already knows how to develop forever
according to my Teaching according to my management system
it falls into the structure
ordinary everyday perception
due to the fact that this Macro Light of Infinity
starts translating it
into the structure exactly like, something normal or something
that a person should not get sick there
he carries the whole structure
in general, the external world, yes
in management

and this World is manifested by that
that it causes such pressure
Well, a person should work there.
there may be fatigue, etc.

and this level is like this
what is becoming clear
why are people there for example they get tired
i.e. why do they perceive
some elements are completely everyday, as it were Yes
from the point of view of Eternal development

and only when we consider the Eternal development
then we see why they really get tired

that's when this huge light and endless events

starts to run into some problems
which are not resolved or are resolved with difficulty
or even arise at all

then here the logic starts to work very quickly
because in essence a person is to a greater extent
reacts
on the structure of one's own Thinking

even logically
where did he go what did he do or just did something

and ^{well,} that is, from the physical level to self-government
to some information management systems

it turns out that it is important to consider here
what ^{well} For example there is human thinking
or ^{is there} human action
these are systems where too
^{Well,} the question is precisely about the pressure of the Infinite Light
on these systems
this question in a certain way
regulated by man
i.e. controlled by him
here are already personalities in their purest form, human personalities

We have highlighted this now
personality in its purest form
then adaptation is infinite

as soon as we see God
then it turns out that God has Infinite Adaptation
It is already adapted in its natural state, ^{yes.}
He's already in control.
and He is already in the norm

and the same thing we came to the personality
which controls
the structure of one's own Thinking

then it turns out what she is
it turns out that thinking and personality are inseparable
this is a single level that is comparable
with the level of God's Action
with the level of actual Thought and Action of God

where is the Soul of God
The Thinking of God
^{there is} Reality generally speaking
which arises from here

this is a single level

For God, Thinking is already Reality
He thought about the man
there is a person, ^{yes}

He thought about the tree
the whole world is there

he is
because at that moment He thought

and from this point of view why is the World Eternal

because God has already thought of it
we are already here yes

it turns out that from this point of view
it is clear that the world is eternal

The Eternal God has thought of it
and this is what came out
Eternal construction of the Eternal World

and from the point of view of this management
which I just showed you
you need it in practice
exactly to enter this state
to this control position
when exactly did you clearly identify your own personality
and accepted
how did god make reality there

then it is precisely the adaptation functions
this is a state of personality
and there any speeds can be overcome externally

i.e. the personality is decisive yes
personality acting
and everything works out for the individual
because personality
This is also what comes out
to the Infinite World

and the whole Infinite World is then largely controllable

This is where I end today's seminar.

Thank you very much for your attention
