GRIGORY GRABOVOY
The Teaching about God
Transformation of Thinking
into direct control of Reality
21.01.2005

Hello
the topic of my seminar today
this is my Teaching about God
Transformation of Thinking
into direct control of Reality

in this topic i show the technology
when God, for example, creates Reality through Thinking
then a person can follow suit
Make Thinking Reality

i.e. in this case it is necessary to monitor very clearly
it is precisely the structure of Divine Action
in this management you have to constantly try
watch how God does it

and when you, for example, technologically, so to speak Yes
from level to level
from one stage to another
you can see exactly the Action of God in dynamics
then you understand
the internal process of interaction itself
namely the personalities of man and God

i.e. how God interacts
with all the phenomena of Reality
why does Reality acquire certain properties

i.e. for example , why is it needed there
well, the so-called let's assume there
some kind of unexplored as if yes to management
level of Reality

i.e. when there is a principle of some negativity
in Reality
then why is this done
it is precisely from this point of view after all
further control from God

i.e. God created only positive levels of Reality
and therefore if Thinking is distorted

a certain level of negativity arises

so it turns out that in this management
It is important to track
namely the purity […] of God
and when for example
it is the pure Thought of God
you start doing like management
how to control yes
i.e. you take as a subject of management
it is precisely the pure Thought of God

Here we must understand very clearly
that the instrument of control is the Thought of God

then you start to see
what interaction
for example, the whole essence of man
and God
it turns out in this case it is a level
still a constant understanding of God
with the whole essence of man

because it is the simplest on a logical level
management level
is essentially so close to God
that his management is carried out
just as God's government is done
and so it is with him

and it turns out that at this level
the very Thinking of man
is considered as an act of Divine Action
i.e. when we consider
for example, human thought as a level
where part of the action is Divine Action
and part of the action, for example, the principle of human free will

and this is where we begin to see
what is the so-called negative level there
or there is the one that for example I wouldn't like yes
implement for management
i.e. well, the one who wastes time
and we, for example, wouldn't need to deal with it

but let's assume we can do it or we can't do it
i.e. it may not be entirely negative
but as if the one that is not necessary for management
but we kind of reason

should this be managed or not

then it turns out that this is where it arises
third level of Perception
a person always has a choice, as it were, of an internal link yes
i.e. a person in his essence always begins to think
over the internal, as it were, subject of being
internal subject of management

i.e. why does his personal initiative exist at all?
there for example, it is full initiative at some level of management
i.e. he sees in a single act of management
their full initiative

i.e. for example the World exists
here too a person can see his personal line
and can see that he, for example, directly acts like this
how he wants to act

Well for example from God's point of view
any Reality can be made manageable
and make it so that this is Reality coming from God

i.e. if a person takes this position
then any Reality is Reality from God
i.e. he can make the control in this way
that any of his actions are correct and he doesn't make mistakes means

it turns out that based on this
in such a status of a person
there is no option to pause for example
its precisely creative development
i.e. when it is clearly in position
coming from the work of God
it is practically unavailable
for some kind of problematic external controls

it turns out that this is exactly the full connection
in fact, the Thinking of man and the Thinking of God
on the general task of Macrosalvation
This is naturally the first level of management

and the second level is level
still research and implementation of private tasks
here at the current moment in time

after all, a person has
a lot for example there are no strategic tasks there

There are many management systems
which are necessary for example
in order to implement this strategic line
support all the time yes

i.e. when a person does management
he still reacts to it
how can we get for example
further management

i.e. when exactly is the distant strategic task
is the goal of man
maybe not all people at once
this goal is clearly differentiated
but at least Eternal life is a simple enough goal
and for example if this goal is tracked
as a kind of beacon in management
then the Thinking of man is superimposed on the Thinking of God
as if from the inside

For example, there is the sphere of Thinking
and if it is from the inside
your Thinking
extend to the Thought of God
then it turns out that this is exactly Eternal Life
achievable by a specific person
because he is practically in Thinking
merged with the level of God

i.e. God's Thinking and His Thinking
it's the same thing in terms of information

i.e. it turns out that if there is at least one segment of the same type
then the whole system becomes uniform
man becomes Eternal

This means that through Thinking we can completely
get a comparable level in management

i.e. it is enough
for example the Perception system
the human thinking system
i.e. Perception is adjusted this way
to control through Consciousness
with precisely the level of God's Action
this is how the management was
that there would be a direct connection
between man and God through Thinking

at the same time the connection is practically which
concerns the physical level of a person

and therefore the following status arises
such a status as Thinking with the physical body

and when we start to think
not the way there let's assume reactions
to an external object and information
and we begin to think, to see
how does Thinking with the physical body happen

i.e. the physical body thinks
some processes are taking place at the same time
inside the physical body

that's the whole difference between Thinking as such, yes
in this case, the following question should be considered
and for example Thinking with the whole physical body

in this case i mean "everyone"
because for God
Thinking and Reality are one and the same
therefore He has a process of Thinking
inextricably linked
with the entire physical body of a person
i.e. His God

it turns out that when we
we learn to recognize this process
then all control systems
for example, if we consider the question
why is there this deep faith in Christianity
precisely at the resurrection of Jesus Christ

because it was enough
Jesus's thoughts on the Resurrection
naturally he is alive

and it turns out that at the level of Thinking
the controls are recognized naturally yes
i.e. each person understands the Thinking of another
at least a mature thought is already a Reality
at God's

and since Jesus had it
so naturally he was resurrected
what questions can there be further anyway ?

and it turns out that this faith is based on
besides the fact that the fact itself certainly happened then
It is clear that this faith itself
which arises
directly along the entire perimeter of control
this is still the original faith
from the primary Thinking

but when Jesus did the management
he showed how people should do it themselves, right?

i.e. it turns out that he pawned
it is precisely the structure of human thinking
a certain grain
this is the Eternal development of Eternal life

so when a person for example he's doing it there
resurrection technologies
here at the current time
so he just continues
this is the direction of Eternal development
and that's all

i.e. one case of the resurrection of Jesus Christ was enough
to constantly be engaged in the resurrection of people
Well, purely ideologically or, let's say, from a logical point of view
management

and when we consider, for example,
already some specific cases
there are further cases of resurrection
it turns out that the resurrected man himself

there is a full level of control
from the initial Thought of God when life is Eternal
to the level of his personal Perception when he is already alive yes

i.e. why I have this particular system
full recovery of information
not necessarily just resurrection
and in general, all information is recoverable
I looked at it here
that this is precisely the root of control
when the Thinking of God and man merges

because for God any object is restoreable
He is the Creator Himself
for Him there is no concept of "destruction" "destruction"
He can perceive any object as a whole.
and he becomes whole

so it turns out that based on this
It is precisely in a subject-based, systemic way that we can say this
it is necessary to do it
full recovery technologies
it is necessary for Thinking to be in control
because in this case it merges with the Thought of God

and when do you start
further consider the social process
why is there someone doing something and someone not
someone for example there it interferes, etc.

then a very simple reason can be identified here
what usually hinders those
who, on the contrary, is perhaps very confident in that
that a person can really be resurrected
and is afraid of something
maybe he is this person
Well he is involved in something there and is afraid of some truth there

but the thing is that the resurrected man
he does not prosecute that
who is he there let's assume liquidated
he physically eliminated it

the thing is that there is a problem here
all the same the status of creation
if we suppose someone is afraid
that the resurrected one is there for example he will tell

some criminal secret
in fact, in the judicial order the legal proceedings themselves
is brought to the level of a generally neutral system

the man is alive again
then it turns out well It's kind of a problem of course
like causing some kind of injury, yes
but the person is still alive

and it turns out that in court
such a system means it is not like that
what if the resurrected one speaks there
that someone killed him and then it can't be presented
murder charge
because he's already alive anyway

and it turns out that based on this
this is this system
Well , the main resistance comes from those people
who is afraid of this moment of control

and if, for example , you explain that the system is like this
that in fact it is simply a question
about the transfer of knowledge
and people then simply logically
instantly stop just killing
because for them there is no point in this case anymore

and it turns out that we still come
to the next structure yes here are the Thoughts of God
why is there a level of some destruction

because for God
the question of Infinity is always solved
in any case, everyone will be alive
i.e. for Him there is no object
it is precisely the current destruction in management
i.e. when some destruction occurs
for example, biological death occurs, etc.

and if you ask yourself the question
why are they being considered exactly
external process as system yes
i.e. generally speaking, it is unjustified
an inappropriate process such as biological death
is considered by people as a systemic process

that's why it's not considered
namely Eternal life as a systemic process

i.e. it is impossible to say that there are no Eternal Living
because many people live permanently
no evidence yes so let's say that someone
that everyone's life is necessarily interrupted

but people basically just observe the picture
that's exactly what happens biological death
and here, just from the point of view of God's logic
He doesn't attach any importance to this phenomenon at all.
because in the future all people are alive anyway

therefore these are the management processes
related to how to overcome this system of destruction
a system of, for example, some finite quantities
there let's assume in a person's life

if you think about it
then what is the meaning of human life
if he has an interruption of life

i.e. all the same, a person has naturalness
Divinity is the meaning of Eternal development

and when we consider
this very control system
it turns out that to a greater extent
a person must in order to learn
observe some pronounced phenomena

For example there how to fix the interval yes
i.e. Human perception is structured this way
what does it record
there for example, the interval of a person's life
time interval, etc.

and so if a person learns to perceive
immediately Infinite interval of any phenomenon
then there is simply no need for death

i.e. it turns out that he can perceive
the whole phenomenon in Infinite magnitude
i.e. another principle of Thinking yes
The Thinking of God

and when, for example, we proceed from that
How then to approach this technologically
how to carry out such control

then it turns out that of course it is required
solve specific social systems
so there are specific control systems there let's assume
it is precisely in social moments, so to speak, of management
when we must definitely decide
after all, the specific needs of the people are theirs
they still have some real systems
which generally occur at the everyday level
there in the Spiritual, etc.

that's why else i am
I have been the president of Russia since 2008
because it turns out that management needs to be done there
connected precisely with solving the urgent needs of people

so it turns out that here, as it were, any manager
which, for example, does the management
Well, let's say on behalf of ourselves
he is still forced to decide at the root
the affairs of any person

i.e. the manager cannot be isolated
there from the affairs of, for example , some boy living in the tundra
and he must still solve the issues of his Eternal development

i.e. it turns out that we will still be forced
to solve the systems of social management

so it turns out that if we, for example,
at the same time, the fact that I have been the President of Russia since 2008 is a forecast
i.e. with any combination of events, this happens in any case

based on this, for example,
Well as if the absolute structure of the future
consider
as for example a structure that is generally perfect
i.e. God sees the structure of the future
and based on this he makes his management

i.e. if each person there looks at himself

what's going on with him anyway yeah

then we can structure the Real life
i.e. when in any case the person is alive
i.e. take your eternal life and look at it
that this is happening anyway
take bring to the level of absolute construction
control

i.e. there are absolute things that are as if in themselves
but this is public opinion, a certain historical process, yes
system of collective consciousness

to think like God
just need external control
bring to synchronization

i.e. the amplitude is like an oscillation yes
this external environment
and it is located here, I show it with my hand
right here, next to the person
somewhere at chin level
phase of collective Consciousness for Eternal life

as soon as the amplitude resonance
just imagine there is a certain level
Well like some kind of layer in the water, yes
and here he hesitates

then it turns out that based on this
if we are somewhere under water or above water
we begin to enter into resonance with our palms
we still feel it

i.e. try hard
at the level of Perception with the whole body
learn to enter into resonance
with the Infinite Development of the World
the whole world in general
then you will give life to all people yes
in Eternal Life
and you yourself live forever

i.e. try to think the way God thinks
He somewhere introduces the structure of Eternity

in the development of people

and so that people's education
it was systemic and synchronous
it turns out that it is necessary to do the management in this way here
to solve all control systems at every level
i.e. take responsibility yes
for any control system
Anyway

and then make the management already in Infinite development
for example, from the point of view of development technologies
if we consider how I spread the Teaching
now I'm already in February
there will be a founding congress of the DRUGG party
i.e. I go to the political system of governance

i.e. I show that well, it's a party of volunteers
disseminating the Teachings of Grigori Grabovoi
abbreviated as DRUGG
i.e. it turns out
there are two letters "G" at the end

and it turns out that when the control goes
precisely at a political level
then here we already have the following character
that when something is introduced into the political system
there for example the task of Eternal development
well, by analogy, in principle
some Teaching is supposedly a party movement
and it looks pretty good in society yes

i.e. society begins to support
at the systemic state level
this direction
and it turns out that yes, the national idea is about Eternal development
becomes the national idea of Russia
we are the leaders right away, we provide technologies
to other countries of the world

i.e. it turns out that we can do it
it is precisely to consider this system
precisely as a political system
then it turns out that there are some other third opinions
they don't fit together here at all

Well let's assume there there is an opinion about the Teaching
Well, it's clear that the Teaching there is large, multi-level, etc.

but at least it's clear that it's not a sect anymore
this is a political movement
it's clear that this is not a normal formation there
it is still a national idea, etc.

and as if at the ideological level
namely the creation of all systems for Eternal development
I distribute in principle in this case
even social processes are obtained yes
here, entering just well as if on a personal level, personal initiative
your own management for example

i.e. by analogy, in general, any person
can decide for himself this management in this way
Well, this is how I show it socially, for example.

i.e. not necessarily presupposed for any person
this is something concrete
it is enough for him to express synchronization often
precisely with the structure of Eternal development
and then it turns out that at the level of God and man
the same thinking goes

i.e. man thinks like God
he perceives the Thought of God with his whole body
All
at this moment his Thinking
in general, he himself is no different
from the Thinking of God within the framework of precisely Eternal development
those. from God's tasks

at the same time, it becomes completely individual
that's how it actually merges yes
with God's task
that's when he acquires
it acquires complete individuality
[...] this person
and by the way we see it by the sign
the first sign of Eternal Life

i.e. this is precisely Eternal Life
creates a very autonomous system around a person
because Eternal development
this is an infinite number of events

and it turns out that then a person becomes
completely individual

Eternal number of events
creates the possibility or there is Infinite life
creates the opportunity to solve all problems
i.e. to reveal the complete structure of development

and each person is uniquely created by God
therefore it becomes unique yes
even in global information

i.e. it cannot be said there that he does something general there
or he is there there for example, it is not recognized
or is not visible in the overall development system
each one does it completely individually
namely the structure of general development

By the way, this is when Jesus was resurrected
all these saw
he had other tasks
The eternally living has completely different tasks
in general, fundamentally different tasks

there a system arises, it is similar, but it is generally similar
it means just something similar to that
what does God mean for example in Infinite Development
similar to the understanding of a person in that
that Infinite development is necessarily achievable
and for him for this person

and when we see all these development systems
for example, from the point of view of the management structure
this is how we want to know , for example, let 's say technologically
management level

it is clear that there is a kind of level of connection here , yes
here's how let's say there are social personal systems
we connect levels

and it turns out that well Let's suppose if you think about it
why, for example, did God create man there?
that he has two hands there Yes for example two
paired organs
why does the interaction system even exist
similar systems

Well let's assume we give the property there to the Thought of God
there for example, the left hand
Thinking of a person on the right
and we begin to analyze
what's going on between them
but they act synchronously, although often differently, yes
some actions are performed

i.e. we can somehow at the model level
explore management problems
and try to understand
if we see the Ray of God
i.e. the movement of God towards man
i.e. the manifested movement of God
i.e. we see specifically His participation, His presence
and what is even permissible to do
management simulation yes

Well, it's clear that God gave the right to free thinking
i.e. we can model
everything that corresponds to Eternal development

and in church when a person
the first stream from the first prayer receives
he first receives it for some organ for some system
i.e. the primary level of docking is for example with the human hand yes
where the sign of the cross is performed, for example, etc.

and when you make the management coming from a person
that is precisely the connection directly with God, yes
let's say in a continuous flow of control
when let's assume the same as in prayer when a person prays
he makes full contact with God
at a certain level of the physical body

and if it is in prayer
through long prayers there
and at the same time you can see
also through prayer somewhere is located
then in the technology of management according to my Teaching
such a mechanism is of course permissible for the sake of Salvation
You can use any prayers as long as they are constructive

this is acceptable
you just need to see it technologically
how does management as such come to you
i.e. how to take control of system control

this particular management task

because in any case everyone will be resurrected
then we need to do something completely systemic

in any case, everything is creative
it means it will have infinite development
therefore the system level for example there is Eternal Life yes
everyone should live forever anyway

therefore this is also a system level
we can't use random variables there
there one-time or creativity-dependent
some one person for example Yes

therefore it turns out that based on the task of systemic development
and since everything will come true anyway
it is the Eternal life of man that will be realized
where all the resurrected will also be

it turns out that we must very clearly examine
the subject is precisely in the depths and in the very
i.e. we can't miss anything
it is precisely in the depth of knowledge, so to speak

here we still need to [...] learn
in terms of fundamental or deep truths

i.e. we cannot help but consider it there
the philosophical side or the practical side
we are forced to consider the subject on the merits of management
in this case

and so when we look at it like this
well, although in some cases it may not be necessary to do this
but precisely from the point of view of Eternal development
we will have to do this

I'm saying that in connection with this we will have to enter
precisely in deep knowledge
The thinking of man and God at the same time
because through Thinking
you can very easily know Reality
there I thought of some idea
For example there I can drink water, I may not drink it

i.e. the idea is simple

I can just write it down there formally, yes
by formulas or there to consider from all sides
and take and see
and where then is the Thought of God
i.e. I have thought through and can do what I want with this Thinking

and when we assume as a management tool
we have a structure of Thinking
then naturally we have a fairly convincing level
to transfer knowledge

i.e. for the primary level
there is some primary thought
creative of course
and it begins to be realized
God has the creation of Reality there and Reality was realized

and at the same time we must understand very clearly
where then is the human level of God
Here

i.e. when He is a man
begins to consider positions
as if the next development of its own

the concept of "development" for God is as a rule
simply complicity in a person's action
because He already knows everything
and is already practically infinitely developed

it turns out to be just an element of complicity
is an element of empathy there
interaction element
for the direction of humanity there
precisely to the Eternal development
i.e. this is it
here we need to understand
that He is looking for structures of participation
on human understanding

here is the Thought of God and some silver path there
which was originally determined by Him
in the form of a series of thought events
all people or one person
and a person must see that God is, in principle, simple
as if it connects with a person on a human level

at the same time, He is no different from a human being
it cannot be said that He is some kind of so to speak creature there
which is completely separate or some level
which let's say is some completely unfamiliar one
it's the same person but he is just God

and it turns out that this is the level of the docking
it's a human level anyway

Well let's say if people haven't seen each other for a long time
they will then take some time to adapt
Well, some preliminary conversations begin, etc.

God created the Infinite development of man
how can you say how long they haven't seen each other
from the primary point of creation

quite a long time yes
any time interval is long enough

and it turns out that this is the level of interaction
God and man
although God of course helps all people
and in fact controls it completely, of course
the whole Reality
but in human understanding
this is a huge time interval

and from the primary level of creation
if you tell a person logically
that's where God created people for example, in minus Infinity
In general, Infinite time ago

then it turns out
when meeting how should a person react
as a person, well at least one
I haven't seen you for quite some time

and so then it turns out
what exactly is interaction
Well, the initial meeting does create a number of
a number of tasks in general
i.e. then a person has

Here you have to be very careful

because it arises here precisely at the meeting
in general, a person's personal position

i.e. from the level in general as interaction
there is something I can help with
what to offer yes For example there to God
from the point of view of interaction there in social systems
from the point of view of His tasks

a person begins to understand more deeply and more accurately
primary tasks of development of humanity in general
and by the way he immediately begins to see
Eternal development in the future
i.e. predictive properties begin to emerge in people, etc.

and then we begin to see
that's when he starts to sort of predictively or intuitively
or at least on the level of ideology
manage Reality
this distance is getting closer

i.e. man comes closer to God
and the process of interaction begins
at the ordinary level, so to speak, of people
who have already met yes
and have already discussed it in advance
some elements of mutual action

and then, in general, the spread begins
on a wide variety of systems
after all, people are completely free
and here there is no concept that it is necessary to act
just for example let's assume in a religious direction
or only in scientific
or only in political

here in this case we are talking about that
that a person being somewhere
well it doesn't matter if he is there at all outside of politics, outside of religion, etc.
he's just somewhere there let's say in the village
is conducting some kind of activity there

although on the other hand he communicates anyway
in a task with God
at a certain level

but for example he does it inactively
but he must still live forever

i.e. a problem arises
knowledgeable people
and God's task
convey information to any person

and then here it is
this is already a subject level
where is the Thinking of God and man
they are not different at all

i.e. here you can see
very clear configuration
right on the layer there is literally soil of the Earth
material soil
there are such control sections
You can take a look at this
that there is practically no difference there

For example Well , let 's say this is where I was born
This is Bogara village in Kazakhstan
i.e. it turns out that I once observed this as a child
such elements literally even soils
there is generally a different principle even for plant growth, etc.
i.e. they become practically the same there
as if they possess the properties of indestructibility

i.e. there is precisely the indestructibility of plants
manifested in additional glow

and you can observe this, you can even watch it
on their own there for example, summer cottages
or even just within the city limits
somewhere to work with a plant
once you find such levels of docking
God and man
at the level of a specific value
you see that this plant grows as if outside the laws
maybe there is a normal growth of a biological plant there
as for the sake of appearance, let's say
i.e. where the soil is dried out, etc.

and then you can see
what for then did God create the Earth anyway
Reality in general

for a person
to create points of mutual control
and all development means humanity
this is still the cultivation of that environment
where He Himself is located, for example, Earth and outer space
so that these systems would also be Eternal

Well, a simple example of what is there
Well let's assume there are many different rumors
that some kind of comet could exist

for example, the outer large one that can damage the Earth

but if the earth is Eternal
then nothing can harm the Earth

and as soon as we start to explore
here is the process of distribution yes
the same type of Thinking of God and man
on the objects of Reality
these objects begin to possess the properties of Eternity
total

then if you kind of touch
with these items
then you get generally speaking enough
in general, an intensive management system
i.e. even related to what you receive
certain well like a charge of Eternity or something
some cheerfulness of Eternity
where do you have additional health resources

and if you surround yourself there
such items in household use
then it turns out that you are constantly
you have, as it were, an external resource
additional health improvement as if in management yes
towards Eternity

and based on this we can consider here
for example where it intersects
here is the Thinking of God and man in that
so that objects have the factor of Eternal development
as if these some there were radiating let's say some kind of fluids there
in simple terms it looks like a certain light
but it is the light of Eternity

and if a person learns to differentiate it
it turns out that here it will be revealed quite clearly
the control task is as follows

what if for example we have some action yes
took some action
for us it is manifested, which means it is so

i.e. this is precisely a personal management position
Divine level
God is doing something
He's doing the right thing.

This means that he doesn't lose speed accordingly.
there seems to be a wrong action
some additional analysis there
just moves in Infinite development
and that's all

and when we begin to see it for ourselves
then the world becomes balanced
i.e. more harmonious or generally harmonious

we understand that we did the right thing
and any of our actions are naturally creative
Well, it is aimed precisely at creation
creative type so let's say yes
precisely in the general understanding

this action becomes systemic
and we begin to see that the light coming from us
i.e. the light of creation when we always act correctly
it always catches up with us, in general
all phenomena of Reality
from the point of view of positive i.e. Eternal development

and now make such control
those. synchronized
your Thinking with the Thinking of God
just choose in any Reality
any for example correct yes Eternal path yes
Eternal Glow
and go like this, on a straight, correct road
there are many roads
but it is better to follow the path of Eternal development

and this is how the path should be like this
that you somehow manage to constantly put yourself ahead
this pillar is some kind of fountain of control light
that you are Eternal

i.e. you come
to the next management
to the next Thinking
even more Eternal level or something
an even more saturated level of Eternity

i.e. do this control
literally it looks technologically
just like throwing light in front of you
namely the Eternal Light
you generate it yourself and you enter it yourself

and naturally then your tasks are solved more actively
and often in this case they always decide

so that's how the goal is
It is precisely in the solution of the management problem that there should always be
do this management
I will work with you

there is another such addition here
the thing is that synchronization with God's Thinking
this is a very powerful level of healing

i.e. try to get out
into the structure of health improvement too
i.e. think about yourself at this moment
what is mainly who is involved in Salvation
often rarely think
although it is still advisable to think about yourself
periodically too

so that's why try to synchronize
at the level of healing, and not just ordinary healing
namely from the point of view of Eternal development

i.e. it is necessary to provide for
so that the most acute event angles
still, if possible, they didn't touch you, yes
from the point of view there for example, some business activity there, etc.
at least so that health would be like that

that you are practically healthy

and it is better to be at a healthy level
this is how to build management
to constantly increase resources
namely Eternal development

then you should provide for yes
each next level of management
from the point of view of complete controllability

God's point of view, for example
every next moment
is still more manageable
with precisely linear , i.e., temporal development

and that is why this is precisely the task
that this level of well light of some kind yes let's say some action
This is still a more manageable level

here in the Thought of God we need to consider the process
what for an ordinary person
there are some high-speed systems of Thinking there
or there are excretory systems
some kind of there suppose light-optical systems
precisely in the control area
this is still, well, often a very complex concept in general
because you need to know
and in this I often try to at least show
by hand
where does this happen

I'm showing the area with my hand
which specifically means defined
Here

so when you work
try to work within the management structure
as far as possible at the nearest level of Thinking
like, right next to you

you can work in Infinite Remote Thinking
but for this you will need time
this can be done too
God's thinking is limitless
you can work on some remote systems for example

in this case there is only a direction
can be shown
where the system of Thinking develops yes
and she leaves, let's say there for many meters or into Infinity
and the Infinite quantity has only a direction

i.e. if, for example , we want
Well let's say we show all the controls with our hand
i.e. a person just needs to look
from the hand's point of view
where is it happening
try just with some symbols and signs
or with a hand movement
show the whole management system according to Eternal development

then you will need to show it correctly i.e.
i.e. some actions
for example, so that action means development
so that the action means suppose control

then it turns out it's possible there without words
simply by showing with hand signs, etc.

show and teach the system of Eternal development

but then it turns out
if there are two actions, you can teach them with words
you can teach for example there with a wave of the hand
then you can teach without any information at all yes
as if without any action at all

because between two intermediate actions
there is a huge amount of information
well, which is not conditioned by anything, yes

i.e. I can say purely logically
if I say the word and show my hand yes at the same time
the same as if I duplicate the control
it turns out that the perceiving person
which one is there Well for example , his TV sound is turned off
for a while
he can look at the hand

and if we suppose you, for example, made a control
let's say at the level of signs there were some texts left
then even one sign and the second are already different levels

between the first sign and the second
there are a huge number of events
in the World
even physically write in a second
a huge number of events have already happened

there are some systems, so external
which carry information
absolutely unconditional level of information transfer

i.e., because on the basis of equality
between one phrase
and another
there is a certain level of interaction
information transfer

and between for example the level of information
Well like any other
there is also a similar system of interaction

i.e. it turns out that it is possible, for example, to make control Infinite
by means of sound forms there by means of addition there to the sound
additions for example to Thinking yes

and here it turns out
what if we have exactly this exit

then it turns out that you can find the area
through which information can be transmitted
practically nothing well as if not doing
i.e. without adding anything there and without taking anything away from there

and from this point of view the Thinking of God
has this ability
i.e. God being in one status
and doing something like one thing
controls the entire Infinite System

therefore He must have
transmissions some kind of sound material
or as we can say for example
what can be added for example control
by means of some sound forms
adding to sounds by interrupting sounds there, etc.

and at the same time we can create
let's assume the soundtrack is very different

to convey something to a person yes
any control to do

and then it turns out that if we consider
all control systems are as if in a compartment yes
it turns out that we can be very effective
consider
what's going on anyway
between adjacent controls

Well, let's assume there is some sound
that means there is some tone, timbre, shades of information
what's going on between them

i.e., to put it simply, I want to sort through this information
exactly in the enumeration that I just gave
have you considered where well as if unnoticed yes
or so to say, non-differentiable
from the point of view of Perception
there is an action of God
i.e. how He transmits knowledge at this moment

and when you start to see it
you see that after all human thinking
it is also arranged in this way
that a person perceives a thought, for example , his own
and at the same time he understands
that exists near it
some Infinite space purely hypothetically
so let's say he perceives it logically
but as a hypothesis in this case it is
that exist
what specific spaces
this is a hypothesis
it is clear that they exist

and when we begin to see this Perception
then we see that it is precisely this part
which is not announced but informative
this part is perceived by the whole body
i.e. this is a natural state of the human body
physical body

so it turns out that it is an undeclared, sort of informational system
this is the level of action of the human physical body

i.e. the physical body of a person

is initially located
in the Infinite level of information actually yes
and at a level that has no obstacles
for the development of distribution
and which comes directly from God

i.e. it is clear why God created man
here you can see by the way the road is directly visible
those. structure visible
that God really created man

here you can observe and see it
everyone can do it themselves

and when, for example, we start further
for example, develop management
Well, let's say it this way now in Christianity
Christianity is built on faith after all
precisely in the fact of the resurrection of Jesus Christ
and here it turns out
that it is precisely the technologies of management for resurrection
which, according to my Teaching on the Resurrection
conducted by students
they actually contribute
precisely to the real further development there
their fundamental canonical Christianity
where the structures are already shown technological yes

because of course it is possible simply on the level of faith and prayers
continue management
but when there is a possibility of destroying civilization
from a nuclear explosion for example

then naturally any technologies of people
including Christian resurrection technologies
naturally they should be implemented yes

it turns out that this is exactly it
precisely in social terms
development of resurrection technologies
this is actually the task that determines
the influx of people, specifically Christians
although in fact other religions too
because it shows
what exactly is the fundamental level of management
fundamental religion
which is concerned precisely with the task at hand

human life
this is the correct action of humanity in general

and it turns out that when we show management as such
from the point of view of fundamentalism and knowledge of action there
integration and unification is underway
there is no difference what denomination a person belongs to
or does he even belong to any confession, etc.

we see that a person has
that's exactly the creative path
when his personal tasks when he sees and believes
that he can control
through personal practice
he can believe in essence faster yes

and often it is necessary to do the management first
i.e. make sure and then
a person develops a certain level of confidence
in my knowledge yes
in faith, so to speak, in one's knowledge, already in personal knowledge

because it is important for a person
convey the possibility of action
precisely so that there is personal knowledge

Well, here I just gave an example with exactly that
that resurrection technologies are development
namely orthodox fundamental Christianity

then you can see it in every person
Let's assume our own line there yes development
where can he see
that for him, from the point of view of this analogy
it's just a collective process, yes

it means Christianity as a religion
and personal process

after all, it turns out that for believers they are often inseparable
personal development processes
processes of collective faith
and he perceives the processes of the past in the form of a social environment
what actually happens in life
and he perceives these processes as processes of the future

why are people concerned

try to take part
in politics in political activity

because they still want to have it
controlled future
so that it would be controlled by them, yes

Well, right now, things are just fine in modern civilization
there is direct suffrage

and it turns out that based on the management of such
we see that there is integration of religious action there
development of religious action yes
for example, so that there would be a greater influx to Orthodox Christianity
we must definitely work on resurrection technologies

because i said further contributes
namely the increase of believers in other religions too
because any fundamental systems evolve
in management

i.e. people begin to understand
what God was conveying to them
Well, let it be through other religions
not necessarily only Christianity

then they begin to understand
how did he convey it at all
how did he even think
so that the idea would be conveyed to them and to people

it turns out that here we see
your personal level
when a person finds this in himself
considering for example fundamental positions
those people who, let's say, are engaged in
namely Eternal development
i.e. they are engaged in fundamental studies

not only can it be religious
but there personally
elements of the study of God

and it turns out that those who, let's say, don't ask the question like that
they for example Well as if they become separated
from the level of the actual tasks of civilization
i.e. it is clear that the real tasks of civilization

this is to take for example using technologies
in order to save there
Well, if it is possible to diagnose, for example
I proved that it is possible to diagnose equipment there
I proved it through protocol
so this can be used to save people yes

means it is possible to make management for healing
many of my students are making very powerful results
there for healing tissue restoration
so it can be used , etc.

i.e. any positive real results there
aimed at people's lives and their development
their personal there Perception
it's still impossible to change it in any other way
there is a fact and that's it , the fact can no longer be changed

and it turns out that based on this
this positive picture is being built
management specifically
when a person begins to see
its own internal line of development
i.e. he begins to see
what does this civilization bring him anyway?
and in general how should he live in this civilization
so that at least this possible global catastrophe doesn't happen

i.e. how to survive under the condition
so that this global catastrophe does not happen

then he is forced to interact
with all the mass of information
it seems like one and the same with my technologies

and but when he has technology
Well For example there are technologies of my Teaching
allow him to escape
and prevent a possible global catastrophe
it turns out that he is of course implementing these technologies

and here you just need to see the Thinking of God
where God gives knowledge
because God gives natural Eternal development
so at this moment
when a person acts for the Salvation of all

God is practically right next door, yes
i.e. His knowledge is nearby
and He himself is in principle not far away physically, so to speak

then it turns out that based on this
this is such a management
going to practically even so to say that Thinking
which God needs
i.e. a person begins to reproduce Thinking himself
which God needs
to realize God's tasks for Eternal development

i.e. there is no need to suppose to speak to God all the time
this is exactly what needs to be done
or some such specific mechanism
the person is already starting to get ahead of the game Means

and this level is what you did in management
by the advance system
there is more than just your level of management
where you put on yourself this very structure of Eternal development
through the structure of God

but you can give it yourself
your free will
can give Infinite level
namely the Eternal systems of development

what difference does it make a person can build a house there
build some kind of carpentry option there yes
so the tool is a carpenter's tool
build suppose there is a table, etc.
but he can also build through Consciousness
Eternal development

because he is given free thinking, he is free
the main thing for him is to have a task
and put it on the level of technology

then it turns out
all those who are engaged in it are already real
namely Eternal development
based on the results after all

but the criterion is still actions and practices
there is still a practical result

they naturally move correctly

i.e. it means who, well, even here is a simple option , yes
Means well from the point of view
assume such a comparative comparison yes
in management

let's say if we consider it as a whole
the process is precisely according to God's tasks
where for example are the resurrection technologies
This is still a counteraction to a possible global catastrophe

because it is systematically proven
that man is indestructible
weapons are already pointless
this is still the development of real orthodox Christianity
in order to attract more people to Christianity
and to other religions too
studying the fundamental level of God
Actions of God
God Eternal
naturally He gives the technologies of Eternal development

and here are all these directions
these are, after all, orthodox directions
it comes from God
and then in any case everything that does not contribute yes
for example, there is the concept of "sect"
this is what is not based on the result
what is blocked or used there
some routine old data
this is what a cult really is
as if those who do not rely on Reality

and it turns out that if we
for example, we put it in the context of the discussion
the question means
one who relies on Reality
and gives real development
it's clear, logical, simple and clear from God
what is canonical development

then how are there such things like this Well, of course you can call it that
as if those who understand Reality differently, yes
like a sect
although it would be better of course to just give them a control system
and try not to fix the concept

and teach them how to act in time too
just adequate just adequate
in the conditions of possible destruction of Reality there

and then it turns out
that here we can still transfer technologies
even to those who well as if it broke away
from the level of the current Reality
or is he still thinking in the pre-nuclear era?
thinks that it means there is no need to control Consciousness
there is equipment
no need to control Consciousness
there let's assume political processes
or not to bring into Consciousness
namely the technologies of Eternal development

i.e. this is still before the nuclear age
perhaps it would have been acceptable for some time
as soon as the first global destruction system appeared
naturally a person will have to
manage processes
i.e. control the equipment control health yes
and create systems of real counter-control
against destruction systems

and naturally the whole religion will be focused on this
In the future, Christianity will mainly be engaged in
precisely the level of real management
when people really live forever
there are no real man-made disasters there , etc.

i.e. a completely practical religion
like any other fundamental religion by the way
which allows people to simply live in reality
in this case it will just be a task
namely the Eternal development of people
all the people of the world

then it turns out that
Well, what's the difference?
among people and in social movements in principle
some groups of people
in political systems

because for example there is a party of DRUGG
the task of Eternal development of people

this is a statutory task

and it turns out that based on a kind of unification
just why are we considering
one of the topics is still religious
although I say that all the topics, for example, in my Teaching
equalized

science has an independent direction
education there politics sociology etc. religion
religion is one of the directions, for example , in my Teaching

however, when integration
Well, well as if primary control
occurs through often religious ideas of action
there in politics in science it becomes easier to achieve
results of precisely Eternal development

and based on this we see here
that the social level of manifestation of God as a man yes
he is such that God is to everyone even there
who doesn't understand the situation in this case
gives a level of development as if from all sides

i.e. He leads
then on the one hand
information
sometimes with another, sometimes with a third
and in the end it is still carried out
collective management action
when people actually do implement management
Well as if in an Infinite magnitude but still together

i.e. it turns out negative
well, that is, negative action
in Infinity it is impossible to undertake

i.e. any negative action is external
in Infinite Development
has no resonance

because in Infinite development there is only that
which corresponds precisely to the Eternal development of people

therefore we can work in complete peace

knowing that no one under any circumstances
can't stop us
and calmly, as if simply reacting
from time to time as if well react socially
there politically or there religiously including yes
so that we can teach people

namely Eternal development

then it turns out like this please
the way of God
social way of god
follow in the same footsteps
here is the synchronization of Thinking
at the same time social

why did God show His way so that He can show
so that the people who follow him
they must definitely
Well, I still need to implement Eternal Development for myself personally.
and at the same time any of their actions
will be an action after which others will follow yes
millions etc.

i.e. it turns out that based on the structure of development
so that humanity can develop infinitely
God must necessarily show the social level
it's still social
i.e. to show that it has not been decided in the social aspect

explore the depths of social foundations
precisely from the point of view of Eternal development
why man
Here's what can be done now
i.e. why does a person seem to be inactively engaged in this
in the modern social system
what is needed for him to live forever
here in the social environment in the political environment

i.e. God must now also resolve fundamental issues
as for a human
i.e. how much deeper does a person understand the knowledge of God
so fundamentally God decides
his personal questions

i.e. interaction at the dialogue level
and not at the level of orders, let's assume

and when you start to see
that human free will
who knows the fundamental level of God's Thought yes
or His Actions
it means this level is starting to come out
just at the level of direct Eternal development
the man himself
i.e. his social conditions begin to improve

With his help he already has God
with direct help when he receives knowledge of God
status starts to improve
Well For example there is social, that's clear
but he also begins to perceive himself spiritually
still as a person who can manage
Infinite level of development

and this person practically means he can
already at the level of the Spirit of his personal
understand that it is completely synchronized
man with God
i.e. he does it the way he would have originally wanted to do it

that's the subtlety here
God gave him a task, gave him a direction, for example
but here he comes to that person
or something of your own personal identity
when you can express yourself in such a long way, let's say
however, this is exactly what happens
he understands that this is his personal task
he himself thinks that this is what he needs to do
his personality

and then it turns out that on the Spiritual plane
he is completely free

i.e. he is calm when doing any task
i.e. he can do management quite objectively
i.e. any control in principle is laid out for him
anyway in a good scheme for example

and as if from this you begin to see
what if some social processes are happening there
you can take collective control at will
it is possible under general management there under

for example, I can give some management tasks
social yes
you can control them
anyone can give them
You can pay attention to them and help them

there are general social issues
which, in principle, kind of exist and so on among people
you can manage these issues for any person

so that's when he understands personally
what is it that he does himself man

it is actually like an internal component of God
this is essentially the Soul of God in action

i.e. it's not that the Soul merged with the personality, yes
a person completely
namely the Soul of God
God wants it this way with His Soul

i.e. you begin to see the Soul of God
when you are absolutely free and make your own decisions
there on Eternal development for example
your Spirit begins to see what is happening from the Soul of God
how he thinks from his Soul i.e. Truly thinks yes
The True Thought of God

and when you start to see it
then this is where it really comes into play
the level of such a kind of strategic calm
for the personality of a person

Well, that is, in this case it significantly improves the events
that's understandable
but in this case it is for the individual as a whole
i.e. he understands that all Infinite events
he has them open for action

i.e. at some point he understands
what yes Infinite development is the same as now
normal everyday level of perception

i.e. the layer of Infinite development opens up
and you start to see that at the current time this is normal
in childhood such elements
sometimes people open up

People have a mechanism for learning
this state of this knowledge

and when you start doing this
for example, practically well like regularly on purpose yes let's say so
then it turns out that you see
very simple, so to speak, level of control
for example the one that is related to that
what, well, what are you supposed to solve there , what are the tasks in the future, yes

you are always developing, you know what you are doing right
Well, first of all, it's clear that it's right
any person would want to be there for himself of course
and yet it is pleasant and happy to develop forever

i.e. if he knows that the technology allows it
then naturally I think he will strive to do so yes

then it turns out that here well for example, some one-off situations arise
well let's say we'll call it sectarian conditionally yes
some isolated manifestations
who, let's say, don't understand this
they start to counteract there

So, you have to teach with your personal actions, yes
there it turns out by personal example
and by proving that the technology is so sustainable
that no external systems will work anyway

Well, the evidence is based on facts.
i.e. there are facts
The fact cannot be changed because of the past
where is the control system
and there are, let's say, systems of external development from God

i.e. God gives the following knowledge
consider which
that's exactly what God gives
here is the skill in dialogue where there are systems
not as if balanced, let's say Yes
look there
what does God give how does he give them knowledge
for those who, for example there he doesn't understand, doesn't know or doesn't want to
to study there for example Eternal development now

maybe he thinks that there might still be some years there
on the usual automatism, for example , to live there
and then start studying
but the concept of "later" doesn't really exist
for God yes
for God there is a concept of "direct" there one-time "Action"
emanating from a single level
God Reality Man

and here I entered the following parameter
It is God Reality Man
when exactly does God and man interact
will always give knowledge of the whole Reality

i.e. everyone will learn and everyone will be trained anyway
over time
in Infinite time everyone will know anyway
we just need to do it in a small number of years
give basic control

and in fact
in the face of the possibility of global destruction
for example from a nuclear explosion
Of course we have to work faster

that's why the task is to work faster
from the point of view of the logic of God and man
this is the task of again uniting Thinking

i.e. here God and man are united
it's just a task to do it faster
because the external environment is such
that a lot has been accumulated
really are bacteriological nuclear and chemical weapons there
there are some there that are often uncontrolled
as if the processes there are spontaneous, etc.

and in principle here is the synchronization
namely, actions at speed
the ability of people to respond to a system of possible disasters there
on the system of preventing death by the way in any person
anyone has

This is very important here
the most simple mechanism in general
so that there is no destruction

so that we can be sure that there will be no disasters there, etc.
just set a task for everyone
so that no one and everyone dies there
and this task is gradually or immediately implemented yes

so here is the concept of "immediately"
that's how high the concentration is
in the collective Consciousness
that we must [...] pass on knowledge to everyone

well okay can we concentrate there
try to convey
but then it turns out that it still takes some time

and this synchronization at the exact speed, so to speak Yes
on a precise system of knowledge transfer
this is precisely the center of action
here the Thinking of God and the Thinking of man coincide
precisely in the center of the Thinking of God and man

Well For example there is a universal sphere of Thinking
God and man yes

that's exactly it, with any number of actions
with any human Thinking
synchronization at speed
precisely on the fact that in any case
we will have to manage to save civilization
we will save her in any case
we just have to do it again

and it turns out that the acceleration of speed is like even yes
increase speed
up to the level, it could even be logical
i.e. it doesn't mean that it is necessary there let's assume we work day and night yes
and maybe this is what we are talking about
what just needs to be worked out is simple
a certain action , as it were, one

i.e. the ability to provide at the right moment
the necessary information
to the right place
and it will be synchronization

i.e. well for example, to make diagnostics of a nuclear power plant
The nuclear power plant did not explode at all

until they are no longer cancelled
here are systems like nuclear energy, yes
exactly this type of "fuel"
It is already clear that humanity
this problem will not be eliminated

i.e. it is one action
i.e. the speed is not what it looks like
what needs to be increased there Thinking is somehow artificial
or something else
you just need to be able to react to the situation
because everything that happens in the world
this is also an action of God
and the knowledge of God and this concerns God

so it turns out that if so
prevent something in time, for example
or he can orient something correctly
in general in the history of the development of civilization
then this is synchronization

i.e. human action
in a social- as- material system
correct action

and that's when we start to see here
here's how to say the top of this so-called basically an iceberg or something
when we see that a person is as if
in the control center
but underneath it lies the entire controlled Reality
he needs it somewhere like this go down somewhere there
or make control
and it depends on him how this iceberg will behave in the future

then it turns out that it is clear that every person
really really controls
in general, you could say that based on the location
the entire system of Reality
moreover, he can still improve it there
in the right direction

but here it is important to work out a path
this is how he perceives it
how he sees and how he gives well as if Well or what?
the structure of his further Thinking

on the subject of managing some event

because that's how God works too
He is also in the center of Reality.
It somehow works out
well, "some" for a person
God always knows what He is doing

and so it turns out that a person should also always know
what is he doing

and here is this overlay
something like this well, a product of Thinking or something
on human action
when a person always knows what he is doing
and God always knows what he is doing
this is also one of the levels of contact
in Thinking
God and man

to always know
well, that is, to cover the whole Reality , including the Infinite
you need to watch all of Infinite Future

and for this you can well like on a trampoline for example Yes
push off from the Infinite Past
make a jump look up there and kind of remember yes
Well, that's a technological trick

but here the situation is like this
what about one-time jumps
anyway, it is impossible to shift the situation here
here we need to make sure that the management is like this
that you must be systematically

i.e. it's still not a trampoline
this is the management level
which is always with you
wherever you are there on the trampoline
rode on a water catamaran, for example

i.e. it means that here
this is what is inside you yes

and this is precisely the structure of the internal Thinking
the structure of precisely, as it were, an internal, or something like, Spiritual action

when you act by the Spirit
a system of internal understanding of the whole Reality
Well, God understands, right? as if inside yourself

that's what
how is God separated from the outside world
the outside world
and what He realizes as within Himself
this is what, as if, separated itself in itself
as a person yes

i.e. the only form of separation
God from man
is the form of a human
precisely in the plane of Divinity
and at the same time from the whole world

how to differentiate
that this is God for example
because He has a human body
and the body has Eternal development
so it's natural He can only look like this

and that's when you
for example, you start making management further
see next level
take all external Reality
as if pulling it towards you
and here with the inner glow yes
with the glow of your Spirit
what's inside
what is always with you

it is the Spirit who creates
The soul in action
and try to take control of Reality
Well how to lift it, like weightlifters lift weights
i.e. lift her up towards yourself, move her towards your chest , so to speak

and you will see that you have all the control systems
will begin to be implemented more correctly
By the way, this element allows in a certain case
for example, a person can always achieve Eternal development
if he doesn't forget

so i.e. try
i.e. well, mentally remember, as it were yes, we always say so

keep in mind
and do this exercise
then the person really already has a 100% chance
100% guarantees that it can live forever
at the same time he can bypass
completely different systems due to this concentration

so what do you do now this management
I will work with you
the main thing is that you should feel it
precisely as a certain weight
for example, moving the World towards oneself, yes
influence on the world through God

work hard
I will work with you together

when you work on this system, yes
according to this method, these are the approximations
try to regulate it anyway so that it doesn't happen
Well, there was no physical pressure
it is precisely in the management of information

because in principle it can be felt
like a wave on the body
I teach how to manage
so that the body is still, if possible,
in general, well, in a normal state, preferably in a comfortable one
i.e. no pressure waves or anything like that happened there

so you just need to visually track it
where is the border of the outer world
and just try to bring it closer to you

this way you have a direct transition
as if direct control over the whole Reality
and now you start to lead
Well For example there you can compare it technologically with that
that a man caught a fish
starts to lead her and here she leads
and there is a certain contact yes

but in this case we can't restructure anything
i.e. we can't bring it there let's assume by analogy yes
harm to this fish there

we have to work like with fish
but there is no fish on the hook
but the feeling is the same yes

the ability to lead management to enter into Reality
this is where you discover the structure of Reality

i.e. well the hook harms the fish
so we can't have fish on the hook
but we must go precisely to Eternal development
and this is it [...] I showed it now

i.e. the ability to use this simple beam in general Yes
logically very simple [...]
it is clear to every person in general
people often do this in principle
but not always technologically

here is this simple light coming
it's more white, like a flat version
what does a certain road look like

you can walk along it quite calmly
and standing as if in one place
in the future this light will give you the level of Eternal development
in some situations it will not allow it to happen
Well let's assume some negative things
in your life

and it turns out that when you have this light in yourself
Well, we saw him, yes.
and walked along it, let's say, even having perceived it
because Perception is also a path

then you are again in sync with Thinking
and even the opinion of God
in relation to you

i.e. you start to see
that God does not approve
that's exactly in Infinite Development
approves of your actions now

i.e. for Infinite development you are acting correctly
from God's point of view

yes of course it could be some tension
are some events there
which will require some concentration for some time
but these are details yes these are details

the main thing is that you are on the right path
and what's more, it is open to you
so once you've seen it, you've already passed it
God is the same way
seen means done

and it turns out that it's like this
you have considered all your further development
collected almost all the information yes
about myself
in fact, first of all, as if about everything
where are you in Norma so to speak

and now here is synchronization yes
with the Thought of God
it's not just your internal concept anymore, yes
not only your internal as if Well, it's a control system or something
and this is what you perceive

i.e. synchronization with the Thinking of God
it is both internal and external
everything that god does
everything that is on the Spiritual level inside you yes
full connection
precisely for the Eternal development of the physical body of man

i.e. at this moment in general always
you see that yes the physical body of a person is Eternal
but let's just make this knowledge broader
more common
then this Reality will come more to everyone

it means because then technologies will be included
technological ones there so that technology doesn't destroy people there and so on.
there weren't any accidents, etc., etc., yes

a whole complex of technological elements

and it turns out that we see
well besides that there are social institutions, legal institutions, yes
in management at this level

and here we can clearly see
real social society
where are the people living forever
and this management allows it already now
i.e. when you simply perceive this information
already allows you to see
that there is a completely complete synchronization
in action with God

and then your Thinking is obtained within the framework of management
naturally already synchronized
i.e. it exactly corresponds to the Thinking of God's task
often it is autonomous
but often completely coincides
the main thing is that you always achieve control

and in this case it is absolutely creative
even for those parties
which for example there are no constructive attitudes towards you there, etc.

i.e. you still don't care to them
convey in a certain way
the most powerful knowledge
on Infinite Development
and you will still teach them eventually
they too will live forever creatively know
what needs to be done and how to maintain it
this direction of Eternal life

so when you start such management
it is synchronization with the Thought of God
try to do it this way
so that any thought of yours any action
this is the management that always leads
to the goal of Eternal development
i.e. necessarily through the goal of Eternal development
come on in

there naturally yes
Salvation from a possible global catastrophe
there is simply no other option, everyone lives there forever anyway

i.e. go through but find it in the information area
namely Eternal development

i.e. precisely the level of Eternal development of civilization
and by the way, I'll definitely tell you about myself personally

so when you, for example, are already doing the next action
but the next action is probably already there
is carried out in a macro-creative manner
for everyone at once
and to speed up you can even speed up here
control
i.e. to speed up the implementation of the action
just a controlled level
as if external control of external desire

because desire Thinking
this is already control in this case
namely Macro-creative control

when you start to highlight Thinking
i.e. some specific area of thoughts
and start implementing
here in this space
then it's worth it
this is management together with Thinking
means to define here

i.e. management is one line
the thought, for example, is directly visualized
you begin to invest in the structure of Eternal development
and you are setting up your thoughts
to synchronize with God
then control occurs
namely the general and your local
this is a must

this is where you can achieve those management goals
which in principle will be considered, for example , difficult to achieve
or tasks that have existed for a long time yes

in diseases these are, for example, chronic diseases
there are difficult ones
Here you can always achieve a positive result
for you and for the whole world in general

pay attention to what is positive for you
here is always positive for the whole world as a whole
without exception for all parties

This concludes today's seminar.

Thank you very much for your attention
