

GRIGORY GRABOVOY
The Teaching about God
Dynamic control system
17.02.2005

Hello again
the topic of my seminar today
This is my Teaching about God
Dynamic control system

in this topic i show
how at the moment of control
when a person is in conditions
environmental dynamics so to speak Yes
optical sphere, etc.
how he should maintain control and implement his tasks

i.e. the first element of this control
is that at the moment of control
characteristics of the information object
it can often be undefined

i.e. there is a certain optical focus
or there is a management sphere
some controls
and from afar at high speed
primary level of information
it seems to be vague

Well for example when a person drives a car at high speed there
then external objects can somehow rush past without differentiation yes
roughly the same principle for dynamic systems
when external objects may not be differentiated
or the primary signal can be generalized

and when this signal moves towards a person
precisely to his area of Perception
where he is engaged in controlled management
it may turn out that there is, in principle, a completely different area there

i.e. usually, well, if we consider the control option
when there are some options for discussion, let's say
some elements of counter-control there
then here the primary area can be fed
at the level of the entry system, so to speak

to your area of information
and then open up on the other side

i.e. it means that in dynamic management
such areas may exist
not always but they can exist

therefore the first element of dynamic management
is to identify undefined areas
first of all as an axiom
and identification or ^{there is} an expression of status
determining the status of this area

i.e. you have to keep up
besides what you do management
and also means to control undefined areas

that's why here in the axiom we work like this
so that the following for this area ^{for example} control
would be differentiable
those. we could clearly
^{means} to make management depending on the forecast

i.e. in this case it is very necessary
so that predictive management can be developed
when we know exactly what we get from any area

i.e., generally speaking, you can see the area in the management
This area is actually bypassed in management
see what comes out of it in the future

and the future design
it is always connected with the Macro level
The soul always reacts to the Macrosystem
i.e. it is connected with all external information

and once we discover that the future is fixed
i.e. at least we will stabilize the management
and we see our own events as favorable
or are they normal ^{there}

and then it turns out
an area that is not identified ^{as such} yes in dynamic mode
she becomes controllable
at the same time, the area itself becomes ^{understandable later} , yes
^{as if} Well ^{there} retroactively
or ^{as if} by some necessary actions

let's assume there is some kind of fire
then the fire is it, well there is no way to get around it without putting it out, yes
i.e. there is some negative event

and we just have to look ahead right away
to find out who needs to be saved now

i.e. looking ahead allows us to understand
and also the details of current events
in a dynamic object of information

then it turns out that when we
for example, we make control in dynamics
then the selection of this very area of control
where we have exactly means the development of a dynamic system
this is the primary level, so yes, actions
namely the level of recognition of the system and determination of its
properties

Next we must Macrosystem
i.e. an infinitely remote system of actual information
actually bring closer to oneself
because in a dynamic system
we have to move somehow yes
i.e. to create an element of dynamic movement

here in management the properties of management are as follows
that any element is created by man himself

and in this regard, when a person must
for example, create a dynamic system
he must first create the elements
comparable systems of perception
for example, a static system of one's Consciousness
dynamic or mobile, etc.

it turns out that he, for example, there if you look at it
from a human point of view
how God creates dynamics for Himself
He is also present in all controls.

it turns out to create a dynamic level
it means actually moving
near their own areas of information
and just fix some position

for example as static
the rest are dynamic if they are still moving
the third function of Consciousness yes

those. God creates dynamics for this
to suppose to recognize means
well, so that a person could recognize
His Actions

i.e. well if we consider
let's assume such an absolute factor
which arises from here in this area of management

what does it mean we have
almost the next level of management here
God created people in His own image
and if we consider
Well, why did God need to create, for example ?
then another Reality yes
He created people and everything

so that people develop
and if we consider such a model
could God suppose just leave it there
concentration of all matter in the form of light
there is God people
and in principle this could be enough yes

it turns out that He unpacked Reality
this this luminous point for that
so that there is a system of knowledge
the system is like some kind of dynamics and in motion
and so that recognition, i.e. an element of movement
was perceived
the first function of Perception

i.e. if you set the task
how could God possibly unify Perception?
how to build objects that are perceived
all people equally
how to build static object the same way
for example, a table is perceived by all people in the same way
like a table

so here it was necessary to fix it
some primary function of Consciousness

i.e. how to create a difference in movement
and here it turns out
this is precisely the identification of the dynamic characteristics
this is actually the creation of a static object

because if at the micro level
in general it turns out that in any static object
there is only the wave principle

and so it seems like well from the point of view of physical models
orthodox physics already knows
that we have in general a wave system yes

in solids essentially

therefore it turns out that the dynamic system
I just concentrated
and some kind of static was obtained

so based on the control function yes
so that the control is dynamic and as if static
simultaneously

here in dynamic management
the main thing is to develop a static system of action
i.e. to fix it and in the form of, for example, a certain goal
try to implement this system

i.e. here it turns out that if we have
let's assume well, such a development function
what does it mean we practically have to define the goal
like some kind of static
as a certain concept, yes, a static concept
then we must necessarily proceed from the fact that
that God when first created people
and initially organized the function of human perception
He had to make a point here.
what is a rigidly fixed goal
it is being implemented

i.e. He should have , well, actually , done it this way
so that already at the primary level of Perception
the man achieved the goal

because for Eternal development
a person must have any creative goal
actually achieve well almost immediately as if

by a single action, as if by a single impulse of the Soul

i.e., a single impulse contains
the whole system of all future development Infinitely

it turns out that he should actually achieve Eternal development
Human
at the primary level of its creation already immediately

it turns out that there is a single impulse
this is the whole Infinite impulse
his own development

it means he has no choice, the person has no opportunity
he cannot choose, for example, from God's point of view

means developing your Perception over a long period of time
you need to understand everything in one impulse and do everything at once

so it turns out that from God's point of view
this impulse is the first impulse of Consciousness
where He begins to reveal it
as a dynamic system

i.e. a person here is kind of forced to work
just like God does
he must create
and dynamic and static system
in relation to oneself

but then he must consider himself
as a level of both dynamics and statics at the same time

Well for example why does a person
there is blood moving or there is a heart working
Well , why doesn't another model of a person exist?
well in management

because it works
to create external system control
he is forced to reflect the external system onto himself
and create some dynamics inside yes

and when we start this process
how to consider
as a process of interaction
we can regulate very precisely
all internal systems

By the way, this is a very powerful mechanism
self-regeneration ^{there} self-healing
Well, basically, actually
healing any other person
by working with an external system
not even with the organism itself

and here it is quite easy to follow
connections between
precisely the element of Perception
this is where the first level of human perception is
is being implemented
as if a contact of human Consciousness
with external Reality ^{in fact}

and actually establish influence on yourself
and considering that the light-optical lever is high

then here comes and the influence is quite high
but in principle it is harmonious
because a person does not affect himself ^{directly}
i.e. he doesn't work with his own tissue, ^{yes}
and with external information

and you can work simply with information
not necessarily with events even
i.e. you can watch

in this case this is ideal
a design that is close to ideal ^{in fact}
system
when external Reality
is considered as an information environment
and simply working with information affects a person

i.e. we get there all the time this way
practically into the control area of information
and it is clear that there is information for a person
how is it born for a person at all

after all, a person can touch ^{it there}
some object
take it, create it, or ^{somehow} transform it
but what is the information about this object

after all, information can be another concept

you can see it here
that information is a reflection of an object
in the dynamics of Perception
here in the first wave of Perception

By the way, you can see it here
just geometrically straight
absolutely clearly defined
here is the vector to the first wave of Perception
gives this concept gives the information itself

those. object reflected in Perception
gives information yes

it turns out to be part of the information that comes from Perception
to a person as if to a Soul
to the inner state of the human Soul
it's going well touching there
from his physical body or there near the body

this volume is the same as the external environment
like a ray going, for example, from an object to a wave of Perception

i.e. the external environment is equal to the internal environment through
through this wave of Perception

it turns out that based on this
we can differentiate the object
all you need to do is know your own body
just logical reflection mirror reflection
through the plane of Perception

and therefore any other object
it means that he exists in the world in general
that all his information, i.e. all the information about this object
is inside the physical body

and in general, based on this
we can determine quite clearly here
control design
when we can regulate it means
well, the state of an object, for example, yes
with the state of the body it turns out

i.e. if we need to suppose to do it this way

so that the external object is somehow removed
from some area of information or close
we can regulate
by means of the movement of light optics from the physical body yes
i.e. regulate through the structure of Perception
we can take and move objects of information
about the object

i.e. we can actually modify the signal
which goes towards us yes

as soon as we modify the signal
That's exactly what I'm saying
about dynamic control system
information separated from the object
until it reaches the wave of Perception
we can modify the signal
through the system of universal communications
change the object itself

but it takes time yes
why am i talking about dynamics
dynamics implies action over time
i.e. we notice some action that is not static

because the primary wave of human perception
statics
and there is basically no time there
he just perceives the object

and it turns out that the Perception of the object
this is the creation of this object yes
from a human point of view

It's like it's for a person
God creates objects
always in fact as if anew
for each individual person
he perceives these objects because
that he, for example, drew attention to them
he turned at that moment the object exists
in his Consciousness

from the point of view of absolute systems of the World
This is done individually for each person

then it turns out why God does this for example

yes, there is, for example, a common system of Realities, yes
but God does this to show
dynamic function of Reality
so that a person actually knows himself
through the structure of the external world

and it turns out He is for every person
sets its own system of external dynamic properties

although people walk around all the time
Well For example there often in one place
see the same objects of physical Reality
but for each of them the object is formed as if anew
from God's point of view

because for God
what is human perception
that the object itself is the same
what Perception of one person
that the Perception of all people is the same

and it turns out that based on this
all external Reality is there some kind of yes
for God it is always built individually
for each event

then we get the main status here
it there anyway let's say God puts such a structure
keeps the controls static all the time

just imagine this all the time
we need to build a new structure
she is the same all the time

i.e. what kind of structures should there be then ?
so to build it like that

Well, first of all, by and large
It's not difficult to build it like this in many ways here
because the person who perceives
the design is the same
and believes that other people perceive her the same way
they can describe it the same way yes

he perceives their description in his own way anyway
because by and large

the criterion of Perception is
still , one single person

and therefore it is enough near one person
build the entire system of connections
and the design is kind of ready, yes
some building is standing and that's it

also around God all communication lines are ready
that's why everything rests on Him, for example yes in control

but it is enough for Him to work within Himself
within its control field

the same thing happens to a person once
put in control
there is some building, some event
I mean the same
namely objects of mainly physical Reality
where they are the same

as soon as a person perceives it once
then the next times it's all inside his system
and he differentiates them further, as it were
he can arrange a meeting with other people near the object, etc. yes

and it turns out that based on this
everything rests on
in fact, on the education of one specific person in essence
around which all other connections are built

and so it is done individually
near every person
in relation to each person

that's why God passes on his knowledge
practically well as if in a similar way
It gives the person the same control structure.

therefore, in dynamics, a person primarily works
with your own information
and creates dynamics through internal reaction
on their own tasks

and here it turns out that the meaning is that
what if for God dynamics is an action as if external
volitional physical

then for a person this action is still indirect

and he must also act similarly to God
he must create dynamics
by some activation of the internal properties of the Soul
For example there is a solution to the problems

why, for example, does a person have tasks
Well, let's say a person could develop happily
and that's all, at least theoretically
i.e. why is reality created this way
that he must be forced to solve some problems

so to do as God does
a person must create the dynamics of movement
by solving their problems
which are initially static

i.e. he defines some tasks
which he seems to remember ^{yes}
or he remembers or always knows
until they are resolved ^{there}
or are these tasks unconditional
For example there is Eternal development
or development on some environment for example there on the planet, etc.

and it turns out that based on this
there are formulated tasks
there are tasks that are sort of automatic
or automated existing ones
independently, as if from Perception, ^{yes}, as if

although they exist of course in Perception
but here a certain element arises
that some ^{well} is it a phenomenon in Perception?
when it occurs or is considered to occur
precisely some objectified Reality

and here is where we look at
it is precisely a reflection of one's internal tasks
then we create dynamics
because to solve the problem
we have to do something

and it turns out that it is enough to formulate the problem

from God's point of view
and everything else is just problem solving and

those. God created the World
when He set the task
then He created everything else

everything else is just the dynamics of development
around the task of creating for example
around information that is basically static

and if you look further, God would definitely know
that the World will be systemic
and in any case it will develop systematically
and will not be destroyed
then He is the Eternal God
had to reflect its own design
in this world
He had to know himself first, it turns out yes
Well, since He created Himself, He knows Himself, as if by heart
you could say that

but here the question is not even about direct knowledge as such
namely in that position
so that the World is understandable to everyone in essence
It should not just reflect it
He must also be able to teach the following
who will look at the structure of the World

i.e. and since God has a task
namely dynamics creation of dynamics yes
for the world to develop
then you get dynamics
It can only be in the structure
which is outside the human body

i.e. for God since man was created in the Image and Likeness
and including the physical body yes
and the physical body of a person is the statics of the World

and it turns out that this is exactly it
so that well as if the dynamics were recognized
other people

because by and large all people
through God's point of view

consider Reality
then He must provide them
My point of view, well, as a Person, yes
and that means they can see the dynamics
the whole outside world
then it is clear why God created man
in his own Image and Likeness yes in this case

in order to determine
static immutable control object
in information

and by and large
He created it not only for this
He created man in the Personal plane

i.e. He defines a person and well and considers
that a person has absolutely equal rights
just like He is there for example God acts
in certain situations
He gave man the same equal rights in his actions
i.e. complete freedom in certain situations

and in creative systems
He gave complete freedom to man.

and it turns out that there are no non-creative systems there
a person must be there Well, don't do it
there are weapons that destroy yes
do not make systems that destroy
then it turns out that he gains even more freedom

well here as if the principle of careless action , etc.
some kind of machine controlled by a person
or which is in itself
or which was previously created by man

and here it turns out that in essence
the original complete freedom of man

it is given by God yes
it is perceived by a person
Well, basically, like complete freedom
but here it turns out that the person himself comes up with it
system of restrictions
if it develops correctly
it turns out there is no system of restrictions

with precise correct development
means free choice of Eternal development
it's just a choice and nothing more
i.e. it is enough for a person to simply choose
that he is ready to live forever and that he will live forever

because then he gets there
precisely into a dynamic system
there is Infinite development

but here is just a question
it is to make the right choice
at what point in space
what time
and with what thought ^{yes}
i.e. make a choice technologically
and that's all
in this case I am showing this technology to you

when you start thinking ^{for example}
that "how is that possible in principle, just ^{yes}
just make a choice and that's it and live forever
more to think about, ^{really,} nothing special"

but it works out
that firstly, as I said, you still need to make a choice
correct technologically
secondly, the question arises here
that the choice of Eternal development
this is an infinite number of events
which includes ^{means} this is the number of events
and the education system ^{yes}
and the system of obtaining knowledge
this is ^{generally} a fairly large complex level

but the Eternal Man ^{yes}
created in the Image and Likeness of God
has the status of Eternal Development
and for him it's not difficult in principle
there inside the physical body to find such processes
which organize its Eternal development

or inside Consciousness
or there in general in the external environment in essence

because God He reflects the structure

to any point of information
and He develops there practically Eternally in management ^{yes}
from the point of view of the element of Consciousness of one's own

and that's why it turns out
that based on those controls
which are

Let's assume God ^{yes}
and in humans
we can say that it is dynamic
in general, here is the dynamics as such
this is the mutual perception of God and man

and that's when a person looks at the dynamics
This is what he sees first of all
in fact, ^{as if} the primary impulses of God
^{as if} into the external environment
i.e. God teaches him that in the external environment
he must first of all know

and then it turns out
that any element of Reality in dynamic control
it is not accidental before a person
it is a system of knowledge
Well, it 's logical and clear
that any system is knowledge

in this case i showed it
on geometry
on optics
and on the management structure simply
it's the same thing

and then we begin to see
that the Soul that perceives
all phenomena of Reality simultaneously ^{yes}
^{for example, by its very nature}
she can see the dynamics
as the dynamics of reflection
there is a very big past ^{there yes}
and at the same time connected to the future

here in the dynamic system
The soul can see both the future and the past
simultaneously

in one event

in one action

this is a unique property of the Soul
manifests itself precisely in management
through dynamic systems
where there is constant movement

because if there is movement
then the speed of movement
maybe with Infinite development
in principle somewhere it can become Infinite

and Infinitely means past future
goes at the same time in one image

and so that the object of information could understand this
it must be the person himself again
who is in his physical body
these functions are carried out

example, if we consider the process
a second passed ^{there}
how does a person perceive in general
or the physical body of a person ^{yes}
The soul of man
that's what a second has passed
how does this even happen at the level of information exchange ^{there}

logically ^{yes} the person thinks
a second passed
This is a logical point of view

but if we consider time
as a context of development
as a certain level of movement
then it turns out that this is not quite a simple ^{logic}

and even this is often not entirely logical
this is the movement of information
which is perceived as objectified Reality
where logic is a system ^{of sorts of} control
the system ^{means Well} as if the formation of some canonical systems
in relation to the external environment

well, like some kind of ghost of this environment
in the Norm of Perception
this is logic

i.e. the environment is one and then it ^{sort of} shrinks
is introduced into some canonical
some famous geometric figures
into some famous light
then it becomes a logical factor

but here it turns out
that the logic of the process itself is as follows
that itself, for example, is a logical factor
begins to transform the system of Reality
because there is a kind of ^{real} compression going on
information systems
systems of external Reality

and it turns out that as I said
at the Infinite distance in information ^{yes}
you can only see a person

and it turns out that based on this
we can already say, as it were, logically
that in any dynamic system
there in any environment where there is
there is a minimal dynamic environment ^{there}
minimal dynamics
the person already clearly and precisely has
the structure of the Infinite, i.e. Eternal development
and the whole mechanism of this development

and if we look into Infinity and want to know
are we even looking at ^{it correctly?}
where are we even looking
Well, you can look at the calendar ^{there}
which has been scrolling ^{through there} for centuries

but in one impulse how to understand
what we looked at in Infinity

it is possible due to ^{simply} Spiritual clairvoyance
^{there} Spiritual knowledge to determine
that this area is called Infinite Development

but in a dynamic system it is important to see
at Infinite Distance
static image of a person
and at any other approximate level

this is movement dynamics of man action of man

i.e. from God's point of view

man is always a dynamic control system yes

dynamic system autonomous

then it turns out that a person must have a function
which implements this dynamic system

even at that moment

when the physical body is there For example

does not make any active movements

this is a function of human thinking, yes

function of human consciousness

which works all the time

regardless of the position of the human physical body

and when we start to sort of understand

God's tasks are in this system in this design

then we see that many diseases, for example,

many of the causes of diseases there are in that

that is determined initially

static function of the physical body

and the dynamic function is there for example Thinking yes

they must be synchronized frequently

and ideally they should complement each other there

and if somewhere there is no synchronization

then the disease may begin to arise

i.e. you can see the cause of the disease

it is precisely in such a mechanism that there are, as it were, inconsistencies

are no connecting links there

or adaptive characteristics

are bodies there

Thinking

after all, it is logically clear if a person has thought of something

go where you shouldn't

or where there are some problems of danger

This is still a human system of thinking

i.e. Thinking determines

position of the physical body on logic

this is such a simple example when it is clear

that synchronization i.e. correct action

this is essentially what it means well, mutually- like adaptation, yes
such an environment as the dynamics of Thinking
i.e. and the statics of the physical body

when we start to consider
let's assume Well, such a process as the structure of Thinking

which exists in the form of information
as if it fits in there yes into the physical body

here, pay attention, you can see it
like a person's thought, for example , yes
a person has thought through a certain number of situations
and then he basically starts to see in general
that these situations are somehow perceived by them
not at the level of Thinking
and some next action
i.e. where does the thought go, to put it simply

so the man decided to just go there
well, just to some store, yes
he decided to do it and then he starts doing it
and then what action happens?
i.e. from the point of view of thought and the person himself

i.e. it goes like this, just watch
Here you can very clearly observe this by the way
and one can logically guess
that concentrated thought
which was in the form of optical glow
then it starts to dissipate
this light is kind of absorbed by a person

i.e., by and large, a person perceives
product of one's own Thinking
already in the form of diffused light
which does not contain a concentrated thought

i.e. a person goes there for example to the store or doing something
but at the same time he doesn't think all the time
like this for example there he doesn't repeat himself all the time
words
that he is going to the store
he doesn't keep it in mind
he doesn't keep it in focus
nevertheless he does it yes

what management structures operate further
then per person
from the point of view of optics, it's just a process

then it is the neutral light that acts
which came out of this Thinking
and this light which seemed to permeate the body of the person
or was absorbed by the human body

he organizes the further development system
this person

Well, it's not necessarily a store there .
or some third situations
but it could be any situation

and here it is important that in human thinking
must be very clearly differentiated then
what if these are some tasks
unattainable as a person thinks yes there
well, distant galaxies or some complex tasks

it turns out that he can block these tasks
and not allow the system of development of Thinking
in that area yes
although in essence man is free
he has the right to think, well, constructively, yes of course
here is the full right granted
for creative thinking

so what if there is something non-creative there
Of course a person can think
but in principle here he should think then
about the consequences
how to think about where such Thinking will be realized, etc.

and here it seems to work out
that he has of course a certain choice yes
freedom
but this freedom is always limited
if it is not a creative level
system of possible destruction from this level
i.e. narrowing of information
the information is still narrowing down
and it will not receive much development

namely, creative Thinking
has infinite development

and that's when a person sees
that this area is like Thinking
begins to permeate the body
this is what is important in this technology
to determine precisely the dynamics of this light
it has such a bluish sometimes silvery
often such a somewhat monolithic shade
as if silvery, such a purple often even

you can even see it in color
how does it go after Thinking
there is a structure of scattering of thoughts
and the absorption of this structure by the human body

if this process can be established
at an intensive level
for example, when a person works a lot
he can build thought forms there yes
which relate to work
and at the same time he often doesn't notice fatigue there, for example Yes
why is this happening

in a normal state, for example, he can get tired
when he doesn't work there very much
when a lot of people sometimes get involved and forget there
about food for example
but nevertheless he still feels better there, etc.
really there physiologically

People often say for example
that on the contrary, because of this , well, they consider themselves healthier , yes
with a lot of work

there is such an aspect here
like the same mechanism again
it means the output from this glow to a person

Well, it's not necessarily work by the way
it could be simple
correct Thinking, correct rest, etc.

after all, a person is resting
when he statically fixes the thought of rest

and constantly receives the same structure
this light yes

it turns out that it's the same as God does
in this case, a person can receive
there is food or part of food
only through Thinking
it is enough to think through the situation
get that glow
and that's all

By the way, this is also a powerful level of human rejuvenation
because if you learn
the thought that gives
Well, it's a peculiar diet and organism

means to saturate all the time with a more concentrated level
i.e. how to raise it vertically higher yes

then a person slows down age-related development
and then can be rejuvenated due to that
that the higher it rises vertically
Well, the higher it goes, the more concentrated it becomes.
so the area is actually like that
well the first and the next impulse of Perception
that's what you can call it

the more concentrated it becomes
how does a person's ability become
receive well, this kind of signal yes
and send a dynamic signal back

because here it is still important
what in dynamic control systems
it is important in principle to have interaction of signals

i.e. a person must take, for example, some information yes
and then send a signal that it was received

because that's how the exchange system works
with external information
a signal is always sent back as if

i.e. a person always shows God
that this action has been performed
i.e. it can certainly be there
sometimes it is a special action in the form of prayer, etc.

and it turns out that this system of interaction
as if at a signal level
when a person shows
how and what did he do
this system is very clear
well, it records some negative development systems, yes
they are clearly defined in the information
and separated from the system
namely the creative level of management

and therefore it turns out that here
Well as if from the point of view of the logic of the process
we can always not not creative systems
align to the level of at least neutral systems

because it is precisely in the dynamic control system
systems, for example , destructive ones are very clearly manifested

the fact that they are generally in geometry in general
even from the other side of the control

i.e. it is enough to highlight the management goal
and you immediately diagnose
what can influence the goal
some external situation yes
let it be deep
somewhere in the information space in the future
or is it not the point here often
the main thing is to have time for transformation yes
this situation

and here it turns out that we can influence events
i.e. having set the management goal
we clearly identify it right away
negative characteristics
and we do the management
we compensate for these negative characteristics
some process and development of information

and at the same time, with all this, then control becomes easier
i.e. then in the dynamics of human development
it turns out that at the same time
does management all the time

and that's when you learn
do management there or pre-management yes

predictive management
as if in front of a dynamic environment
then in principle the management problem is solved for you

because then you will be able to
to any static area
enter the control factor you need

because it is a static system
always well as if more passive, yes , you could say so

and it works if you have time
construct the course of events in dynamics
any static system
or at least that system
which looks static

and then it turns out that we can clearly say
that any dynamic system yes

it is actually a control system
some kind of static system in this case

and management of a dynamic system
it is always the management of some system
which one well as if a guiding and controlling system

dynamic is considered in this case
as a control system

and indeed, if we want to understand
in any moving environment
what does this environment influence
then we have to see
connection of this environment
with all levels of management
with some objects of information
in principle, as if in essence with all objects of information

and it turns out that then all objects
naturally give a certain signal
on this system
like this Wednesday
and we are then simultaneously doing that
that we are forming an impulse

in relation to these systems

i.e. we are actually engaged in management
through primary recognition of a dynamic system

therefore in order to Perception

how would it work more efficiently yes

and could differentiate the signal

here you need to use this signal

right before some kind of trouble arises yes let's say

you need to be able to highlight

at the level of previous signs

means the system that characterizes

that trouble is possible but it has not yet happened yes

there is no information about her

it is somehow possible

but why fix it once again

and let's assume how to designate it ourselves

simply some negative action

practically remove from the management level in advance

before this negative action took place

so here is a very important factor

is the presence of exactly that

that we can static area

highlight

in any dynamic area

within any dynamic region

and thus separate

negative event from positive

i.e. any seemingly negative area

it can be like a system

well, some screens of plates in the information

where the static of a negative event is manifested

and then it turns out

what we create with dynamics

it is the area of control of this system

because if you look at the information

what is the most stable form

let's say yes to management

and a platform for positive action
it's always dynamic dynamic function

because it is a dynamic function
may change
can change properties, etc.
This means that this is the most stable type of management.
there the control platform is the most stable

and although it may not look like it
how is there some platform there yes or even geometric
she may look
as a system of constant correlating actions
for example on static systems

and at the same time we see
that in order to cure for example often
even very complex diseases
let's assume there is stage four cancer
or some degree, let 's say, fourth degree of AIDS

it turns out that we get
as if in this control system
such a level
when we, due to the dynamic system
we are simply ahead of the development of the disease
in a person

and we compensate then well, that is, we give treatment to those
that we have a static system, yes , a static system
well, which can be called a "human disease"
we output beyond the access level
to the person himself due to that
that human information becomes dynamic

i.e. we create functions of a dynamic nature
as if for external information of a person

and it turns out that then we are quite
as if we define the factor of as if development yes
is that the control factor in this way?
what we are actually creating
control system independently
at any level
as dynamic
and in fact there is static
only by concentrating on the management goal

i.e. the purpose of management
it's at the same time
and it's like dynamics and statics at the same time

and based on this we can clearly see
that since it is a simultaneous control system
then in principle if we consider
as a structure of the past and man as a static system
and the future as a dynamic system
and the current one too as a dynamic system

it turns out that we can see
integrated manifestation of the image
from the point of view of future processes
and from the point of view of for example there are past processes

i.e. in the information system
you can choose the resulting objects
which are a manifestation of simultaneity
past and future

because for God as such the concept
"past" "future" does not exist
He still sees everything at once.

and His Perception is dynamics
and the object itself is like a united object yes let's say so
this is external Reality

i.e. God has a division into past and future
occurs at the moment of Perception
He controls his impulse of Perception
and He takes and there in the information, for example, some events
He takes them and starts distributing them.
it will be the past
this will be the future

and therefore in principle
why are future events often constructed
on some past or similar yes

because in principle, let's say, in the distribution system
there are certain dynamic laws
which are in effect for some time
and therefore future events

they are basically the same as the previous ones
at least by structure

and based on this it is clear
why is the material world there structured in the same way
there are roads where cars drive all the time
i.e. past events are equal to the future , etc.

and when we want to understand
where from the point of view of well as if there is an absolute dynamics of
development yes
where are absolutely dynamic systems
most manifested

Well then it's clear that in the physical body of a person
where dynamics are given in all manifestations
there is Thinking yes
Free Thinking
action
internal structure
where there is blood movement for example yes, heart rhythm, etc.

and although we are considering
system well as if in a complex
not only there in relation to a person
here we see that he is truly a man
able to influence
on the structure of external Reality
due to the simply fundamental conditions of management
fundamental Laws of the World there

when external control system
is transformed
due to the mental level there simply
due to the level of human Thinking

due to the fact that a person
can be very fast on information
approach any factor
overtake and do differentiated control
i.e. remove some element from control
move away

and it turns out that the person is in complete control of the situation in
essence
he just can do it
or for example notice yes i.e. do it quickly
either not to notice or somehow not to pay attention

but in essence, by and large
where all things are united
there ~~or~~ there at least separate objects
into one structure

i.e. how to recognize what we are dealing with
for example with a thing that is at the same time
and both past and future and process

i.e. it is a reflection
and the past and the future
what does such a structure look like

Means Well, first of all it's clear
that since a person works on these systems
and perceives them
then first of all it is the person himself, ^{yes}
but besides man
how to highlight in the information structure
integrated things

because by and large
any thing always exists
there in the past
and ^{as if} it touches the future at the moment of development ^{yes}

and it turns out that it is the simplest option
in this case, in this particular management
any static thing
to give precisely a dynamic function
i.e. to recognize where the dynamics channel is
and leading inside ^{as if} things

where there is division within the thing itself
on past and future systems
the whole world, by the way

as soon as you find such a point
within any environment
any object of information
this object becomes manageable

because then he gets there
into direct Perception of God

and from the point of view of your management
synchronization in progress
your action
and the Actions of God

This is where I end today's seminar.

Thank you very much for your attention
