GRIGORY GRABOVOY
The Teaching About God
The spiritual meaning of management
18.03.2005

Hello
The topic of the seminar is my Teaching about God
The spiritual meaning of management

in this topic i show
how if we consider the control system means
consider the Spiritual aspect
and in general the semantic level of this action, so to speak Yes
from the point of view of the Spiritual aspect of being

and when we consider such a principle
as a principle of further action
where in principle if we have
level of management of this kind
what is let's say a task
and how should this problem be solved ?
here from the point of view of the Spiritual aspect
because in the Spiritual aspect
exists
many categories of problem solving

and based on this we can
Well as if having determined first of all
it is precisely the semantic aspect, as it were, the Spiritual meaning
already have, as it were, an internal solution

nevertheless of course I bring it all the time
to management practice
but when we consider the Spiritual aspect
that state of the Spirit is the state of the Spirit's action
This is the level that allows you to solve problems
as if knowing from the very beginning that this is correct

here is the Spirit, he has the property
preliminary precise knowledge
and based on this we have the opportunity
as if relying on the wave of the Spirit on the state of the Spirit
to be absolutely sure that it really is
our next action is done correctly

what if we set a task
Well for example, who needs management as such

let 's assume in terms of achieving results
or some action
Well, it 's one thing when it goes through Macrosalvation
and some special technology is needed there
and yes , it makes sense to learn this
there is a logical aspect

but if we consider this level
that in principle it makes no difference to a person
almost any aspect of Reality
except for its own state for example

and the man well for example, for external purposes
he hardly reacts at all
and he just needs to somehow intuitively
should I do my own thing?
or he just doesn't have any information, for example
that there are direct access technologies there for example Yes
management

in this case it is more natural, meaning it is based
on one's own Spiritual Perception

that's if we show here
that management has a broader scope
more or less developing Spiritual meaning
that his state of Spirit is also a controlled system

what if he leans
only on Spiritual characteristics in action
then through management they can be expanded and detailed
there you can find shades
and in the end, in principle, he gets
basically the same thing
but with more power there as if it were baggage of knowledge
in this action

then we can convince such a person to use it
that's exactly the precise control system there
the system of developmental management there

and therefore the search for precisely the semantic aspect as such
although logically it is of course clear why it is needed
as I said in this case there is

many other explanations
in principle, as if even an infinite set
You can explain that this is good, etc.

but in principle, this is exactly such a radical question

he still demands an answer
and here, in order to really
it means in control technology
so this is the knowledge that really saves
were transmitted to all people
Of course, we need to look for it in the Spiritual plane
in terms of a kind of mental action
intersected with Spiritual foundations, etc.

and it turns out that this is still a special task
again management
which is primarily aimed at
that a person solves these problems at the same time

i.e. for example when God and man
solve the problem at the same time
then a certain level arises
so such pair interaction
when a person understands

and God perceives it just like man does
this is such an action
this level of a certain, as it were, collective knowledge is obtained

if we want to understand
where does such a level develop from, for example?
as a collective Consciousness

i.e. how it is practically implemented
in action
then this is exactly the level of such a paired action
God and man

when God and man do
for example, it is not even necessarily the same action
but it is precisely spiritually that they are close to each other
it turns out that it is being organized
it is the fabric of this very layer of Consciousness
where it is expressed very clearly
this is the collective share
as if a collective vector

and when do we start
for example, make the control this way
that this is the collective vector
we translate
into the structure of practically the following knowledge

i.e. we decided to make the collective Consciousness like this

so that the collective Consciousness organizes
for example the following development status

i.e. there is a faction of Consciousness
we decided to let Consciousness work
as if by itself as an external environment
and organize a favorable management system

and that's when we see
that some element, for example, can be organized
as a development system well kind of independent yes
like how some phenomena of nature exist
well, i.e. the natural level of development

then the Spiritual aspect is already clear here
in terms of Macroknowledge means Macromanagement
where is the level that is
that man has achieved control
at least once managed correctly
and got the result as if by remote action
naturally he should pass it on then
into this sphere of social Consciousness

so that the collective level of social Consciousness
could further build a favorable society
it's like his personal duty

sometimes it's difficult sometimes it's there well it looks like this
that it takes a long time to do it there
in relation to, for example, a particular person

but overall having solved the problem
namely access to any person
here is the information of Salvation
we naturally have to cover
this Spiritual aspect is also from that side
what well how can a person not consider
The spiritual aspect in general

i.e. he doesn't have this level
then we must activate this meaning ourselves
and give him control

it turns out that the position of conviction is the position of access
as if to other people's information
which are often separated altogether
from the management task well as if by the tasks themselves

For example there is a task of resurrection
this is such a task
well, as a task for example there are macroregulations

if a person is engaged
it becomes easy for him
action
that's natural for many people
this requires a kind of primary level of Perception

and here on the Spiritual aspect
on the Spiritual proximity of management
you can make transitional bridges like this
which solve the problem quite simply
and practically without any significant
For example there are complications there yes
there is a duration of information translation

i.e. when God interacts with man
this does not mean that for example a person needs it there
or study there very intensively
to interact somehow in a short time
or that God has to slow down there
speed of data transfer

in fact it is a single Spiritual action
i.e. God is the Creator of everything
and a person interacts on a Spiritual level
almost the same as man to man
in essence, this is precisely the Infinite Development

why do I often add this phrase
precisely "in essence, Infinite development"
because in the Infinite level
all actions have approximately the same status

there at this level this position is in action
it is practically quite clearly visible
from this very point of view
such a vector of Infinite development

when we talk about that now
how then to another person
to pass on means from a person
here it's even easier even with super speed there Yes
God
from the point of view of the level of His management
and the person who perceives
some part of God's Action

so that a person can fully perceive
Action of God
he needs to tune in a special way yes

However, this process is quite simple
and it is almost constant
between God and man

and when I say the word "practically"
then this means that there is no gap at all
just a man
either perceives this aspect or does not perceive it
doesn't want to or, for example , he's busy with other things

and when if we compare here with that
what the other person is conveying
Well there for example the same knowledge yes
to the same person or people to each other
it turns out that we are working
generally speaking in a very simple environment
in this regard, in the Spiritual regard

the speed of information is practically the same
People do
transmission and processing
and at the system level from God
it's generally the same
precisely on the distant Infinite development

and there is nothing new here
there is a direct control system here
and the transmission of even visual systems

Well for example, if you ask the question
why do people have the same shape
from God's point of view here

why is this problem solved
because it's the same shape
This is an instant transmission
the same information

and the form itself contains information
elementary a person contains even at the cellular level
information
here is its optical glow contains
all he has is yes

here is the transfer from one form to another
this is a direct transmission

i.e. when people come into contact they exchange
naturally with a different type of information yes
at the physical level
when they communicate on the physical plane

and so that such systems as Internet technologies
let's assume some kind of correspondence technologies
writing systems texts
transmitted accurate information
Means Well as if human actions
then it turns out that they must be projected
from the shape of a human

and every element of text there or there Internet systems
should contain practically information
about the human body
about the shape of the human body

and when we start to solve this problem
then that's exactly when the Spiritual meaning of management
and it also comes down to this
that a person begins to understand the Spiritual structure
as if external elements of Reality

and it turns out that understanding this structure
allows him to bypass a number of events

well, quite favorable or radically favorable
so that he is in any activity
there in any aspect of Perception
sees exactly such a harmonious status
revealed
at the level of comparison with the human body
with what it carries
this is precisely the structure of the Eternal World of the Universe

here's if you look at it in time
it turns out that the human body
this is actually a very long time, yes
concentrated
from the point of view of the Infinite level
initial level of Consciousness

this is clearly visible in this thread
what is on the Spiritual level
the human body carries
all concentration
the original status of the creation of matter even
the Universe in general

if we want to see
how the world was created originally
i.e. first the body of the One God was created
and the World was created around

then it turns out that when God means He recreated Himself
It turns out that he should have
as if to move the external matter aside , yes
Push
to create a physical body

and it turns out that the substance that was revealed is like this
well, let's say pure reason, or something like that, a formula
this is this action
where there is a transition to the material level
this is what is in the Soul of every person
because this action is initially united

because that's how it works
that this is the point of God's creation, so to speak
this is the level which is generally for understanding Perception
accessible to every person

i.e. naturally a person can count

that since God created Reality
This means that He was created from the beginning
somewhere in some area of da Reality

but when we get to that
that He created Reality itself
here we get back to our cellular level

and here is how the Spiritual
it is the aspect that means in the management of the semantic
here it comes down to what we have
as a precisely meaningful action
all the same

here is the one who thinks about the meaning of life
or here is the contemplation of meaning
this is his own action
For example , he doesn't need anything else there, as it were Yes

then such a person is in principle
in the same system of Perception
for further prolongation of events
He seems to carry himself in the light of events.

if you look from the outside
each person somehow well Means
Well as he would conclude in light of all the events

so here is the one who doesn't think
he also carries himself but
basically in the same direction
but at the same time he uses it simply
only some specific ones
well, maybe sometimes the same ones next to each other
management techniques

i.e. it turns out that the only difference is that
that the manager just has
which deals with Eternal Development technologies
more techniques

and that means
or there are enough of them there
in order to do it there
in any case there is Macrosalvation

and here it turns out

that because people are not different
then this is precisely the Spiritual meaning
the meaning of , so to speak, internal contemplation
it is precisely in the fact that people could
well, in comparison, for example , with that
that people are all equal
but their actions are such
what they mean practically means due to actions
can do well For example there are different tasks there

then here it turns out
what exactly is the Spiritual meaning of management
is simply a technological solution
the same tasks
so that they are simply solved more effectively

and that's why here is the Spiritual aspect
passes
precisely in the technological parameter
which is quite common
for the logical phase of the phase of Consciousness

i.e. a person should be more professional , for example
there in the control system
and based on this

then it makes sense to do this
from the point of view of the Spiritual aspect

but of course there is also a state of the Soul
i.e. where is the Spiritual aspect
as the action of the Soul
this is an expressed property of the Soul
prolonged to the present and Infinite time
Well as if without a past tense

it is very important to see such a very clear aspect here
this is exactly the level of action
what's in this action
aspect of the present time and the future
this is separate information
and the past doesn't seem to exist
in terms of information

because we all know that at the present time
how can we there what happened there a second ago

say that we have access yes on a physical level

it is considered that time has passed
and we don't have access to the past

so it turns out that in logic there is such a position
it has some, even absolute characteristics
for those who don't know that such access is possible

it turns out that based on this
this is this phase of separation
means of the past
for example , in the area of some information
and the current future
to another area of information

this is basically a concentrated action
all events around a person

i.e. a person gets into the structure
when all the actions
if in a different coordinate system, yes
enter
all the actions around him are very clearly shown
in dynamics

and is it really so?
if a person is taken out of the system of events
then it turns out that they are practically projected onto it

all events that exist
there in the future past tense
and due to this
a person begins to control events
i.e. God controls all events
because He is, as it were, outside the event phase

and that's when we start to bring it out
Well, let 's say ourselves yes to the event control structure
outside of these concepts of time
there is "current" "past"
then this absolute state of some kind arises
which is there, well, in some technologies
as a special state of Consciousness

but the manager he cannot and should not be there
there in some special states

it should work at the normal level according to my Teaching
in the logical phase of control

then he gets a special state task
translates as
into a small logical microphase of control
i.e. well, short quick control
it is precisely the microscopic system of so to speak action
from the point of view of the global level of information

and this system
I call her there very small for example Yes
microscopic

i.e. in vision in Perception you need to do
increase information
i.e. to increase the concentration of Perception
to examine the object
well, like some kind of optical lens

the only difference is that
that the object is inside the lens

and that's when you start
increase the system of perception
and examine the object inside

then this is the level of management
this is a kind of spiritual stimulus
which exists uniformly for all people

and this incentive
he really has the task of Macrosalvation
as such

those. Macro Salvation task
local action task
it's still the same status and meaning
Spiritual Administration

because from the point of view of the Soul
this is the phase of the section yes
for example we can consider it like this
The spirit interacts
with current and past information

Soul with information
For example there is no future and no past

but as soon as we start to withdraw
control for the current time
then we immediately move on
on the physical body of a person

that's where the difference lies
states of some so to speak Reality
in a general sense

what is in the current state
everyone perceives their physical body

how to determine the current time for example
here is a person saying that he is here at this moment
please, does this mean this is considered the present tense?

i.e. the factor of presence and self-perception

and when we start to look at this position
from the point of view of how God perceives Himself
i.e. when we begin to perceive ourselves in this perspective
from the point of view of definition yes
how exactly does the time interval mean

then it turns out that the person is located
as if in the center of some absolute time
and closes all the time on itself
all processes at the logic level

and it turns out he's starting to get closer
to self-perception

for example, how God perceives his hand there

Here He perceives her, for example
in the form of
Sveta
matter yes
and Infinite Action

i.e. the hand that is near
For example there is a tissue structure near the hand
this is all Infinite action is favorable and

that's what's interesting enough here
in observing, so to speak, the Action of God
that He has events that are in contact
there with the skin of the hand
they are favorable events

and when do we start working in this regard
we see that they are initially beneficial for everyone

this is the system of Macro-rescue Macro-regulation
where each person's personality is saved

and it turns out to be the Spiritual aspect
as if the technological aspect semantic aspect
study management as such
consists in the fact that
to be able to convey, generally speaking,
this technology of God
technology of man knowing God
to the level of each Perception

i.e. there is still a very large one
like a social or educational meaning
Spiritual plan or quality of management
it is the ability to transmit knowledge
which, for example, are not necessarily even in that person
who transmits

but generally speaking it could just be a person
read some protocols there , yes
someone cured someone
due to the technology of Perception for example Yes

at the expense of means Well, in fact, many can relate to this
to the structures of Thinking
i.e. a certain position of Thinking

in the right way there in the right place yes
spaces

and naturally if you look at this
from a sort of pragmatic side
the kind of person who will read
such a text for example
he will naturally often be oriented towards that

to pass on this knowledge

i.e. therefore there is still a kind of moral status here
in this plan of management here
engage in management
try to make it well maybe simple and accessible
for the main number of people at once

this is also the case in some cases
this is a special task
although you can just show the controls
how you view it or how others understand it
i.e. you tell it in such a way that others can quickly learn
and you can do the management yourself
as for example you want

i.e. no one limits you
but at the same time when others are studying
this is natural it should work
and on you too
i.e. when you teach you work on equal terms

and this is the level he speaks about
that with control technologies
in Spiritual status
the principle of equality is being developed

that's from the point of view of when people practice
and begin to control Reality
then they become equal
in front of each other
and there before God
from the point of view of their own logic

because one person controls the second there is the tenth
and to say for sure there is no such criterion there
for someone to say that someone is in control

if if of course generalized
some same process there
and everyone is doing the same thing

that someone manages more effectively
someone there is less effective

it's another matter if there are different objects
then, for example, one person is engaged in management

according to the task of another and gets the result
this is a correct linear plan system
well almost linear
where it is clear approximately who controlled what

although in my technologies I try to give
it is precisely the directions when it is not just management
as if the tasks of another person, of course
and first of all it is training
that the other is just learning
and does it at the level of his own freedom
some personal actions
which he likes or dislikes
but he has to do it
and he carries out this control
in fact, it turns out that it is independent

when for example we consider
this system
as a system of prolonged action
for this particular person

it turns out that he begins to perceive harmoniously
the essence of one's own events is from the point of view of action
Just imagine a person is walking and looking at a magazine
and at the same time if we consider
that it is both God and man
and he looks at the magazine

so what's the difference here
he takes there looks at the magazine
it's like he's just reading something in a store somewhere
the letter is the same yes
The perception is the same

and that's when we see
that there is no fundamental difference
between there fundamental
there we will call it Spiritual action
or by action there well For example they are considered there
often technologies where some there
trans status is special

it turns out that here, no matter what it is called
The main thing is still that Reality

which exists in the World
it's objective

i.e. well there first of all
for people generalized objective Reality
this is physical Reality
although this is not the main thing for everyone
and people have periods when the most important thing for them is
Spiritual, namely the Soul level, yes
his personal condition or the tasks of his personality

but he still understands
that it is based on the level of physical Reality

and that's why here is the transition
it depends on the level of objectification
such a physical one
to the level of action
says that whatever the Spiritual practices
were not used
no matter what technologies or conditions are used
the main thing is to get the result anyway
comparable to collective Perception

for example there is a possible global destruction
through nuclear weapons
so naturally we do that
so that there is no such weapon

and if one person was convinced there made management
even if it's of a different type
but I saw that Consciousness acts at a distance
there the events are regulated by light

then he already falls into such an aspect
that he should of course still work in this regard
whenever there is free time
if it's not a threat there
if he starts to threaten someone with something
then work specifically
so that there wouldn't be a nuclear explosion , etc.

i.e. here the aspect of Spiritual action arises
that's exactly the meaning
that management is more of a spiritual action
in the plan it means Well or what about information transfer ?
semantic, as it were, understanding of the World

than not to do it at all

because in that case a person begins to act
if he is involved in management and helping others
i.e. it decides the aspect of the moral plan and type

and as if there are certain levels of the foundations of society
are oriented towards Infinite development
itself is infinitely developing

and in the second case it turns out
that after all, given the fact that there is
completely objectively manifested systems
it still works out then
at least not technologically
but in essence it is still a certain position yes

and this position if it is aggressive there
if it is either completely neutral
it still needs to be reformed
towards, as it were, greater unification of people

because the more united people are
that's what they mean Well, they are more protected.
and here especially in the system of collective Consciousness
there is still such an aspect here
what and equality
and that means the unity of people
this is the level that allows
practically decide well in general, those are the tasks
which are specifically related
with the technology of Eternal Life and Eternal Development

because in Eternal life and Eternal development
We are obliged to solve this systematically for all cases of life
there is still a logical type of question
For example there a person is engaged in Infinite time there
you could say that
management

but this is precisely the aspect of even such a plan
why why how and in general
is it necessary to study there
Well, just as a question, such an option exists

and so, as an answer, it is desirable to develop

a concept of something like happiness, for example
I said this is one of the concepts

but when you consider
management from an applied point of view
then the concept begins to work as an applied system

i.e. it is enough to just know conceptually
your personal status
that you manage, well, because it is effective , for example Yes
and logically it is still possible to save people
and it turns out that it can't be done any other way

that's where the bulk of the people are
Generally speaking, there are people who don't just do it
and they do the next job very quickly
that as soon as they begin to be convinced of that
that they really help
they start to help a lot
and right away

i.e. they have a concept of this, well as if of Spiritual status
in management in transferring knowledge to others
Well, it just turns into action
because if a person has mastered something useful
Of course I want to pass it on to other people right away

and when this one, well is it a system or a task?
transfer of this information
so it also comes down to that
what do you decide at the level of well , some
namely global actions
i.e. this is where you orient each person

then it turns out that you solve this problem simply like this
as God gave the Soul to solve the problem in this World

because the Soul practically controls
in general, the whole Reality at a remote level
not even on the Infinite Primary
and even at the level of local systems of Perception

you just need to take it there many years in advance
and it is clear that the Soul decides
almost all tasks on the structure of the World
from the point of view of specific tasks

i.e. take it for 25 years ahead
and view your events
at the current time

and you will see what is there in about 10 years

visible
absolutely all the details of current events
literally as if it were happening
in just 10 years
but it's happening literally right next door
as if this time does not exist

this is the effect of a kind of rapprochement between the Spirit and the Soul
on Infinite Development

and if we consider
what does the Soul mean to realize the action of the Spirit
it turns out that in Infinite development
all systems are very close

and in general at a certain level
this is a single level of the body, meaning physical
matter Spirit Soul Consciousness
because there the Soul looks like a material system

we know what it means Soul is like that
that the body is also a part of the Soul
in terms of precisely the informative, so to speak Yes
more manifestation

and on Infinite development
when we consider
it is precisely the semantic one or something. The spiritual aspect of management
we see that in the case of a clear, as it were, control system
when you practice systematicity
The soul begins to actually determine
material status near her

i.e. it is a very special state
when there is practically a birth of matter
at the moment of contact with your Soul

and by the way this is quite an intense level
as a healer
i.e. the Soul when it is in such a state

enough for example well, touch
even on optics with a person
the person is recovering
as a rule, it is immediately obvious
on the material level
his matter is returning to normal

i.e. practically just the tasks are often different
if he wants to learn something there

and therefore in terms of self-healing
then he can, as it were, at a lower speed yes
practically independently heal the tissue

because we are talking about it anyway
about self-healing
the same person
he sees your state of mind
and he begins to recover
because he sees as if Well, the criteria level
what is as if for example, it is possible

i.e. he begins to understand
and the mechanism instantly shifts to itself
and takes control

if you have anything else to say
in the form of words from some lectures
it turns out that this path will be even more intense

but it's not about restoration as such
consists of
and that management must be carried out
as follows

what when you consider
For example there is a spiritual aspect
and give some characterization of necessity
this is exactly the kind of action
as Spiritual status of management

then it still matters here
that in the long term for example
namely the Spiritual level
it is practically a single level
from the point of view of integration
here are the Souls of the body and Consciousness

and here is the derivative level of the Spirit
when united with the Soul
then it turns out to be roughly the same picture
when a person
strives for God and approaches God
then the action of human awareness arises
there is all external Reality
and he practically begins to control
just like God does

and this is when the Spirit comes closer to the Soul

Well, it integrates into a single level, so to speak .
then here it turns out that the effect is the same
what is the investigative level there
for example Spirit yes
which is also realized by the Soul
and partly it can be
in the action segment created by the Soul
begins to merge with the Soul

then it turns out that this is just the Eternal body
which contains
two integrated i.e. merged systems

when the Spirit with the Eternal Soul
Well as if it connects
it looks like a sticking effect by the way
even at auditory levels, for example, fine hearing
you can hear the primary element as if it were sticking

and when it goes further
after this sticky element
so that means mixing as in some vessel yes
information of the Spirit and Soul
then it turns out to be the Eternal body again
because the interface is displaced

and the body becomes at the level of control
for the events of Spirit and Soul
for Spiritual events and events of the Soul

and it turns out that we can receive the Eternity of the body
when we work
with a kind of Spiritual aspect of the state of the Soul
with a logical speculative level

for example logical phase
explanations of their actions and deeds, etc.

and now here, make this kind of control
take out the optical phase of the Soul and Spirit
into a state of initially separate optical systems
then squeeze them
well, like in some flask trying to start stirring

and as soon as the first areas of adhesion
integrations appear there
see your physical body
see exactly Eternity
The eternal body that controls
not just there is the Eternal body as such

and the Eternally governing body

body than if you look further
of course there is both Soul and Spirit
but precisely due to the displacement from the Macro-region
The Soul and Spirit are rigidly projected as if growing into the body

and by the way this is optically very clear here
clearly visible
straight hard lines of control pass

and then any of your problems will naturally be solved
because your body has
Well as if with superpower
from the point of view of the general stability of the processes of the World
from the point of view of the fundamental processes of the World

i.e. around
bodies
Souls
and the Spirit
there are Consciousnesses
in such a state, events develop favorably
along a fairly rigid line of will

i.e. you don't even need to do anything else here
just enter into such a position and do it

try when you do it now
act not only on personal goals
and according to other people's tasks

try to understand them subtly
and go to more concentrated action there
in terms of helping other people
I will work with you

and when you do the management
try to see what if you are considering for example
the management aspect is somehow remote
and suddenly your gaze fell on him
and do you think that it may not be necessary to manage
this aspect of the action

then watch it anyway
what if you looked somewhere on the controls
that means it was needed for something

n that's when you're at high speed
browse and read

that maybe it's not really necessary
take a closer look anyway

and here you will learn to see
differentiated system of action
why is some element manifested somewhere
at what time should I try to watch

and at the same time you should see
practically the following control property
what if you for example Well, take action
between some events
i.e. well, you're just approaching some event

in this case this event can be
well, not quite in line with the goal
for example, a further level
i.e. it can be kind of calm
and which you don't need to deal with

but if the event was highlighted
then it is necessary to take it out
to the control level
that's why it lights up in a person
always some one or that level of events

it turns out that since it is highlighted
therefore it is natural that there is one here

this is the task of the next management

and here is this section between
primary factor
between the target
he is always like this
that for example you can scan the field of all events there
remembering old situations
but it may be that none of the old situations
is not being implemented
that's exactly how everything is calm, on the contrary, good, yes
and there can't be any problems of the same type

so there should be control
not like those old fields there
and control over a new level of events

and therefore it is precisely in the Spiritual status of management
it is possible in the sense that the Spirit is in control
this is a fundamental level
this is often the most fundamental level

in this Reality

we can separate
this is the management status in this way
what we are deducing is like an event
which we don't need, for example
into the structure of time which in principle
well it gives an opportunity
this event will develop constructively
and somehow independently realize myself

and this is the level of time
which is created by outputting
Well as if some section of events
to the status of being somehow timeless
and the status of the action by time

here it turns out that this is the level of the section
this is the level that still comes down to this
that you need to solve your personal problems
including often at once
or there in some specific place

and here are personal tasks, this is the section between
an unnecessary event

and the event turns out to be necessary

or even more so it looks like this
that the Infinite Environment of Eternal Development
and some events that are, for example, unfavorable
For example there exactly for this process

and it turns out that all your personal tasks
have the same nature
and by the way this is true
from God's point of view applies to all tasks

it's just how God treats people
that he thinks that people
they are all smart enough at least
but they definitely have all the mechanisms for implementation
it's only a question of will

and that's when we mean as they know as if they have
these are the mechanisms for the implementation of Eternal development
this is precisely the manifestation of will
this is once again the process of freedom of choice

if we have freedom of choice
to vary it right here
for a free amount, for example
Well as if outwardly independent
and Eternal internally
then it turns out that there is no clear manifestation of freedom as such

i.e. if we start somehow with the concept of "freedom"
to move or to move relative to something somehow
this is the concept of "freedom" when freedom is absolute

and it turns out that in freedom of choice there is this absolutism
it's there again
your physical body there
your Soul
Spirit
Consciousness
where you have the right to make any choice again
and any decision yes in every next second
and here it is
or there in a millisecond in every moment the next

it turns out that this is the level when you can do it
all the time any action
this is the principle of freedom
separation of neutral environments there
to levels of management and management action

and here it turns out
that as if deep Spiritual status of management
it consists in what you have to see
that any negative signal
as if maximally unfavorable
it is not implemented in any case
because that means you are there
in the system of a kind of primary action
where everything has already been worked out by earlier technologies

i.e. you can rely on technology
not only their own
and embedded in the collective Consciousness
so where is the level of solving situations
related to the fact that we have a kind of support system
there in past events
or we are due to the fact that an event is being organized
in the future, they now urgently need to be reprocessed

you take it and very urgently project it into the future
all systems known in this regard from the past

well, i.e. there is a task, take everything that is known
and dropped a little further
so that the solution would come from the future again

i.e. there is some kind of coordinate time axis
Well, spatial

here is the time of the future event
and this time is such
that the event is rapidly escalating
for example, you need to deal with this event

you take in the past time
generally known methods and systems
throw it a little further
and you begin to shine with the light of the future
to this level

i.e. firstly, you use all the experience

secondly, you still control directly
and then you filter onto your body
only that light which is already the light of action

i.e. the body is the transformed light of action
even your personal one turns out

what is this Action of God
It is clear that God is at work everywhere
which means it can still be seen
how you act with your body

and since your personality
this is all that is located well there inside the system and knowledge
your inner world
there inside the body outside the body
this is all your personality

then you can see
like this external optical action
integrates with the internal level
namely the state, for example well which can be different
not quite favorable there

so if we consider, for example,
there is a state of let's assume melancholy and a person
but this is a certain state
which is based on a specific platform there
well where is there an understanding of some processes

dispel this state , so to speak
you need to be able to do this linear
in principle, such flattened information
often just a little bit of dilution
one segment from another

i.e. dilution of some level of information
there are three components in two
starts to lead
to more harmonious levels of management

here's if you consider it
not in the plan for example there is human longing
and in terms of just any action
what does it mean exactly to increase segments
increases quality

i.e. well, the One God who is one in the Physical Body
has already created the World
where the quality is different Actions
investigative action occurs
here is the change of quality systems
this is already, in principle, an investigative action

and it turns out that based on this
we see the following picture of the world yes
what is the fundamental meaning of management
where the Spiritual aspect is already expressed in action
investigative system
he equates
initially fundamental meaning to the search

i.e. a person seeks Spiritually and considers it
he thinks that this is enough
just the search itself or there for example state

that's what happens in the investigative system
these systems are generally equalized
that he still finds practically the same
that he actually set himself a goal
in the future

and from this we see
the following development system is obtained
society as a whole
what if we consider
processes of the future development
as processes that exist in the future
and are the will of the people

then we are doing the right thing
i.e. absolutely freely by the creative will of people

and we see that the right action is that
that their light of these people
carries structures that are beginning to be built
due in principle to the division of information
i.e. into separate segments
one monoinformation

and when we
although the information is preserved
in this case, a person receives different qualities of this light

if you take there then some plane
divide into three parts
and move one segment away from the other
in this case, save the common point yes or the common area
that is already another property of this optical region
arises

and that means they do exist in light optics
lines of some tension
i.e. the whole World is always projected
to some element of a separate system

and it turns out that if you divide it a little
it starts well like "solar wind" yes
roughly similar concept
and this light flux is quite strong

i.e. minimal separation
and already a completely different system of events
other connections in general

how everything looks in optics
there is some kind of plane
with certain characteristics of the throughput
you just have to make a little click
how it instantly gets to another information object

and by the way, this is again a fairly powerful mechanism
there is treatment of a person
managing events towards the Norm
the ability to block these systems , so to speak
similar to some leaves there
in information they are flat
in the form of triangles mainly
closer in shape to some petals sometimes means

well, more like static canonical figures

if you can somehow move it apart
these are the screens externally
they must be made management
a spread as if from the outside
not from within because from within is your own light
and from the outside

having done the management correctly

you receive the Light of Eternal Life for example
even with the right optical control system

and this allows your events among other things
to improve there means to standardize
in terms of some distant events there

that you are engaged in event management
your goal
this is understandable, naturally, in terms of further action
and you can watch this level

but that's exactly when you look from the outside environment
it turns out that you work through external space

well if we take it there
let's assume there is a level of some initial space yes
and this level means we will start implementing it like this
how information is spread
in this space

then it turns out that we have practically
Well, that's the status of management
that this zero is, let's say, a certain space
shines with the original light like this
that you were already there in this system
and built a space
as if by its external impulse yes

i.e. your impulse was already here
unless you are there yourself
but for example there is some thought of yours

and here it turns out
that here is the detail of the whole World
on the presence of any element in this world
it comes down to what can be identified here
private elements of presence

for example some thought
some action
for example, how does God look at what a person has done ?
for some expired option
and how to give him further knowledge

He is considering some specific action.

physical for example and
or there is Spiritual
or mental thinking so to speak

and at the same time it means it's immediately clear
what should be the next action

addiction
for example Thinking
means with action
is also quite an important system
when interacting with God
where God often looks
Element of Thinking
and actions
at the same time or separately
but as a rule God is watching
separately for Thinking
and separately for the action event

and when the elements of Thinking and the event
match
then here you can always
how to profile some situation

and you can do it like this
so that these elements always practically coincide
i.e. they can be such that you can sort of
Well as if a controlling aspect
it means simply to pull to the level of Thinking

i.e. make the control platform in information
what is management
this is the ability to concentrate in all the events of the World
Well as if the balance of information is actually yes
in this technology

and if you bring the idea here
due to this kind of sticking of the seal
then it turns out that the thought begins to be realized

why is this important I think in management
First of all, look at the event structure
and then, if necessary, on Thinking
and then only if it is allowed to us

if there are any negative thoughts there
you need to help a person, etc.

and so in principle there is a view of the event structure
and this is still not control over Thinking
it's like just working with events
where thoughts are completely different
and so, like, this is this intimate autonomous
the environment of thought that exists in a person
and there it is quite well manifested
as a system of practically personal action

and it is enough to look at the events
you don't have to watch it
what thoughts led to this

and so if we look at a person, yes, in the future, it means
and he does some creative actions
you can look at it
He doesn't hide it as a rule
there except for some individual moments
Well, he just goes outside, he goes to the store, etc.
normal actions
no one is forbidden to watch these actions
and help there
Well For example so that there wouldn't be any terrorist attack, etc.

and if we speak from the point of view of Thinking
then Thinking must be a separate level

and so God solved this problem
a person who possesses
the possibility of integrated action
it means it must be in different positions at the same time
Thinking is one structure
actions may be different

but this is also the principle of freedom

and that's when the coincidence comes
For example there is a man driving
he thinks how to do it and does it at the same time
this is again one of the positions
opportunity
at will to concentrate there at some level of management

its action

and get the result

but here there still exists as if originally from God
independent system
where there is Thinking, there is action and event
these are separate systems from the start

because on a material level
God gave one structure of governance
at the event-material level
and Thinking is also a level of knowledge

and it turns out that if we set the task
how does one know the Physical Body of God directly

means that there are certain systems of actions
Perception of space
and due to Thinking you can move more dynamically yes
or for example to have at all
significantly faster development systems

so it turns out that based on this
here is the division itself
on the external environment, the material environment
this is also the Spiritual aspect of action
where the Spirit is the connecting link
between there Thinking and the human body
for the Soul

i.e. the Soul also distributes the system in the same way
as God does
and it turns out that we can in principle
enter quite a lot
there are no criteria for further actions

i.e. we can consider
what for example detailing or division
maybe not only there
to the level of the Soul
there is the Spirit
Consciousness

and in principle we can see here very clearly
that there may be other subtexts there that are not material there
or for example event level

and when these systems are fully implemented

i.e. any action leads

to Macromanifestation to Macrolevel

then the following is visible
that man is born free
it can always be in conditions
that he is always free at all levels
physically there spiritually

and the main thing here
this is the core of the Eternal development of Eternal life
and here is the reference level
on the Infinite level of Eternal life
so that this rod remains permanently
as if inside a person

and when do you start
well this is some information there yes light
well, your exact knowledge
translate to level
practically there is no further super long-range action

then it turns out that your stability is personal
this is also the Infinite Action
i.e. the more stable you are
the more clearly Infinity is revealed
in the form of specific events

and when you are already watching
to the most distant events, as it were
in Infinite Action
which leads to you personally now yes
in the current tense
and at the same time you see
for example, some comparative events
that happen near you

then here it turns out
that this is the state of Spiritual understanding
some action
this is the integrated state
which again should be based
primarily in the practice of previous life

i.e. a person must always understand
what if there is a possibility

make the control this way
that the management practice is such
what the preceding events
Well for example, they help a person

then here at the section level
between the past and the future
there is precisely the Action of God
which is completely transparent

and here is the Spiritual aspect of action
This is of course interaction with God
at a certain, sort of quiet, familiar level
where do you see exactly the integration of actions
between God and man

i.e. the person is always at this point and in this position
asks God what to do
and gets the result

and when you start to see
that the person is quite familiar, let's say so
interacts with God
starts asking gets answers
then the third level arises here

what is inside a person in the tasks of a person
there are specific
systems for identifying, so to speak, the Actions of God
based on autonomous even tasks

i.e. God originally laid it down
some knowledge some information
and in principle it works out here
that this knowledge or this information is such
that the person is practically like from the archive of a peculiar
this information is revealed by yes

so that this archive existed and was called something
then it turns out that well For example there is an archive at the cellular level

it turns out that we need to do it the way God does it
put such meaning into any action
that we are creating a scope of action
Well as if a background to the action
and simultaneously create a level of further action
i.e. as a reference level

and the level of further action

and now if we already approach management in this way
then of course the spiritual meaning of management
that's where he exists
that it is a much more efficient system
engage in Macrosalvation management

why not do it
because at the same time create
and the base as if the initial level of events
and the level of implementation
i.e. spatial system
which implements events

anyway, it's still possible in principle
only for targeted study
management as such
in terms of changing the whole world
there are events from all over the world

and when we see this
then in general it is quite easy to explain
what does Spiritual aspect of management mean
namely the semantic aspect, i.e. the meaning for what
to get practice yes simple answer

to get real salvation of people
not some other level of a different type
and not another type of action
we can get it directly yes

by the fact that we practically begin
Well, maybe I should visualize future events?
through the structure of your physical body
and to receive means comparable events

well, like this for example God creates events there
there, let's say, it creates an event in the whole world

with that level of contacts
which occur between God and man
it means God is doing his job all the time

and here is the skill in a large number of cases
make such a layer of control
of course this is comprehension

plan of management

i.e. meaning Spiritual meaning
the meaning of the action of the Soul in management
as such a phenomenon

because in this case
I just took the concept of "management"
and showed that the Spiritual meaning
or compare

or higher with the normal level of any other control there

something else may be, well, that 's what is meant
if a person does not practice Macrosalvation there
and he thinks that it is right
and here to prove it to him
what is more correct through Macrosalvation

here we need to show technological systems
which I have just shown
that they are more expanded, more complex
or often so fundamental
that there is no other way to solve it

when you show it
Well there systematically several times
I'm not saying that it's necessary there
to convince with a large number of words
or somehow agitate physically
I'm talking about that
what is your personal position
your conviction
your internal state

This is the level that allows
practically act in this way
that you are your own condition
give this level of Infinite Eternal development
in the collective Consciousness
both for myself personally and for others
just because you personally believe
and this is training for others

i.e. you accept it personally
you are personally involved in this
this is training for others

and for example there from the point of view of Eternal development
not accept Eternal development for example to a person
as if it 's quite unclear in general, yes
for ordinary Perception

so it turns out that here it is just like that
the main number of people
immediately oriented towards the Eternal development
to implement exactly
in the structure it turns out to be its own thought
in the structure of their own actions

it turns out that he is this element
i.e. the light of the future where there is Eternal development
still shines on their specific action

and here as an applied tool
this lecture
by the very meaning means the fundamental meaning
Spiritual Administration

where as a seminar action
So you work exactly according to your tasks

I mean, I just want to show
that here is the search for the meaning itself
fundamental meaning
this is also the next or let's say the following control

and you can quite see
that this is the semantic aspect
this is the concentration of meaning, so to speak
this is also a certain level
your own management

i.e. if you put the question this way
then you should
so that this question is clear to you
in terms of there is Infinite action
see here
that since in principle any manager
he poses a question and decides for himself as a rule

then here is the setting part of the question
this is what connects already

you personally means with the past tense
but this is the past tense
it is practically in a niche
which is projected through a kind of lens of the future

i.e. we are looking to the future
but we see the technology of past development

and that's when we start to derive the structure, then
Well as if into the structure of the cell of the past
it is precisely the Spiritual aspect of management
in order to give an opportunity
new systems to be realized

and here for God it is very important
when people, for example, have some new knowledge

apply use implement
and it turns out that here we have
practically in general the following management status

what does considering mean
for example, in the Spiritual plane
or in the Soul plane
some distant prospective events
here from the point of view of the Eternal event
or in the form of the Eternal level of events
or the Eternal Event as such
there for the creation of the World

you can see it here
what is a person in principle
for example, having set yourself up to overcome yes
some system for Eternal development
essentially starts from one initial matrix
for everyone
i.e. where all people are oriented
on precisely Eternal development

and this is like a primary push, yes
birth of man
where does it start producing
some of my own events
own systems of action means
and receive, for example, what he is in the future
already exists Eternal
it is still a structure of personal initiative

i.e. personal push personal development

and here here
when a person develops in this direction
he goes through some systems, well, comparative ones
for his personal exchange
with information from the external environment

and that's when this information from the external environment
for example, it is discrete
i.e. it does not have a permanent action factor
or it is not immediately recognized
then his development slows down
if it is immediately recognizable
this means the development is more intensive

and here to understand the neighboring environment
you need to develop an attitude
just like you developed an attitude towards that, for example
what is systemic action
this action is more conditioned
for Infinite Development
than for example one-time yes
in terms of Macro-creation, for example

and when you look at management in this way
what does remote action mean
Well, its characteristics are the same as now
then you have a whole arsenal of sorts
as if experience of management of this type
what do you see remote control
as my own now

and yet nothing new
It seems like you don't even need to know there urgently

i.e. you control any level of future events
this is what is complex
as if some kind of collective confidence
when a person knows
that another can too
he can
and he can do the management because
what is the goal of management principle
and for example then it is not even necessary there
think about it for a long time
how does this management work

why is the knowledge system distributed

for example , in the Spiritual sense we said
that it is much more effective to engage in management
what not to do
this is the Spiritual justification yes
there can be a justification for a person before himself
what is he doing right what is he doing

and when we start to look at this
well, not the position of justification as such, actually
For many, this is a natural state.
and they don't have such thoughts
I'm talking about those who, for example, don't know there, yes

here's how to make it so that people who don't know
they found out about it
for this you need to be there
Well, show it in the form of verbal information, yes
for example management

but in principle there is such an aspect here
that to act as God acts
God acts by creating constantly
the following system of knowledge yes
and some Reality

this is a must see
contexts of Spiritual development thus
that the Spirit is somehow ahead of time
and delivers to any already pre-temporal event
some event of time
some aspect of management

i.e. some kind of property of the Spirit
so that events are positive

follows almost entirely
Well there ahead of the level
some environment means yes informative
which may be may carry
some unfavorable system

although in the system of so -called adverse events
there is an internal line

The main thing
so that these events are not radically unfavorable

and so in principle at the level
some kind of indirect actions
you just have to try to keep track
the main idea
well, how is the ship sailing
there are some small icebergs there
they may not be significant

the main thing is to make the management so
so that you get exactly Macro access there Macro system
and in any action they saw
after all, the Macro-meaning of one's own action

and when you are like this Macro-meaning
you start to visualize
as its own kind of control system
you all fall into stable management
in conditions precisely as if everyday

i.e. time distribution
on the Spiritual aspect means management
where there is control of Spirit and time

or the Spirit controls time

you can generally speak like this
for example, to rejuvenate there
or cure some diseases
if there are diseases, etc.

and at the same time, this is precisely the compression element
the interaction of Spirit and time means
exactly as if in the direct sense
after all, there is time, it is a system of events

if we take a person out of there
there is some component of past time
and the events were somehow negative

we thereby immediately cure him
or we somehow regulate its event

and here it turns out
what exactly is the Spiritual aspect of management

i.e. the meaning is spiritual
what can we do then in pure form
see the structure of the Spirit
if we are this very level of management
which is coming
from your own system of perception
Means Well, let's translate it into the structure of the Spirit
acting in Infinity

i.e. the Spirit that acts in Infinite time
for example, in terms of your level of control
and from the point of view of general control systems there
i.e. generally valid
anytime, anyplace

when do you start
Well, this property practically means applying it to yourself personally
it turns out that time can be compressed quite strongly
i.e. event time can be compressed

for example, there are many questions
and God must answer all questions at once
He must compress the question time.
and here then is precisely the Spiritual meaning of management
consists in the fact that
what exactly Spiritually can this be done

i.e. here it is just a phrase
what exactly is the Spiritual meaning of management
this is a level after all
that it is possible to control other semantic aspects
and control the Spirit

and that means we see not only the concept of "meaning" there
namely the concept of "Spiritual action"

and that's when we start looking here, for example
how does god work in terms of governance

then for God it turns out for God here
there are no special problems
in terms of differentiation, perhaps?
because for Him
what is the Spiritual aspect of action
what is material

it's the same thing

and here we can in this technology in this lecture
see the transition between
Spiritual level of actions
and material

i.e. if you ask the question
how does the Spirit interact
with the physical body of a person
here you can see it very clearly
how does this happen in general
at the level of the mechanics of the process, yes
or even some kind of optical physics

i.e. you can see
that due to the fact that the Spirit is approaching very quickly
to the physical body at the task level
we get a healthy body

this is the practice
can be implemented very clearly
or normal events

means movement
in such a kind of philosophically divided environment
between the Spiritual meaning
and action
i.e. we take the structure of events
and we make a reflection into the inner front as if
of this optical wave

and due to the translation it means from the Spiritual action
here is some understanding of Spiritual action
from what you understand
not only Spiritual but Macrospiritual meaning

you get a healthy body due to that
what are you doing
with this, well, with these rays
on yourself
actually on other people
not only there your healthy body
if you don't have any health problems
then we are talking about other physically healthy bodies there

and in the structure of Eternal development

is there anyway means resurrection
mandatory undying
and on average, let's say, just a healthy body
This is a mandatory system to follow

and here it is important to see
your own status
precisely in the Infinite development
where do you shape your body
only due to the primary impulse

i.e. as if taking control away
in the area there Macroattention
in the area of Macroconcentration
by his own personal will

and so make such a concentration at the level
The spirit interacts with the body very quickly.
just a big, like, Spiritual Scan or something
Work spiritually with the body
and decide
your events and the events of other people

I will work with you
solve intensively
i.e. don't stop in control
I spoke and immediately started working

when you work in such a management system
try to see
well, for example, the next task at the same time

that as a certain system of evidence
what is this Spiritual action

and the point is that it is effective, etc.
namely the level of management according to Macrosalvation

For example there according to my Teaching
the level of control is always equal
what do you work
With soul
In Spirit
Consciousness
or there with the physical body
at the information level
i.e. radiation for example yes, the optical comes from the body

so you should always try to see the following
that an infinite number of future events
some actions that exist now at this time
these are often actions that
Well, first of all, as a rule, you choose yourself
and you see that you are doing it yourself

but besides there are extremely unfavorable ones
here again, if there is such a moment
levels
All actions are basically determined by a person for himself
on one's own

and it turns out that from God's point of view
It also does not define adverse effects.
for a person

then there is some kind of external environment, yes
unknown quality
which defines these systems in events

Well, it may be that people think so
that there could be other people there, etc.
so in terms of if it is unknown who yes
if it is known then it is immediately clear who
from the point of view of what could be next next person

i.e. if the negative action of one person is revealed
it's immediately clear who's next, perhaps the one who initiated it

but here it turns out that it is in your control
it is in the technologies of Eternal development
I still always come to the same conclusion
what do you need to be able to do
these technologies are really possible to feel all the time, yes

For example there we raise the question of semantic systems
implement applied technologies
to implement as if at all levels

and if there for example, it occurs
that there is a lot of work
this is the light of future events
or is there a high concentration of events there?
and you need to be able to, for example , be here

there to consider the events ahead
This will happen as soon as you develop prognostics
you will see it all the time
More events ahead

and all your further actions are as follows
that you will still perceive
from a series of events some main signals

and here is the skill
in such a large amount of information
work calmly yes for example, to live there forever
direct your actions towards Macro-creation

this is the technology, it's the same
as God does
in a large number of events
He chooses some separate ones
as if from the point of view of human logic yes
aspects most important
and here he chooses
the most important aspect of Actions for yourself

i.e. as soon as a person learns there
find in next action
the most important aspect of your actions

i.e. what was it originally for?
perhaps I set this task earlier
and this task has been accomplished

then you get it right away
control
there the whole system of Macroevents actually
related to your action there

and at the same time you see
what if even you want to do there
more management there to transfer more knowledge
then you can do it calmly

or at the level of telepathy
or there in the future to explain in words

but nevertheless the situation is as follows
that the management status is the main one
precisely according to the personality structure

this is to find again some kind of spiritual meaning
in all these external events
already for myself

and it already exists here
The spiritual meaning of your management as such
i.e. the third meaning of this phrase

when you find in other systems
your own
here is God finding His own
does everything at once
but He finds what He planned for Himself

and when you are in the event structure
find
this is my own line
then all events are favorable for all parties
are already laid out in the control context

because originally God
outlined the system of the World as follows
and it is being implemented now
that finding your own system
of its own essence and control
or there own actions
as a rule they are connected
with help for other people means
This is the basic concept of Macro Management

because
that you are in control of your condition
For example there at the ordinary household level
what are the elements of Macro Management
it's all the same thing completely

and by the way, from the point of view of management
for example, a manager who deals with my technologies
he always controls of course
absolutely, almost one hundred percent
is a state there

and it turns out that here is the next level of action
he is such that you are in control due to the fact that
your condition

if you find your essence of management
well, in a separate and controlled environment

then it's the same thing that you mean you are
Well as if in a natural, ordinary state
actions there management

i.e. you don't get tired then, for example
you can work a lot there
let's say work there there is an Eternal number of years
or Eternal number of years to do some things
and at the same time you are in such a balanced state
where is the external event that you control
and your condition
these are generally the same order of magnitude

and there is no sense of any next thing there
there is complex action, etc.
i.e. the ability to be in this system constantly
it's like some kind of addiction, yes
to the Eternal level of events

and this is also an important aspect of the Spiritual property
where the Spirit is enriched by experience
almost even viewing experience
your future events
i.e. you look forward
brings you the following knowledge
and you are already ready for the next events

this is also one of the system control points
when you are ready for future events
because you are prepared
due to his previous experience

and also prepared by that
that you know the methodology of management technology
and at the same time you also kind of scanned it beforehand
future events
approach the solution in a sufficiently prepared form

and here is such an integrated system
this is actually a very powerful level
namely the Eternal development of civilization
and well , and of course each person

the main thing is that each person is unique
in his own and in the general understanding

and just think about it here
in this sense creatively
and you will see that it is already real
realistically achievable value
from the point of view of even logic
as if viewing the situation

i.e. logic says that this value is achievable
and this is already a control fixation
quite correct i.e. quite accurate

and once you get to the point
all your all events are realized
but already in the structure that you control Eternally

i.e. you are in the Eternal Control system
you live forever
and you feel it
don't just feel it there but you do it
this is what you do
when it's work for you, so to speak
Well, in fact, it's a matter of a larger context of understanding

then yes already by ninety and sometimes up to one hundred percent
the level of implementation increases

that others are starting to see it too
which in relation to you for example
Well, somehow they are developing
i.e. they are looking at you

and when others already see
this is already a fairly powerful transmission
transfer of knowledge
and this person is definitely there
in the system of Eternal development
i.e. he lives forever

Thank you very much for your attention

This concludes today's seminar.
