

GRIGORY GRABOVOY
The Teaching about God
Transformation of action
16.08.2005

Hello again
the topic of my seminar today
my Teaching about God
Transformation of action

In this topic I show
how any action
having some well vector nature for example
directed action
target action
can be transformed at the moment of action

i.e. to create such management
what if we need to change at the moment of action
some situation
then we can use
information generally speaking of the action itself
in order to change the situation

i.e. use the action itself
or you can change the action itself any
by external control

i.e. in this case
if we change through external control
we must create external space, etc.

so when we talk about that management
that at the moment of action we change the situation
then in fact we are talking about that
that we are at every point of control
we are at this very moment yes

those. at the moment of action
the whole situation is open before us
as a structure of sorts of open space

i.e. we are present
and in the structure of the current time for example
and in the structure of the action

in the structure of time as if the following
behind the action

it turns out that in this context of management
time seems to expand

i.e. at a certain level
we see time for example at the control point
and below this is already space

and here is the transition
time when it turns into space
this action is carried out in this way
what is the Soul of man
is in such an integrated state , as it were
and perceives the entire external world
as its internal structure

i.e. it turns out that the Soul is active
actually highlights some fragment of the World
and transforms, for example, his personal action
into the big picture

for example, how God created the World and perceived it

He also perceived it in Action later
the existing world

so it is similar with the Soul of a person
there is such a property
that the Soul, as it were, reveals the structure of the external World
and gets well like a ready-made picture, a ready-made space, yes
in fact the space that is located
and in the Soul of a person for example
and in the external as if yes to physical Reality

for example, in the treatment of diseases
if we consider this approach in management
it turns out that any of our actions
i.e. any system of our Perception
works so that a person, for example, is cured

and in fact if we start to transform
action in the target already i.e. for example healing yes
then we come to an already existing aspect
what was done
at the moment of for example Perception of action

at the moment this situation develops
which is called, for example, "action"

the main thing here is to feel and see
what is it all about

the action itself as such

and how can we transform
this is action
into the management structure

it turns out that if we consider, for example,
action is what we perceive
generally speaking we act
or just fix our attention somewhere

then here is the transition to the management structure
i.e. the reverse level
from control point get action yes
i.e. how to see what it is
mechanism of action if we are in inaction as if

in this case you need to be able to
transform the action first
when we are in the middle of the action

if we look at the outside world
it turns out that at a certain point in time
a person in any case
somehow well how does management do it
being in the structure of collective action yes

i.e. he can divide himself, for example
with the Reality system
and can perceive
in the structure of some level of general action, for example

and that's when we rise
to the level of universal action
then it is clear that each particular task
for God it is an individual task
as a person
like many people
and that is what people should learn in the future
what God sets before each of them
or before for example well For example there in front of a group of people

the result is a transformation of the action
for example, in a group, as if a semantic element of the action

for example, you need to solve some complex problem
which is decided only by a group of people
if this is well just compare with that

what if some such drawing
it needs to be made more comprehensive

it turns out that the transformation itself is
like a transfer of information or something
for a group of persons
and at the same time to a specific individual
God has this type of Thinking
that this Thinking is somehow similar to that
what does vision mean for a person physical vision

and that's when we start to consider
process
from the side of external control, for example, management
then you can see the technology for example there is a cure
any diseases associated with vision problems

i.e. when we see that God corresponds, for example
at the level of physical implementation
to a person
and God has multi-level correspondences
because He does it at the same time
and Action
and as if creates Reality

it turns out that based on this
we can see
that the action there is referred somewhere to Infinity
or there it is carried away in a completely different direction and put up
from the target level
means that the goal has already been achieved
and the action is no longer needed

i.e. the primary level of action
and another location suggests that
that the goal has been achieved

those. control design

the same as God does
if it creates movement for example control
Well as if from myself to some point
it turns out that He has a realized goal

i.e. the main thing for God is to create
primary control impulse movement

if we want to transform an action, for example
to some target already further yes

i.e. further, for example, to fix
purpose of action

because here is the action itself
it is actually a kind of substance
she may not have this substance
some fixed goal

i.e. we work on action
as a source of energy actually

if we know how to transform an action
into the target structure
it turns out that we are organizing
the energy of one's own Perception

any element of Perception is already some kind of action
if it can be transformed
then we get
as if well, in fact, the Eternal source of energy
because we perceive something

and based on this, as soon as we
we make some action, let's assume , universal
then we see that the universality of action
it is always a person's information

pay attention here
if we take for example all the information of Reality
and raise the question of universality
what is universal action

then first of all you get into the structure
human actions in general human forms

and when you perceive
the form of a person acting
this is already the entire external and internal Reality
i.e. this is the whole world

why you can see the structure of your World

any other person can realize
the structure of the so-called creative management plan yes
creative knowledge is simply transmitted

i.e. in fact, we can say it like this
what if one person does something useful

then basically a different person
In general, he can master it quite easily
because he already has it in his Perception system
as a system of your Perception i.e. your action

the universality of action is such
what is in human perception
means your action
in the creative aspect of management it is natural

because if we are talking about
about some destructive systems
then the system of perception of the object is destroyed
if one option is destroyed
well or some version of information
then the other person cannot perceive it comprehensively
structure

so from the point of view of this analytics
any destructive system
has only a finite level
actions or possible developments there

so it works out
that for the creative level of management
well for example there in the treatment of diseases
you need to do it this way
so that the identified actions
had some kind of extension in the future

i.e. well For example there is a period of health there
or there is a perceived element of treatment

it needs to be considered in order for there to be action
somewhere well for example there in Infinite Value

i.e. it is possible to single out the Infinite quantity
if the stability of the action is in Infinite magnitude
is saved

i.e., for example, just the light of action is visible in Infinity
then you are definitely trying to get treatment for the disease

if for example you need to do this
necessarily in a short time
you must be able to turn into action
time

i.e. you need to record the time
then it turns out that you actually

move the control , for example , away from you from some point
bring management
to some point next

and it turns out that you are fixing it in this way
well, some action to achieve a goal
but movement means from one level to another
this is also an action that you created

and then it turns out that you begin to see
in general how do you create an action

i.e. a little analytics
different principles there, for example, of reaction or analysis of action
leads to that
what are you starting to see
your own action
and see where it comes from yes

i.e. for example you need to restore
management structure in this way
what are you doing let's say they should be there
in the usual phase of management

i.e. your action should be familiar to you
from the background and your previous actions
just a normal , familiar control state

then it turns out that you can, for example, consider

all systems there are Infinite system of action
which can lead to another level of management there

and make your system be like this
what did you remember there
previous state of control
they were simply increased [...]

i.e. just for the whole
they took one element of memory there for example
and this element was increased many times there in the future

then it turns out that you are your action
at a standardized level of management
brought forward and received Norma in its current state

i.e. Your management norm is as follows
what because you remembered
The norm of an earlier level

because you kind of cut off , i.e. didn't accept the information
related to the Infinite variant
other possible control systems
external to you, let's assume

you made the Management Standard
i.e. you didn't even identify the current target

here is a goal that exists as if by itself, yes
Every person has a number of goals
which, well, let's say, don't need to be spoken
at the time of control
and it's clear what needs to be done
and it's clear what the tasks are

and when, for example, you don't talk about the goal
then the identification of the goal flows into action, as it were
space around the target

i.e. the target is somewhere in one place
you don't consider it
it's already generally clear, there's no need to identify it

For example there is a goal Macrosalvation

and here is the action of the space around the target

it's very strict, quite precise
system of interconnections and interrelationships

i.e. the action of each neighboring element
in this space
matches exactly
well, some fairly precise harmony of the World
development of the world in fact

and it turns out that when we start
to reveal the goal itself in action
then the goal is to ensure that it does not go beyond the boundaries of action
additional control is required
in the structure of the action

i.e. to reveal the action
as a certain quantity that can be perceived , for example
by the action itself

here is one that is quite enough
may not be a normal element
that the action is perceived as some action of yours

then it turns out that you should
your actions see as an external system yes

and from the point of view of universality
as God does
For Him, every element is universal
in Perception for God too

and it turns out that if we
for example, we start to make management in this way
that we know through some universal action

then this system of knowledge is such
that you begin to see the situation as a whole
and identify a certain system
Well as if tied to the situation or something
what is the main action for you now yes For example
i.e. what is the main action

that's when you get there
into the structure of one's own personality

i.e. for you the main action

it is the structure of your own personality
in principle for God too
the main action is
there for example, the personality of a person or Himself

and it turns out that based on this
we begin already in the internal structure of the personality
to drive management out of itself
which we do n't need for example Yes
as if there is a counter-action

maybe this is by the way maybe
it doesn't necessarily mean that it's something very negative
it may not be negative at all
but there is an action that we don't need
directed, for example, in your direction

you can recognize the system this way
what are you starting to say first
like information that you don't need, for example
in the form of action
for example, to output for the structure well so let's say our information

and here the transformation element occurs
as soon as you clearly deduce
for the structure of its own information

it turns out that the action that was directed
on you
or was in your information system
is being transformed
into the structure of a kind of external Reality
abroad well actually your information
your level, well, which suits you
your level of actual action
which you recognize
precisely in the structure of the dynamics of action

i.e. not only will we say you act
you also recognize it in dynamics
these are the boundaries that are meant

and when you start to derive this structure
already as if further, i.e. to examine
then there is such a nuance here
that, for example, from the point of view of the system of collective Consciousness
there is some process that may relate

to final processes

i.e. there is an action
there is some final action there

if you take the management structure further
i.e. the action that was brought closer to you
you output it for example Yes

then you need to be very careful when outputting here
at a very great distance
i.e. the further you output
structure of action
the more accurately you should see everything that is closer
from this action

i.e. the meaning is that any dynamic value
actually at a great distance from oneself
you need to have more control around you

Well, really, the more degrees of freedom
in this value
magnitude of action
the more precisely you should know its trajectory
outside of our system, so to speak

so the conclusion should be
as a rule, well, multiple is best
i.e. first the impulse that determines the trajectory

then the reaction to the impulse
i.e. in action we can develop
some kind of model action or something model task

and then when the reaction is already determined
do you understand what happened
then just output the structure itself
and it is no different from what you did

i.e. you can say it like this
what's in action
any preceding moment
may be initial not main
you always have time to add a target action

in the system of action
a person always finds himself in safety

if this technology is worked out as it should be
as a reaction system

then it turns out by introducing a physical body
into this control space
you have that factor all the time
that you are left with only a positive level of development

and everything that is at the pre-action level can be considered
as a structure well as if a variant action
where did you do the pre-management
and this is just well just a task yes
which you tried to solve

here is the ability to enter the structure of the World in this way
that the structure of the World can be changed yes For example
in the structure there is one's own desire
leads to the fact that
Well, naturally, there through Macrosalvation
we always act

leads to the fact that we can see
what is an action element for example
which, for example, is such that it contains goals, etc.

this is your own perception
i.e. your body which perceives in some way

and then the element of action is considered
as an element well in fact, by and large, it is like this
what do you see in this action element

virtually simultaneously
the entire structure of the external world for example
the whole structure of the actions of other people there

and here you can see it very clearly
how is it arranged in general
space
this is the information space as such
or there is a space of action

because if for example Well, let 's proceed from that
what do we need to do management in general
to reveal the action

here's an example there is a simple question
where can you see the Action of God as such
from the point of view of information

in space simply

one thing can be considered there
Action for example there is the Physical Body of God
and can we consider Action as information?

and that's when we start to consider
Action in the form of information
then such an Action logically turns out to be present everywhere yes
man is also the Action of God in essence

and if we start to look closely
where in this action
there are elements of some internal relationships
elements of some kind of information
which can be considered as the predecessor
or there is a future
in general the mechanism of building a person in action

it turns out that all the elements of the action
which mean the construction of man there
are still there
on some specific rod yes
at some special value
which means that information in general
Well For example there is everything that is connected with a person
the same action information

then if we for example
we are starting to consider this information
then next to this information

there are some quite dynamic ones
dynamic areas of action
they look like some kind of wave systems or something
with the Infinite aspect of development

i.e. on the one hand Infinity
on the other hand there are some waves that are located
near some light

and now if we begin to enter this light
then we see our own Soul

completely calm
and we find ourselves as if inside a physical body

i.e. we entered the structure of Consciousness management
found themselves inside

i.e. for God
any external element of Reality
this is His inner content
i.e. the level of such Perception coincides

it turns out that we see then
its inner essence, so to speak
internal state of affairs

what is there anyway, for example, clairvoyance
here is the Spiritual vision

this is the ability to compare facts
internal state
with what happens on the physical level
i.e. coincidence and element of coincidence

and that's when we start to see
well that structure in general where it coincides
what is this platform for matching

then this is exactly the transformation of the action
aimed , for example, at viewing for a match
this is actually the organization of the structure of Reality

here for God
He doesn't have it there
some of the following information
or primary
He works all the time, well, how can I put it?
does such a job
that His next action is always new

and produces some new Reality all the time
God's point of view, for example

for example, for God
to fix some past Reality yes
this is usually a large amount of future Reality
and only through a large amount of future Reality
we can consider the Reality of the past

in human understanding

because a large number of future development systems
gives some kind of reference point in the past

while if there is a future consideration there
not some large number of events
then it is not necessary to have formed points in the past
because of the sheer amount of information, so to speak

therefore Infinite development
always fixes the Infinite Past

and considering that in the Infinite Past
yes , well, then it works out too
all event systems
that is the action of identifying similar systems

i.e. let's take some element in the past
which corresponds
let's assume there to the Infinite World of the future
and this element for example there in the management to confiscate
and transfer mechanically
by some mechanical action
there in any structure of the future

then we get that the reference point
which is considered to be in this case
creates an infinite number of future processes for example
gets into the future
i.e. there is no reference point but in the past

and when we are the reference point of the past
we are seizing
we come back to ourselves again, we did it

it turns out that the reference point is a person

Well, that's what God does too
He wanted to do the whole world at once, for example.
He's just a reference point that was in the past

transferred to the Infinite Future
and the whole world exists because He sees it and knows it yes

and based on this control structure
then it's clear what's logical in general

no disease at all

Firstly, it is no different from information. Perception is simple.

i.e. it is enough to be able to block as if not allowing
structure even there Thinking or something there some kind of reaction
that there is some problem
the problem does not occur

because in this case
the main thing is to do it technologically of course
not just there not to think about it about something there
and to do so that negative systems do not occur
in development
this is already a technology

You don't have to think about it, but it's like that
maybe there is some kind of ostrich policy
which is not effective

you need to know exactly what's going on

this is exactly the diversion
i.e. transformation of action into Norm

primary action
that you have a number of goals, including long-term ones
which you may not even know now
there it is obvious at least
in ten, twenty, thirty years
in the current tense

and the ability to translate after all
this is the level of management
into the structure of the external world
i.e. the transformation occurs precisely from the Macrogoal

when you start to control your events
you begin to see
what are your future goals
are currently influencing Reality

and it turns out that the transformation itself
this is how it is at the current time
what you need to know is what's ahead

so if we talk about Macrosalvation there
the goal is always clear

that everyone there should live forever, etc.
there is a fairly simple system there that is always recognized

then it turns out that if we have
at least one there in fact, an ideological goal
then the transformation of the control system for example
into the system of some real events
this is generally a very stable value

and here is the transformation system, it is like this
that any universal things
there which occur in events

and universal things in events
Of course a person has one
there is always the same sky yes
the same oxygen, etc.

then it turns out that there is some kind of universality
it allows you to build events in a completely stable manner
just because you own it or use it
instrument of action in relation to the future

i.e. the point of the past which is introduced into the future
it is such that you can there for information there air for example
set all future events

You can always go there how to find
some element in memories
that there is sky there are clouds there and so on
some tree earth just some event

if you start building near this
more like a static moment and action
it turns out that you build the event in this way
that the elements are as if taken from the past
are the fixers of your action
which you can do for example now

so it turns out that from God's point of view
For example , if he needs to build a future event there
It is enough for him to take
some elements from the past
put it forward and everything else will be organized
as if by itself and in His Action there are Macrodevelopments
there is Eternity

but with God it is different
that the previous segment he also has to do himself
he must create them first

then the question is
Does it even matter to him?
where to create in the future
this element there are memories yes or there in the past
for God it makes no difference

structure of the future
this is what He Himself did in management

so it turns out that God comes to Himself yes
here, acting, He comes to Himself

i.e. action is the revelation of one's own personality
for both God and man

Well, for God it's clear anyway
there is the universality and Action of His Personality

for a person to do the same
action is needed
in general, it correlated with the system of His goals, which were still distant
that's exactly how it coincided, that's how it happened often
completely appropriate, etc.

that's when the identification of a person's goals arises
i.e. the action of identifying goals

and the transformation system is like this
what can we see
that the distant goal, i.e. signals that come from the future
that means they form some current actions
some current elements of human development there

and that's when we look at the system
already there are the nearest, as it were, current actions
it turns out that we can see it quite clearly
what are the current actions of a person for example
they are connected, well, it's clear that there are signals there, among other things
there are some future events there

but they are connected at a certain level
in general, with a certain parameter

as a state of the world

i.e. a person at some point

besides the fact that he interacts with God
he still considers the manifested systems
there are some informative ones
which relate, for example, to the concept of "World" as such

and here the state of the World interacts
with human action

i.e. to understand
why did a person do something
at some point

we need to see here quite clearly, too
Well, it's pretty simple, maybe
namely the structure of the state of the World

i.e. the world should be generally speaking
completely transparent in management
i.e. it should be a completely simple value
to view like yours

and every element should be like this
what you should see events
actually well as if it were absolutely clear
you should see clearly
where is the border of this element of the World
which you are looking at

and that for you there are no shadows there
no unknown elements there
in this in this World

as soon as you come to such management, for example
it turns out that you can then see quite clearly
structure, well, actually, so to speak, of its own action
the result of which is this element of the World

i.e. own action
must be perceived first
as an element of external Reality

and that's when we start in this element
how to look for the structure of internal events

i.e. what then, ^{for example} , motivates a person there
there from the point of view of internal control systems
do this action

then it often turns out that the internal level
is that which has already happened in the future

human prognostic capabilities ^{yes}
he sees what is happening ahead
already after the fact makes a decision

and that's when we start to analyze
in principle, God should have the same thing
He knows what's coming up ahead.

then if you think about it
in God's decision making analytics
then it turns out he has to make a decision
well, including after something has already happened
and at the same time it turns out to ^{be so}

i.e. He knows what's ahead
He's like an investigative system there
must ^{from how to} introduce into the management there to work out the investigation
but still, before that He knows it

i.e. then it turns out that God makes a decision
somewhere in the Infinite level
somewhere very far away

and indeed
this is the signal that is already coming from God
it is perceived by people
and it turns out that a person already has the right to modify it

i.e. it turns out that this is how decisions are made
i.e. Infinite human action
well, by analogy with how God does it
there he can perceive this signal
and bring it here already

it is not necessarily only a human action
it can be any element of Reality
and is already being brought into a modified structure

i.e. God knows the ^{situation} ahead
but He is on the principles of complete free will

gives a person the opportunity
or any information object there
bring into full compliance
with what God accepted
or people can modify yes For example

but God still has modification somewhere
in the form of for example there is some kind of action there too
previous or more distant

and this is already the structure of a person's personality

i.e. it turns out that God is in the structure of man
some kind of control there, for example
or there is not only some action there

but it was the integration level that was introduced
where there is freedom of human decision-making and
and in general freedom of interaction with God

and it turns out that at the level of, for example, future events
the action itself can be built
according to a fairly simple principle, yes
already in management analytics
that firstly it could be a value as if
not identified even in the form of target systems

it is enough just to determine
the structure of the action as such

and when you start to see
the structure of the action as such
as I said, this is an element of the World itself
that ability to bring
your action in the structure of the World
already as if by a logical path
this is the goal

so here in today's seminar
I just kind of showed it from the outside
what is the purpose of management anyway

there is action and we have come to that
that the goal is just information

i.e. we can know our goals in advance
without analyzing their causal system

cause and effect system

i.e. at some point we can know
your goal

well, just for example, if a person there is prognostically developed
he can look to see what his future goals are

there on the one hand, well from the point of view of Macromanagement
it's clear he's there saving everyone

and from the point of view of logic
for interaction arises

there with the principle of freedom of will and action
if a person sees all his future goals
he can just count them there and look at them
as information

then it turns out
what exactly is the goal definition space
is an action
everything that happens around the target
this is a certain system of actions

but from the point of view of, for example, the freedom of God's Action
so if you think about it like that
God is absolutely free

but when He is in terms of management
considers for example his own goals
then He comes to what has already been done

after all, it turns out that from a logical point of view
for God it's the same in general, well in many ways at least
path
He goes along the already known magnitude in his Perception
just like a human being

and it turns out that if you ask the question
from the point of view of such a possibility of God
there to take and transform the whole Reality
it's kind of different there, yeah
introduce something there, improve some component, etc.
while of course retaining the primary status

i.e. God who reproduces everything
He can't destroy anything there.

it turns out that He can only do it there
change something there For example yes in Perception

but here is the element of modification
this is human education again
a person's ability to master a system
and how to continue simply in management

and it turns out that here is an element of action
i.e. targeting
as some kind of just informative value , I guess

basically he is developing here
what you start to see in this management system

that in principle the goal is a very adjustable value
i.e. it's not like it doesn't come from somewhere
but in general you can even see it there somehow
modify there, etc.
Well, the goal is kind of unknown for now , yes For example

once you come to this management process
then it is clear that the Infinite Future
manifests itself in a certain way
in the form of specific goals

i.e. the first element of identifying information
as goals
this is interaction
with a certain level of Infinite Future
in geometry it looks like a cone and a vertex
interacts with the target element

and the cone is somewhere a little further away
in control he is Infinite
i.e. as if fluctuations of Infinity are obtained

and that's when you start to recognize
goals are not just there as goals
which you kind of came up with in your head
or suddenly it appeared there in future events

namely as a fluctuation of Infinity
you can take and on one of the fluctuations as if
place the structure of Consciousness
consider further development

this fluctuation

then it turns out that you see
the structure of Infinity
element of Consciousness that is there

and then the logic is as follows
what if there is a goal
so there is Infinite development
as spaces near the target, yes

and the goal itself is a manifestation
this Infinity actually

and when you start to see it means
well , this nature, or what, the structure of the organization of the goal
then it can be influenced
from the point of view of simultaneous influence

there on your physical body

or you can influence there for example, from the point of view of treatment
on the physical body of other people to help them, etc.

i.e. the ability to identify the goal as an external system
in relation to a person
Well as if not connected

on the one hand, a person has a goal
but on the other hand, this goal can be identified
as information and
and how to see how much it interacts
to this end
how much does he need her for example Yes
is there any external influence on a person, etc.

and when you start to see this structure
as a whole
not just even as an action so dynamic
or maybe there is a concept of "static action"

i.e. if there is static light
he is constantly radiating somewhere
this is also the effect of statics

and it turns out if we, for example, do this action
something like this , well, static, so to speak

we start to withdraw
into the structure of future events management

it turns out that the identification of the goal, i.e. the action of the goal
or the action means something like this , well where does your goal act
there is a specific one

there is simply an action of purpose
and are there, for example, specific future events there?

then it turns out that the action of your goal
this is so in general, in many ways, it's even like an autonomous quantity
in management

i.e. you can watch her
you can see possible actions there
your management goal

and consider some kind of special status
well, that is, in the universal sense
what could be the target action

there a man wanted to go for a ride in a car
so he's driving a car, that's his goal, yes

but if you think about the Universe as a whole
how is this goal of his connected, as it were
with all systems in the entire Universe

then it can be revealed completely
detailed, such as nuances
what influences a person in general yes

i.e. this is what he would like to avoid
for example, get rid of it there yes
Well, in terms of correcting the situation there

there is no talk there about the impact on people, etc.
but just in general the management
i.e. introduce an action that would help him
accurately determine the situation
in general, so to speak, in management

and it turns out that if we, for example , begin to analyze
external action well some analytics
abstract some such diagnostics of action
and the target moment

then we can connect
that in these systems it is as if manifested
as an action of an external system
i.e. how does this external system behave?
why exactly like this and not somehow differently yes

what are the root causes
there for example there is some kind of external influence
or there is external control

and that's when you start to enter
into this system of root causes
then in principle this is a fairly strong level
including correction of the situation

i.e. in each subsequent action
you reveal
Well, actually the following root cause

and it turns out that your action
on the one hand it organizes
for example, some next development option

on the other hand you see
what happens at each level of action

you see that at each level you can
calmly, for example, to do
Well For example there is a counter action if you don't like something

and it turns out that this is precisely a dynamic system
it is very important in terms of even protecting the management there

what the outer side perceives
if you are there your some action is trying to resist
it's still up to a certain limit
i.e. your management status is maintained anyway

i.e. you can perform management
well the one you need
it's enough just
all the external there as if a projection of action
some negative
bring out the structure of your action
well, which again may be undefined

even on purpose
just an action
action as such

and by the way the biggest
that's exactly ^{it is} the management structure related to that?
what do we have in the future
for example, a good level of management , i.e. stable
if your actions are not indicated

then the outer side ^{is like something} that counteracts
for example, falls into the structure of undesignated actions
and enters the structure of the Infinite Phase
Well ^{as if} a translation of some negative events
to where they practically do not pose any problems for you

because there you can go into the structure of the past
and ^{how to} mechanically deduce
the structure of resistance in the past
i.e. it doesn't affect your interests

i.e. a certain systemic level
entrance to the future
this is a translation of problems into the past

and there you need to find it in the past
exactly the same indefinite magnitude of action

if you take action there in the past
which means a specific goal there
fixed system of actions
then this cannot be a reference point
for translations

you can translate into the past
only for action
but not exactly an event, ^{as if} it were information

to the event that is manifested
in the form of some descriptive moments
this can no longer be
the structure of sustainability is obtained for the development of the future

i.e. all past systems of development
if they are transformed
into a universal, ^{multi} -component system
then accordingly the fastest

the future is developing

even logically it's clear
what if the past consists
from more universal modules, as if systems
it means the future is bigger and developing faster

i.e. more knowledge is obtained in the past
due to the universality of actions

and thus if we consider
development structure
that's exactly how the interaction structure is
there is the past for example from the point of view of action
future

then there is such an element
that in action, integration actually occurs
often past and future tense

because here we see it quite clearly
that the higher the speed of action
the more naturally the events are compressed

i.e. if you look at it a second ago
some event
and there a million years ahead
then it turns out that
what a million years in advance well prevails
and it turns out that we have more action of the future

than a second there past time

but in essence we are taking the past tense
as a reference point

i.e. a second can accommodate
according to the support system there are a million years, for example, there
or any, well, basically any amount
because it is already a fixed value

and it turns out that from here
here is the transformation of the action there of this type
that we can deduce any Macro action
into some kind of final structure there For example
there is a second value there
take an element from the past

leads to the fact that during analysis

internal analytics of action

does it work there for example

Soul

The spirit of man

there is an integration point

For example there is a human physical body

where the action is already determined by the feedback system

i.e. the physical body is already

and action in relation to

and Souls

and the Spirit

and Consciousness

then here is precisely the ability to translate

transform

Macro action there in the microsystem

or vice versa microsystem into Macroaction

allows you to set any goals

to solve them

because in such a list of controls, as it were there

single impulse

Infinite impulse system

You can always enter the answer

i.e. you can simply enter the answer with an action

but in principle it is not even necessary to formulate it

and you get the control you need

but you practically don't spend any resources on it

you just need to develop the action

consider the action

so you saw it, discovered it, examined it, recorded it

understood that this is called "action" in this World

and you got the solution result

and the result may be useful in this case

it is immediately obvious that it can be absolutely stable

from the first even control element

so in this control system

try to develop that action

which leads to the result
straightaway

those. actually recognize the action
by recognizing the action
you already have target management
and immediately expressed in the system of Eternal development

local action has the structure of Eternal development

so try to practice
if possible even for very distant events

and you will see that the stability of distant events
it is also possible to provide this control
through action transformation

This is where I end today's seminar.

Thank you very much for your attention
