

GRIGORY GRABOVOY
The Teaching about God
Eternal and current in Eternal development
23.06.2005

The topic of my seminar today
this is my Teaching about God
Eternal and current in Eternal development

in this topic i show
how to highlight information
Eternity
and the current time
because it is in the information of Eternal development
there is a concept of "section"
between these informational constants
actually manifested truth in the dynamic level of control

because when we deal
with information of Eternity
then the selection of the current time
this is generally a special task

that's why when we, for example, set a management task
as a task of implementing control systems
then we should see clearly
that the impulse comes from , for example , the current time
from the moment when the decision is made
and it spreads further
on the entire Eternal component of precisely the Eternal development

for example , when God makes the management of Eternity
that's for Him
what is private
what is Eternal Management
it's the same thing

so the task here is to be able to
private impulse to do so
so that it has the characteristics of universality

and generally speaking when in Macromanagement
I set a task
namely to create universal control through Macrosalvation
then this is exactly the problem that is being solved there

via Macro Access
the problem of private management is being solved

but this technology is precisely what is emphasized
that this is a system-wide level

and here according to today's methodology
highlighting the current time
and the allocation of the Eternal as a component of even the processes
here we need a detailed description of the connections
between the current and the Eternal, in general, even time, so to speak

i.e. it is possible to single out the time constant of the action
I say "constant"
in fact, this is an area of some information

and you can see
what if we consider for example
for example the current time as information simply
it looks like some kind of superstructure information
over a kind of common control plane

if we have a control plane
simply as a management task
then you can see how from this problem
grows
Eternity management level

i.e. in fact, the management task itself grows
object of control by itself

here is an important characteristic of management
what can we see
as if a problem or some information
grows its management level

and therefore see
if such a discrete transition were made
can you tell me how the current time works
and Eternal Time
in the structure of Eternal development

can be seen
what is the current time platform
connected
with the time of Eternity as a kind of core system

i.e. there you can see things that look like threads
connections
even close to the structure of muscle fiber
here's an analogy if we even consider it

and it turns out that if we want
structure for example well, exactly the muscle fiber itself
consider as a framework for neutral analysis

i.e. we have a muscle
and we want to consider the system of its movement yes For example
then there is external control of this muscle
in the human body
and many other systems are arranged in the same way

what we are practically starting to see here
what is external control
this is the connection of this local system
with some kind of Macro level, for example

and this connection for example
well, if some disease is being treated
you can see it very clearly here
that the wider you cover, generally speaking, the connection management
the faster you can heal
someone there from illness
by identifying its local position in the information system

and here is the revelation of the situation
and fixation at the Norm level
at least there is a millisecond
often allows for healing
especially effective in that case
if you see that the structure of healing
here is the information about the cure
is transferred to the structure of Eternity

i.e. healing occurs at some intermediate level
between local current action
and the structure of Eternity

and this is the intermediate action
it itself possesses the Eternal state
after all, a person possesses
at a certain level, a state that is as if normal for him

that Eternity is his usual state

so when we look at
exactly, well, some kind of ordinariness , yes let's say
in the depths of the soul
human condition
it turns out that we perceive it to a greater extent
The eternal state of another person

Here's how God implements, for example
let's say information system yes
in relation to man and Eternal development

God perceives man as Eternal
and this Perception forms the path for a person
in Eternal development

therefore the division of the current time
it's more information
which goes to God from man

and it turns out that then it is clear
how information moves
there is a question to God in the current time
a person highlights that this is the current time, for example

and God, perceiving , well , let 's say, the conversion of a person
Being the Infinite level itself
at the same time immediately receives a local level
well, some kind of request or some kind of action
as Eternal level

i.e. an appeal to God
or Perception of God in Integrity
i.e. it means simply Perception as such even
creates local, for example, human action systems
in the structure of Eternity

i.e. it means correct Perception
Well, let's say Macro quantities
but in essence in a deep aspect
this is still the fundamental Action of God
for training a person specifically

we see here
that's when we move on to the structure
as if of eternal action

the word itself is important here
i.e. "eternal action" i.e. "coming from Eternity"
but it can be localized

although there is another meaning of this word
right where we are
this fragment is "izvech" or "izvlech" ^{yes}
"from" "from somewhere"
so we don't have to finish
but we have the beginning of the word

we can obtain the structure of the universality of action

i.e. it turns out that we have a structure
obtained from the structure of Eternity
but this structure can still be local
even just the word itself

and it turns out that we can see
that besides some core systems
which develop if we look
local structures
and ^{for example} there is the Infinite, i.e. Eternity

then if we turn the system upside down
just mechanically, ^{as it were}
then from the structure of Eternity development goes further

i.e. not back to the local system
and vice versa local system
it ^{seems} to approach the structure of Eternity
and development goes into some next system

so we can determine it turns out
that the Law of Creation of Matter is in fact

i.e. how matter is created
if we perceive
some specific level in the creation of matter

and here it turns out that we can quite well consider
this level
as a system ^{well as if} the most favorable actions
for personality
and actually see
that the creation of the substance itself in this system

This is work that is practically necessary , then
how does the system mean your actions

i.e. this is the job you need yes
to create a substance or some matter
and the work that determines
the structure of the Eternal there of Infinite development

i.e. this is precisely the selection
of his own impulse in management
the ability to understand what exactly you need this management system
this is just a certain part of the work
where do you actually find
a certain place of its action

and it turns out that it is just like God does in management
He does
and universal governance
and private
and controls processes that are often very unique

i.e. He controls sometimes from a human point of view
those processes that well as if they could touch him yes
or touch upon in Macromanagement
but at the same time it is obviously clear
that God still has a favorable development

for He is God
there it still creates a favorable level for itself
further development or current yes

and it turns out by analogy with that
as God does
a person has this level of further development
very clearly linked to the current time

i.e. for God there are no problems
He knows the structure of future development.
and for example, so that a person knows
he needs it as if Well, maybe rise above the level of events
and look from above
precise action structure

and the exact action is divided
on a multi-variant, as if predictive, even path
not just multi-variant
and the forecast may even say so

what besides absolute forecast systems
which are not so significant in the management system

an absolute forecast can often concern
there for several years many years
and not change at the same time

and it doesn't happen that often to a person
absolute forecast system
what does he know
there are some tactical strategic systems of the future
absolutely clearly ^{yes}

or he knows it clearly
or he periodically sees something in his dreams

and it turns out that to a greater extent
the control space is multivariant
i.e. absolute forecast
this is what in a collective sense
suits most people
or almost all of them or the main structure
for ^{example}, the Macro-creative function of future events

and considering that ^{well} here to a greater extent
It depends on your personal mood ^{yes}
states or desires

and if the level is already creative
then in the future it will hold up

therefore Macro forecasts are of absolute nature
they are usually confirmed quite simply

but it is precisely the ability to vary ^{yes}
other information
all the time it comes down to the structure of the collective will

this is how it actually happens
^{well}, the formation of future processes, ^{perhaps}
from the point of view of current time

there is nothing unusual even in the control system
you just need to take it into account
to what extent is the collective will manifested?

in management

i.e. how much well let's say your action
combines
the condition of precisely universal equal development

and that's when you start this condition or something
or some kind of systematicity
to a greater extent one can say this way
namely, universal equal development
bring this system to a level of development
or potentiality in the development of action

then it is clear that this is exactly where it is
distribution of current time
and time, for example, universal
or is there a local plan or something
and the general plan
where is this so-called "local" level
there is a dynamic level, the current time level

visible quite clearly
here it is all shown like this
what is the current component
actually part of the human structure
i.e. already in well how exactly is it designed ?
in a finished form, so to speak, yes
man is already created

i.e. the person already exists
and at the information level
and at the level of its own creation

i.e. for the first time here information about this appears
what is a man

the thing is that the information is about a person
she is of a completely different type and nature
at the level of Infinite Perception
she is no different from a human
because man is an infinite quantity

and it turns out that there is something to say
what is this information
or the person himself
it is often necessary to clarify the situation further

and it turns out that when we start to see here
what is the information here exactly
enters into a single person as if inside yes
and it is man who is a system of interconnections
current, i.e., as if private, such a local
well often this is how it looks
dynamic control system

and the general level of management

and here it turns out
what is the general and the particular level
it is actually realized in the person himself
where is the local level
well, the physical body of a person for example Yes
it's like actually private local level
from the point of view of the whole world

but the whole outside world
precisely through a person
related to the current time

i.e. to determine logically
current time boundary
you just need to perceive the person as a whole
which is always in the current time here
from the point of view of Macro-connections

example, if we want to consider
Well, from the point of view of practice, I guess
development of clairvoyance, so to speak, of the manager
Spiritual vision
structure of the past

and look into the past
how a person, for example, carries out his actions

then it turns out that there is a narrowing here
of this Macro-quantity of Infinite magnitude
into the structure of the past

i.e. there is simply a narrowing in the past
the further into the past
the more the quantity of the substance, as it were, is narrowed
this Infinite

although for the Infinite substance
here define the concept of "narrowing"
this is only conditionally possible

but nevertheless it is visible on optics
precisely as a narrowing, like a kind of cone

and there is not a final boundary there, but rather a truncated cone

and in Infinity this is the development of matter
and if at the initial level it is more dense
in the past
in the Infinite it is a more sparse system

then in the current time it is a system that has
variable density on optics

i.e. the density here practically changes
at the level of so to speak action

the action took place
and the magnitude of the light changed

i.e. in the current time it is always possible to calculate
in fact, you can even see it that way

the amount of light changed or something
well, the number of some glare there light levels
and understand very precisely what is happening here

and therefore in the current time yes
a person can easily see there with his eyes
i.e. where did the organs of vision come from?
related to the current time

because here it is
it's exactly this kind of dynamic environment
which varies very clearly
depending on the state and the person's actions

and by the way, that's where the treatment is, for example
or there is the creation of good events
in a person

often revealed by the fact that we
at very high speed

we evaluate as if we find in the information
coordinate
which in the current time corresponds to a person
and everything will stabilize for him

that's ^{how} we just record it often for him
coordinate of the current time
so that he would perceive his position ^{as correct} or something
from a distant point of view
its strategic development position

i.e. on the one hand we take
some Infinite quantity often eventful
what does he want to have in the future, generally speaking

and often his desire for a person
^{Well} sometimes a simple desire is enough
this is an infinite quantity

because for the Soul of man
there can't be something simple or something complex there
if the Soul of a person needs it
then this is a Macro concept

and here we move to the personal level
formation of Infinite systems

i.e. a simple quantity in desire ^{or something}
a simple human desire

for him it is Infinity in the future

and the transition from here
into the structure of current time
it turns out to be quite simple

i.e. ^{for example, by the way, during treatment}
^{Well,} various kinds of complex diseases in people
^{Well} so let's say those whom you treat
those. other people ^{have yes}
not the person who treats himself

because who treats himself
he must be in the Health Norm phase
and treatment if he needs recovery there
to this person
he must conduct

from the point of view of Infinite systems there
who go to him as if

means to see the Norma signal
because there are many control systems like that
that they may even be complex
but the manager himself may simply be healthy

and this is precisely the health system
maybe he doesn't need it as such in action
self healing

but nevertheless it works at the system level
but it must receive a comparable signal
i.e. if he heals someone
so he should be healthier yes
reverse action

and if he is healthy
then how should he distribute this signal?

i.e. transition of the same type of level
into the system of precisely the prolongation of action
for the common good

i.e. it turns out to be some kind of delta
the concept of "universal health"
i.e. everyone is healthy

why do i say it is necessary
namely general health
universal there Eternal life

and this is where the overall health component comes in
because this signal is reflected
the more a person treats
the more health feedback impulses he receives
that means it must lead somewhere

he has his own status, that 's enough for him
but the way out is this control
that there appears to be a wave coming from a person
which means the spectrum of health for example Yes

and health is well, the norm of development
also an element of Eternal development

and when treating another person there
you are passing a structure that is actually well let's say so
Well, if another person accepts it
your treatment your management
it turns out that he is collecting information
but at the same time, here is the transfer of this information
it is already being carried out in a different way yes

i.e. he acts on the one hand
as a level
which can accept an infinite amount of information
because he can take as much as he wants
at the level in principle the action as an Infinite quantity

in this case he gets the effect
and action occurs
where your or his personal experience is already
goes into the accumulation system
there is experience in the collective Consciousness

Well, that is, in any case, it is beneficial for everyone

and when you start to see
that you are transmitting information in the Infinite plane
and he comes well as if a local segment of information
but it is even more capacious

then you can see it here
that as soon as you provide assistance to another
you organize it there
you help organize events there
in health improvement for example

then here is the local finite value
contains more control information as it were

there is information about favorable development
due to the experience gained

and it turns out that here is the transformation
like God does
He gives to a person
An infinite amount of information at once
i.e. although well, it seems like these are some kind of local information systems

but God Himself is Infinite
It can only give Infinite quantities.

and now a person can perceive them
or as an Infinite quantity
then he immediately considers God more yes
how does it work
or it can consider a finite larger value

i.e. he looks into the essence
some system some event
Human
and produces for himself
what is more desirable to him or how can he do it at all
from the point of view of education there development technologies

and it turns out that we have here
very big, well , even complex
large size relationship
in optical, as it were, geometric dimensions
the following sense and content there

that a person actually
well, which transmits the system of knowledge
in large quantities there let's say
himself tuned to Infinite development
he is in a harmonious phase

because then it initially forms
Infinity Impulse
and it works the same way
as in the action in Macrodevelopment means
that it forms the Macrospace there

When God acts
He can act and he does act.
both in general and in particular
He gives everyone private systems

and so a person needs to match that
as God does
he must consider in the Macrosystem
at least some special cases

and here is the interaction
God and man
often do not differ in private systems

i.e. God perceives His actions in exactly the same way
how does a person perceive such a unique case mean

and it turns out that in this case, by the way
very effectively heals
there is the person himself and around that level
where he implements the action
favorable systems emerge
even in remote control

i.e. there is a region or some locality there
carry out management at this level
the environmental situation there will improve
for example, there will be no accident there, etc.

i.e. physical space begins to react
for your tasks
to your presence
at your control

and it turns out that the next element
your favorable management has come to pass yes
in the control space
even if it is in the future space
influences the Macrosystem as if in a Macro-favorable way

because you just have to get it
one element of favorable development
how the reaction of the Macrosystem begins instantly

so in this kind of investigative system of action
one Macrosystem there is some kind of distant
can be organized by impulse alone
intermediate
between events
and simply external physical space

we are now coming to the point
where is the physical space

begins to form an information system
those. informative space

and here we already see
as the physical body of a person

forms information around itself

then you can enter the body structure
look well as if without even touching the body itself
see what's going on
based only on external information
because we know these connections

by analogy with how one impulse
creates a favorable system

in the physical space itself
and as a result organizes the information field

logically it is clear
due to the structure of Eternity it goes
as if an exit to information
additional mass of the event

and therefore it turns out that we influence information
just adding information there
simply by some mechanical means
due to the action and the fact that the action exists

i.e. here you can see that in the current time
some action is always taking place
this means that this action always has an effect
on the structure of Eternal development

i.e. it is like this system is the root system
for the structure of Eternal development

because the initial level is always in the current time
and all Eternal development
this is already a cone that we
they took it and lifted it up and laid it down as a base
with a sharp base yes
well, let's say the top of an inverted cone

it means where the base is higher
and the top is on the current time platform

so we took it and lifted it up
the structure of Eternal development

i.e. made some kind of movement

and then we can do this cone
take and transfer it into the future
into some element

and here it is immediately visible
that since the future is multivariant
the cone begins to diverge and increase in size
i.e. the number of images becomes Infinite

and then it turns out that the same thing is by analogy
man was created
i.e. it was not created just there in the singular
just similar yes or just similarity for example
and that's all

and since it is created from the point of view of future time
then it has precisely the structure of Infinite development
simply because the space is arranged this way

when, for example, a person begins to see
structure of space
from the point of view of future development
he can clearly see his place there in the future
or change it whenever he wants, in general

but at least he can
navigate through information
exactly or as precisely as possible yes
he can make those decisions
which are more manageable
from the point of view of interaction with the Macrosystem

i.e. well, "manageable" means
that he does not lose control over them

and so it turns out that from the point of view
and already integration of connections or something
Eternal system
and local
here we see that we are already solving a different problem

i.e. if at first the task was to differentiate
i.e. consider
where is the current
where is the Eternal
then as soon as we begin to recognize something
this system

there we make some first movements
on the analytics of this system
then we immediately see
that the task of considering immediately arises
and where does the docking actually take place?
local and Eternal system
well, like some kind of docking module, big or something

there Eternity is a big thing
here it is approaching the current time
which is still well in general, even the management changes

and we need to connect it like this
so that there would be a continuous past there
continuous future favorable yes

and here the first element appears
what in the first option
well, this cone-shaped mass
where the constriction is in the past tense
Well, we looked at the model more.
past yes
current
An infinite multi-variant future

then here is a transition as if into the superstructure of the past, let's say yes
at high speed
where there is the initial Action of God

He shows it too
the structure of the future of some fixed
because God originally created the World
He still knew the whole future and knows

that means somewhere at high speed
here at high densities
we can look at the structure of the future
but only here there is such a favorable value
the future here is not formed, i.e. it is not defined

here i found the first element where the future is not defined
for example, in local systems
where there is no absolute forecast

where the absolute forecast is always determined
what is meant is

how to create the matter of the future in a neutral form
and make, for example, what you want , yes

i.e. we must then do some
Well, in quotes there is "plasticine" or something like that
by the way it looks like a mass at first more similar
by the mass of plasticine then

and then we must from this level
get
well, to create some kind of image, yes
the figure of Eternal Development for example

i.e. if you work with images
you can take and set a task
let there be a human figure there
it characterizes the Eternal development

i.e. we move on to images
immediately with this task

so it turns out that the construction
Well, I mean, it wasn't by chance that I said human figures.
construction in a multi-variant future
fixed level of development
for God
means it leads to that
that He must create man precisely

and this is precisely the non-randomness
what a person stabilizes
with complete freedom of action
stabilizes a specific development option
which was originally determined by God
and the person tries to fulfill it

but is it clear from a logical analogy?
God having the same Body
it works the same way
then it is clear that a person should act in the same way

because information is in space time
and in general just in space
has a level of some path of analogy

here is the information of the physical body

has ^{well} like the shape of a car
if a person is driving a car
in the relationship it is meant
the shape of a machine and the shape of a man

if the car is very large

it's not comfortable to drive, ^{yes}
and it may not match

this is exactly the interaction
current and eternal magnitude
translate, ^{for example}, into such a management structure

here is a car as a local quantity
and there is an element of Eternity
Human
Infinite level of control
how to make the element local "car"
was also Eternal ^{yes}
i.e. ^{well}, she didn't get into an accident there, etc.

then you can act in the same way
i.e. to be able to translate
the structure of the current time
into a structure where there is, ^{as it were}, a certain capture of the past
so that there would ^{be} information ^{about} the structure

and translate at the same time
through the normalized past
^{Well}, there is a car being produced on some kind of conveyor belt.
^{means} to translate into the structure of a stable future

where the future is uncertain
but you can build a structure ^{like} a machine
from the image of the machine
but at the same time at a controlled level and level of control
there will be an image of a person

so if we consider
the beginning of today's lecture
then control over the system has the image of a person

the current time system begins to grow
and ^{for example} Infinite quantity
but the control over the system is a person

this means any system is in development
as if turning into a person in information

and that's when we have this element of transformation
we begin to differentiate
then you can see
that any disease is possible if a person has one
and if well there somehow exactly needs to be cleaned
you can literally see the stripes there

where are these information twists located
how can i withdraw

Those who have time can just sit carefully
and slowly release
all these are like layers of control

for those who are healthy
You can build a sustainable future on just about anything
developments specifically

when there is a large number of cases
often this is a convenient angle for that
to react quickly to the situation
make management
and move on to the structure of the future
based on a clearly defined management position

this is where it's important to see
that the future is often very clearly defined
for any person

and it is absolutely clearly defined that
what is the Infinite Future
can be implemented for any person
a person only has to want it

this is precisely the possibility of realizing Infinite development
for any person it is like a law of development
in general, civilizations of material society, even etc.

and now moving on to this one
well, social, physical, so to speak, management status
can be seen
that in the structure of the Thinking of any person
here lies this translation structure
this neutral substance of the future yes let's say

into the structure of the image

what is thought in this understanding
a person just takes this platform
some kind of plasticine, *yes*, conditionally
or a mass similar to plasticine
and due to the millstones of thought, *so to speak*
takes and grinds into the structure of events

this means the mechanism of Thinking is unified
well, like some kind of factory *or* mill
which constantly grinds the same mass

but produces different systems

if you compare it with a mill
then first it produces flour , *for example yes*, something homogeneous
and then with my own intellectual contribution
a person forms some pies, cakes, etc. *there, yes*
bread *for example*

it turns out that intellectual action
this is the next action
and it is not the thought that is primary in this case
initially some initial original human action
here's an analogy with how bread is baked there
i.e. different products from the same flour

form of thought i.e. a kind of millstone
and already an investigative product
it's still flour *for example Yes*

Well, I'm not drawing a direct analogy there, of course.

but if you follow this logic
then it turns out *like this there* is treatment for the disease
especially if the person has tumor diseases

then it turns out that it is possible to do only just
at the level of *actually* forms of thought
where it's *being* ground up
this outgoing neutral mass *means*

and at the same time the Action of God is visible
in the structure of the organization of this mass
periodically a person can see
or see always if you want

but the task is to learn, he must see
and always and at the same time be able to do it yourself

i.e. a combination of two actions and an Infinite level
"always see"
and the "learn it yourself" level

then here the important element is
that the form remains unchanged
therefore the human body in the presence of Thinking
may remain unchanged

and Thinking is always there
i.e., for example, a person perceives

this is already the structure of Thinking

i.e. the person is well let's say in a state of action
or simply
his body perceives Reality in some way
this is already an element that is correlated
with the system of Thinking

and it turns out that something like, well, like Thinking
i.e. there are some actions of information
which correspond
principles of translation of structure
some form
into action the intellectual action of man

it turns out that a person puts in front of himself
well, in fact, the system of the next action at the level
as Thinking
and some completely different level of interaction
where does Macroreality exist at all?
where is the man himself

but which is at the same time
and a human being means Well, actually speaking
which we are accustomed to perceive
as a person who, for example, can have it there
some local development systems

but there is a very clear Action of God here
at the level of that
that God gives Eternity to this particular person

i.e. how does He give Eternity at all?
how does he ^{mean} this puts it ^{yes} God

here you can recognize this Action
^{well,} like some kind of channel even
in geometry where it passes there above the person
you can clearly see a shining silver channel of light, ^{so to speak}
light

and microparticles of light begin
to spread wider and further
the further from the pole the greater their speed ^{yes}

and this is the essence of the Eternal Man

so it turns out that we can divide it
current and Eternal in the light level
this is the light that works

light that brings specific events
the light that organizes turns out
and the human body
and his Thinking there
i.e. the whole Reality of man ^{yes}
and at the same time the events themselves

so here is the control action
at the information level ^{or something let's say so yes} volume of information
consists of
that a person always essentially controls events

here is an important value in this management
he is like an Infinite level of Perception
naturally knows what is ahead at a certain level

and therefore any event is in the control phase
here's who recognizes it ^{yes}
he becomes a manager who sees all the time
there are prognostic systems
and tries to implement them there for any needs ^{yes}
there including healing needs
there are some management issues there
control of any system of matter

and if a person doesn't pay attention to it
then it means that something is happening to him
naturally some kind of related development

here is the selection of the value
as if the final one in control
that's exactly it
already formed local human action
some result obtained

and therefore the interaction of this result
with the structure of Divine development there

i.e. what is the element of limb in general
for God
for God in order to perceive the final magnitude
had to somehow create for myself

that's how it turns out
that a value is needed to transmit information
which has well as if a finished form yes
some localized system

there a person perceives a person

and he can pass the information on to another person
and God must perceive at the Infinite level
this element or this phenomenon so to speak

and it turns out that God perceives man as Infinite
because He Himself is the Infinite God
that is why He perceives His own form
as an Infinite System

i.e. He laid it in Perception
in fact the status of the Eternity of man
because there is such a system
so she is the Eternal

i.e. He laid it down simply logically

means at the basis of human thinking
this is some kind of millstone as I said yes
some kind of internal structure of the mill
there is precisely such a process

that a person perceives something that is happening there
if he wants to look at his thought
as a localized system

and God perceived precisely perceives it
as a system of Eternal development
and that means a signal, so to speak, that comes from a person
he is the Eternal signal for God

and if a person begins to recognize another
what is this well like, there is management, yes
this phenomenon is such that you just have to see it
as a person in general Eternal signal as if Well, it will be implemented

because that's how God perceives it
and for God what is Perception for example
what do we say element well so any other action
it's all the same thing

i.e. physical Reality
Thinking
Perception
with God it's all the same place
For Him it makes no difference at all

and that's why it turns out
what we see in this way
Let's not just say what we observed

here is the impulse of God's Perception
and what we see is the manifestation of the Will of God

i.e. very convenient control
what do we need to see the Will of God
we don't need to look for any impulses
there proceeding from Him

and there is no need to ask the question yet
where is this Will located yes
how to calculate it at all
this amount of information

but it's enough to just see
this is the element of Perception
understand that the Will is there
in the Eternal Impulse of Man

this is what comes from a person Eternal
that is the Will of God directed towards Eternity yes

i.e. initially he is Eternal

and it takes another localized impulse
directs somewhere into Eternal development

so it turns out that here as soon as this
Well, that's how she is anyway
Well, in control it looks from many angles

but quite harmonious
or even so to say, such a harmonic phase of control
what is the Eternal status of man
i.e. the Eternal is actually a man
forming some initial level in myself there
which he, for example, calls his Thinking
or by your own desire
some primary or subsequent
well, some action that is autonomous, yes

creates an Eternal Wave of Development

i.e. it turns out if you look there
from the point of view of information simply as such
people shine from themselves with Eternal light all the time somewhere

and either they can shine in one direction
creating a platform for this light yes
there are a lot of lanterns and candles there
but they are, for example, in Infinite Development

At this political level one can say

and let's suppose we consider the process like this
that we see the structure of development in that
how it is formed in the current time
this is this united and private impulse

i.e. a person produces division within himself
private and Infinite

and that means precisely division
that which exists in the universal Reality
it is first of all an act of absolute human will
i.e. precisely his complete free will

so we came to this
what is in the Eternal and means in the current time
we have a manifestation of the will of man

well, so that it would not be said in a bookish way
then it turns out to be something like this
as if a formalized system of representation
in this case material

you need to see what's going on
specific work in management now

i.e. to do specific management but according to your tasks
and the tasks are to find those that exist
in logic it's stable as if Yes

then it will be clear that this is not formal
Here I have just a presentation
it even looks like a book text

as soon as we start talking about Eternal Systems
then text systems arise literally there
in the presentation

but oral speech , for example, yes
she is still different
the level of action at this moment is additional

well, by some other action
there by the action of Eternity
connected in the current time with a person

but here is the current word
means localization

man as a level that pronounces the word
and a word that has infinite development
The Endless Trail

i.e. in the structure of mental relations
it turns out that we have in the word
the same Law of development of the local system
where the spoken word is already Infinity

i.e. he is a human being
pronounces the Infinite value almost immediately
simply even by the logical factor

the word can be used
in an infinite number of options

there are just some letters yes
which can also be
used Infinite number of times

i.e. a person uses
in general for some local actions
for explanations of local actions
Infinite systems are actually

i.e. you can build one house there
for some specific project
but they use the same group of words
some symbols, etc.

You can build a million houses like that there, etc.

it turns out that we are talking about that
that the original action even on logic
what is used in the communication system
man originally
also an Infinite phenomenon
as a consequence of his Infinite state

if we perceive it
not just there mechanically, like that
Well, that's it and that's it
and let's explore the root of this phenomenon

it turns out that we can see
where man is connected with the word
i.e. connected to the outside world
Well as if there is some kind of umbilical cord there, let's say yes
when a child is born

and here is where this umbilical cord is
with all external Reality for example Yes

what is this external Reality for a person
and how does God look to him in this regard

i.e. if for example Well, on a biological level, yes.
there is such a physiological moment
from the point of view of the physiology of childbirth
what is the umbilical cord

then, by analogy, creation occurs
or is there a primary birth

human

how God simultaneously creates man

i.e. where the structure is overcome

Well in general, such a Divine level of Perception

from a human perspective, so to speak

and at the same time this is still the status of God in Action

those. the task is this

what is the Infinite World and we need to understand

here is the birth of one man

as a local and infinite quantity at the same time

how can it be applied or something

this is the system of analysis

so that a born person can live infinitely

i.e. in principle applied by any other person

since it already exists

and here the situation is quite simple

and often completely simple

all Perception that exists

with all the controls there etc.

i.e. with all the mass of actions yes

these are still elements

or Infinite indeed

in terms of Perception

it means that a person perceives it this way

that's what he really means

yes for him it is an Infinite system

and some local etc. actions

and this is a certain level of one specific person

but the birth of another

this is some specific value

although he is Infinite

but a person perceives it there

as a child there

some local event

birth for example

so you can see it from here

that God's participation in the creation of man

already as if in the investigative version yes
after God created the first people

this is the formation of a similar system for Him
so, well, the same as the system
how was it formed
at the primary level of even self-organization
not to mention that there are other people's lives there

and it arises
Well, it's a fairly complex mechanism in principle
but then this is sort of an intellectual background or something
there is a perspective or an intellectual action
this certain level of various connections
it is such that you see the organization of the person himself
from what are in fact local light-optical systems
but a person is always whole

i.e. any local system
in general, any object of information, so to speak
in management
in Perception
they will always organize you there
any other person
entirely

and that's when you start to see it
you see that it is exactly the current
i.e. local action of any system
creates the Eternal
because there is a man
who perceives it
and in its Perception it realizes this

and then by the way they often become very simplified
control systems well from the point of view of that
where to get well as if some kind of "energy" is such a concept
or some management resources

it's enough to just get to know it here
this structure of the World
and see that each element
can carry the structure of Eternal Life
and in the area of Perception there isn't even a section

i.e. when you are in such a harmonious management system

come in
then often all your questions become resolved
just because you this system
that's exactly how you perceive it

i.e. your point of view your position
and you have the next level of Eternal development
which also shows stably , for example
that this is a necessary attribute for your activity

and then you already begin to live harmoniously forever
i.e. to see that your life, for example, is Eternal and harmonious
and you practically get control of the supertasks

i.e. you do something
but all the time you understand that this is your super task or something
some following tasks
are always decided according to Eternal development

then the management often becomes simplified
and any local action
leads to results instantly

This is where I end today's seminar.

Thank you very much for your attention
