

GRIGORY GRABOVOY
The Teaching about God
Universal control
04.04.2005

Hello again
the topic of my seminar today
This is my Teaching about God
Universal control

In this topic I show how
to form the impulse itself
exactly in such a way that it would be universal
i.e. the very form of the impulse that is in front of you
for example, in the form of some form of information
spheres suppose

and do so that the impulse during its implementation
worked in a completely universal way
to any information structure

i.e. there is a management task that you are forming
not really management as such
the task itself

i.e. you work outside the task system
and you work only on the shape of the intermediate pulse

and the impulse should be like this
so that regardless of the structure of the tasks
it was precisely universal control that was carried out
from the primary level of management
i.e. the level that is closest to you

what is the advantage of this system? It is that
that you firstly spend less time then
in order to mean to make management

because you just need to form
only one form
which for example there is the closest to you

and secondly you get control
often with many tasks at once
because if the impulse controls universally

then it turns out that you can decide
many different tasks at once

often the tasks can be of completely different types, etc.

and as a rule this control system
it is being implemented quite well
and very practical, even pragmatic
in terms of, for example, treating a disease

because as a rule
treatment is still a complex management
where it is necessary to identify
for example, some specific control system
at the same time regulate
there for example, some closer systems

or, for example, regulate
predictive systems simultaneously

and predictive systems are often linked
with some human events
where possible, it is also necessary to regulate events

therefore, multi-angle regulation is obtained
which includes
the need for some kind of control
even differently depending on the type of task

and in connection with this it turns out
that this is precisely the impulse of universal control
allows to build such linear control
from you
in the Infinite for example form of control

and then you get already
in fact, the technology of Eternal Development
where one impulse solves an infinite number of problems

i.e. if you stretch the impulse in shape, as it were
in the form of Infinite Control
namely the management of Infinity

then it will turn out that you are implementing
namely the structure of Eternal development
in relation to oneself
and in relation to, for example, there to the external Reality

or to the structure of precisely these exact events
which are necessary

for example, in the implementation of some long-term projects
or, for example, in the implementation of some tactical
i.e. projects that are close in information, etc.

i.e., precisely the most prolonged projects

i.e. in this case the accuracy
this is a prolongation of action
and when
it is in the action of Infinity

when do you start this system
consider
it turns out that the shape of the impulse itself
here it should be identified in advance
in the form of a kind of culture of light accumulation of light

in the form that you should see
let's say this can be compared to that
what is for example well, some for example you can call it that there
culture is the one that is grown
in the form of some substance

here I meant this control
what is meant by the culture of light
what we grow as a certain substance
light

in this case the first property
axiomatic principle in this system
the light should be incoming

i.e. the first level of management is precisely universal
that the light must actually increase from the external environment

and photons of light actually
they have a more branched form
come to the control center in the form of a precise system

i.e. in fact, this is if you look from here
from the control center
then the light comes out of the point and develops
in the form of an increase in a certain beam of light

i.e. from the point of view of the current or past time

we just see an increase in the beam of light
but in reality it is still in the present tense
we must see a different picture

which, well, looks like a comet's tail, so to speak
what exactly is the influx of light
occurs in the structure of narrowing of management

this is how human consciousness works in general
what is the concentration of Consciousness
this is still an increase in the density of Consciousness

this means we take a large amount of light
we concentrate
and it turns out that this is a narrowing after all, yes

and the more we are as if in density
we increase the concentration of Consciousness
the more precisely we can make the management
due to the fact that we simply increase the amount of light
at the control point

Well, it's a somewhat mechanical principle
by way of , as it were, gross mass systems of light

i.e. you can even measure here by the way
mass of light, volume, etc.
here is the path of the structure of Consciousness
i.e. to use Consciousness as a structure of some measurement
in the accuracy of the construction of this impulse

i.e. I am talking about that now
that the impulse as a whole is built
the technology is being mastered
then you just need to apply it
structure
which you perceived at the level of Spirit
i.e. you won't necessarily be building it constantly

therefore it is enough at the level of the logic of Consciousness
build it once
and then you just contact him
and there is instant control over virtually any task

that's why it's necessary here
technology

still need to be considered in great detail
as a technology of construction in the first place
and track this construction

and that's when we already make the first level
i.e. first we look at the other world
which seems to flow in
i.e. the collective level of light

next we must
in the structure of your Consciousness of Perception

to reach the level means
these kind of segment-like systems of light

i.e. from the point of concentration
here the light flows into some drain all the time yes
this stock is the center of this form of management
universal control

then we go from the center
so how do we actually exit?
into the structure where the light came from
i.e. well like a comet's tail, yes so to speak figuratively speaking

and we must actually
follow the line where the light curves

i.e. do not go into the Infinite control phase
but try to perceive with Consciousness
structure where the light is rounded
any final object any form
or there, for example, is a system of controlling clairvoyance
this is still a system where the light is rounded

i.e. we see
namely the final forms due to the change in geometry

An infinite quantity becomes finite
due to the fact that we can do it by force of will
change the structure of light

in this case, by the way, the technology is quite simple
we just need to find out
namely the control geometry
and then synchronize with the structure
Souls

Spirit and Consciousness

i.e. we work in logic in the structure of Consciousness

for example, as God does
from the point of view of equality of information objects
He has
for the Soul
Spirit
and Consciousness
objects are always equal
i.e. He does the same for Himself at the same time, so to speak

i.e. He can do it
for example Soul
can do
In Spirit
Consciousness
and he has the same control system

and when, for example, you master it
this is what the structure of the work is
as God does

then it turns out you will have to be here
very clearly identify
Well like the next type of control or something

what do you need in this management system
also to understand for yourself
that you should be able to make this design
at any level of management
With soul
In Spirit
Consciousness
or there is a glow coming from the physical body

here even such a parameter is in effect
as you can see
the structure of the radiation of the physical body
and at such a microliptonic level
there are quanta where they are manifested
precisely as the structure of the physical body

build the same management system

i.e. in this case universality implies
that you are building this momentum
in fact, any system of its own

and then it turns out that you are already working in principle
with this system
then you don't pay ^{any} attention
what level of management in general
you built this area

let's assume **this** For example **there is work** there
With soul
or Spirit
or Consciousness
you do it anyway, ^{well} it turns out that it's right
because you work the same way at all levels

and therefore in this control system
This is the next axiomatic feature
of this management

you must find within the management system of your
levels that build the same
and you perceive at all levels equally

i.e. at the level of the Soul
you perceive it built on the level of the Spirit
just as you would build at the level of the Soul , etc.

i.e. universal level of control
implies universality in everything
from you ^{yes}
and to you

and when you start this level
that the information flowing to you
see in photons of light
it is also built universally

then it turns out
that radiation ^{as if} from any object of information
should be the same

then there are no questions at all
it turns out that there is control
for all levels of information

because you well as if you have the same signal

i.e. you are already actually configuring the information this way
that by putting some filters in your Consciousness
you get the same control signal

Well for example, you can take a video signal there
translate there into electrical contacts
and get control of the video camera there yes
but all this goes into some digital boards

the same thing, well, let's say roughly , figuratively speaking
you can compare it like this

Here
and here, by the way, this is clearly revealed
exactly as a system in general let's say so
some conversion of any external parameters
into one universal environment
which controls

and when do you start working already?
precisely with the construction of some kind of gateways, yes
to get from any object
the same signal

then here it is
this is where it all starts, basically
the main job in this department

i.e. having previously constructed what I said
at all levels
including especially often here is the need
it is precisely to clearly recognize universal control
from the management side
for example, by the Spirit
With soul
or there by Consciousness

you can even make the control, let's say, of this type
that by controlling the Soul for example Yes
according to their tasks or there by Spirit
see what the difference is in subjective sensations there

if you control the structure of Consciousness
how exactly is it a separate phase of management
like here yes

and that's when you start to feel
precisely the universal environment
you are already learning that then
that the structure of light, for example , even
coming from his physical organism there
you start to manage

then you start to feel
some kind of universal module
here we need to practice

as a rule, here it is just according to my Teaching
you need to work as much as possible practically
or clearly telling people there that you are working
or it's not obvious there but tracking the result

and here is when you see already
result area yes
and actually this is where the control comes from
then here is the management itself
that's exactly what this universal gateway level is
where you actually any form
translate into the same type

i.e. radiation from any object
passes into some form
about which I said that it is built sometimes
enough there for example, at a more complex level
although not always complicated

often it can just take a long time to build, that's exactly it

but the advantage is that
that you can prepare certain shapes
for different objects
and in the future you don't need to go back to that
to build something else additionally

you just remember that in some place in space
you left the control object
then you just need to refer to this object
and pass light through it
and that's all

for example, consider that treatment is yes there are people there
it's somewhere, well, somewhere here
here is the information area there

animal treatment

it could be ^{there} 5 cm to the right

somewhere restoration of plants somewhere nearby, etc.

and do you remember these areas?

or management ^{there}

so that there would not be an earthquake there with destructive force

this is some kind of third area

and what is by the way quite interesting here

that it is close enough to the level of treatment of people

you can watch here

what area is close to what

this is how these Laws are objectified, generally speaking
in information

and it depends on what forces are involved in this case

and what are the optical laws

and how they ^{interact and} are distributed

in the control system

because in each area light works differently

^{for example} in the case of treating people

the light works as a kind of ^{so to speak} concentrator

i.e. similar to how it works itself

the area itself is primary

i.e. the light flows ^{as if} into the structure of a drain of some ^{kind}
center

in case of ^{for example} well, counteraction

any earthquake

here it turns out that the light works the other way around

as a counter light, i.e. it goes against the flow of light, etc.

Well, in principle, this can be studied

just by setting a task

and try to observe this area

^{for example} if we take treatment

well or there is plant restoration ^{there}

from plant diseases ^{yes}

then it turns out that here

in the form of separate, simply some such corpuscles

light segments periodically
as if coming from a plant leaf

if you fix the light at the right point
then you can restore the sheet ^{there}
i.e. not to let him leave this piece of paper, etc.

i.e. here it is possible to get
that ^{in general} to study the nature of the interaction of objects
and already build on them
an even more general universal level of control
what is required in event management

for example, people participate in events
there are plants that are located
^{there} in the rooms on the streets
animals etc.

it turns out that what is needed here
some kind of reflective module
some kind of screen through which already
collective image
it still has the same
as if the reduced canonical level
which goes to the control center

and the simplest level of construction
this system in optics
now I'm describing geometry more

in management
although here, in order to reach it, ^{as it were} Yes
to the level of remote control
there to Infinity
you need to work with your Soul often
to a person

here is the level of the Soul, it greatly simplifies management
i.e. there is no gravity of the control object

in general, this is the practice for the future
that the more you build
optical design
the easier it becomes to work with the Soul

So, in principle, the Soul allows you to work
in a space that actually ^{seems to} have no weight

i.e. there is no load on the physical body of a person , for example

then when are you still doing it ?

the structure of Infinite development at the same time

you have to see here

where the Soul conducted the management

in fact, it kind of conveys

the management structure is already Spirit

Spirit is Infinite Interaction

with Infinite magnitude

in this case

i.e. linear light coming from the Soul

in the structure of management for example

what do you call a control field and a certain place

can build Infinite Reality

by the fact that the Spirit continues to work, as it were

i.e. it can still be used

control transfer structure

from one link to another

it's a bit like that

Well, it 's a dynamic, sometimes unusual system.

we track what works for example

structure of the Soul

then the Spirit

then Consciousness

and we see that the structure of Consciousness

always works in proximity to the human body

that's where we start working

at the point of work, for example, with the Consciousness of a person

Consciousness is vectorially linear

always strives towards the human body

and by the way, therefore, through the structure of Consciousness

here's an example Well, it's quite easy to manage

tactical processes

i.e. those that are not very distant in time

and the structure of the Soul is already strategic

those that are distant in time

and to manage harmoniously

structures

distant in time or close ^{there}

it turns out that it is necessary here

well, actually, here is the intermediate phase of events

also build through a kind of filter

i.e. harmony itself is a certain coherence in management

and this is universal control

It helps a lot

to build an intermediate system

well, the structure of Consciousness for example Yes

and then we can ^{generally} talk about it

that the Infinite quantity is controlled by you

from the current area

and in general in the structure of light control

design

why is it precisely controlled?

from this control center

because any movement of the center

affects the entire structure

and ^{in general} here we see such a level

what do we need to build something like ^{this or something like} an optical medium

be able to do so that this point is fixed

i.e. our level just ^{sort of} passes

through this light ^{or something}

level of Consciousness

here is the one that determines the need to launch ^{yes}

of this control impulse

and that's all

and activation occurs

of this universal control

i.e. we shouldn't move anything anymore

i.e. in one impulse we decided

the light of Consciousness ^{is there}

or integrated light of the Soul of Consciousness

it doesn't matter any photon of light or wave of light

which is already coming from you

^{so} as soon as you launch this wave

to this segment

this form of management

you already get universal control

i.e. any light that gets in
into a system of some gateway filters
and finds himself in a harsh environment
which is universal
from a management point of view

for example, God is enough
for example, one impulse to implement
and the whole world is realized

i.e. here He gets one impulse
equal
all private and public
or some global systems

it turns out that it is here
here is the redistribution of light
this is how light moves from one place to another
how does it change properties for example and the form
this is a very special task in general

and by the way it is laid here
very powerful technology for treating people

because if you consider
the human body as a structure of light
and one that has
different distribution laws
and various Laws of development in general
within each system
each organ
or even cells

then you can see very subtle connections
which, for example, in the usual way
they somehow don't show up
that's precisely from the point of view of this task

and when do you start
this is how to look at the human body
then you see very fine structures
which often have a radical impact
on the whole body

i.e. it is enough to study the distribution of light
from the point of view of the light-optical image of man

within each system
and regulate the process
it is possible on a very fundamental level
precisely the level of Eternal life
Eternal development of man

because life is also light
and you can bring into the structure of light i.e. life
into the human body
by simple light transmission

then the treatment turns out to be completely self-sustaining
this looks like this in general
just what you study
the structure of the functioning of light

for example, it can be studied in the human heart
as if the light there works as a concentrator, yes
well if it works
it is the heart rhythm that is compressed
then there is an influx of light
when the heart muscle relaxes
it turns out it's going well
in fact, photons fly away as if into the external environment

and if you learn
studying the structure of photons
wedge in just insert
the necessary light-optical elements
for example, you can there to cure the heart
if a person has a problem with his heart there

and in principle it can be done
if you learn to regulate this system there
in an ideal coordinate system, as it were
then you can make the structure of the heart development Eternal
for example, the heart is simply made Eternal

what is the difference between the Eternal heart
or a heart that works
for example, according to the usual parameters, well, like those
which are embedded in the collective Consciousness yes
when it is believed that certain heart diseases exist

the only difference is that
that in the case of setting the task of the Eternal level of development
that's exactly how the heart works

that at any level of events
the heart always works ^{yes}
i.e. there is a certain universal level of control
which allows interaction
with any information system

then it turns out we just need
^{so} in these photon levels
introduce the structure of a universal plan

so that for ^{example} the outgoing photon and the incoming photon
did the same job
^{so} they implemented it
namely the Infinite level of heart work

and then it turns out if we can
make one organ eternal
then all other organs can systemically outgrow ^{yes}
to the same structure of Eternity
Well, it will take some time

and you can just take and design all the organs in this way
or all human systems

i.e. it is necessary to study, ^{for example} there is a liver
it works exceptionally
as the level of incoming light systems
i.e. well, some kind of light absorber drain
^{there} the spleen is on the contrary like a reflector
light doesn't even reach the bulk of the mass
and it works ^{as if} some kind of screen

i.e. distribution laws
^{well} close to the reflection system
here is some glass that reflects 95 percent
5 percent reaches the tissue ^{of the spleen, etc.}

i.e. it is possible in fact
having studied the structure of the organ's work, ^{for example}
from the point of view of this process

make every organ eternal
due to the fact that for ^{example} then in this case
what does the spleen need ^{yes}

so that the spleen works forever
^{so} what is it autonomously

in this case I am talking autonomously from the organism, so to speak
although naturally we are talking about that
that the body works systematically

but for God
every organ every element of the World
works completely autonomously
in principle, He can create any Reality
God

it turns out that we can create
any system autonomously
i.e. well to cure there
some separate organ there a separate cell
and at the same time, in principle, for example, here is the fact itself
that this happens in the whole organism
this is the structure of just the Soul

i.e. the body is a part of the Soul
here, by the way, it is clearly visible
that the body is really a part of the Soul
as if in a mechanistic sense even

i.e. working on individual systems
we can work on them autonomously
and yet the body remains intact

so it turns out that the Eternal structure of the Soul
originally containing the body
while not changing in any way

those. the body does not change
neither the form nor the shape changes
even the structure of events does not change
because you set some events
you implement them

i.e. it turns out to be one of the universal ones
what kind of levels of management
for the Macrocosm and the Microcosm
this is the physical body of a person

i.e. the body is manifested as a certain
Well basically a hub
which attracts light itself
this hub

i.e. the body can bring light to itself
can adjust the light

let's say these macroprocesses and microprocesses

and at the same time the regulation property is hidden
or there is, so to speak, somewhere inside the physical body

i.e. inside the physical body
there is like the system itself
which yes organizes the fabric

i.e. attracting light filling the structure of the fabric

and at the same time regulates the system

well, like some kind of light waves there

i.e. although it is inside the body
but as if it is above, i.e. outside the system
revealed

i.e. it is a control system located inside the system

i.e. light that moves at an even greater speed
than for example there well the maximum possible amount of light

so it turns out that it's on the body

at certain points yes

specific lines operate

coming directly from God i.e. C the light of God
somewhere it reaches the human body
and this C vet has exactly these properties

i.e. it regulates these processes

being as if outside of space

there is a physical body so to speak yes, although they are inside

and that's when we start these areas

search for example Yes

find there inside the body

and in principle any person by the way

there you'll be more careful if you study light optics

it can reveal such points
they change periodically

but often for a long time, especially in childhood
they are stored in approximately the same place

and when you start to kind of move

this is the concept, actually, to work through it
then further on, for example, it becomes generally clear

for example, here's why there, if so, outside of physiology
or there are biological principles of development
a person there
this is why a person grows from the point of view of light optics

if such points remain for a long time
in one place
then it turns out the light becomes
more like de- concentrated
from exactly one place

i.e. these diverging photons
slowly fill the space yes
a person grows

if they are more mobile
then the dots don't have time to fill the space
and the person stops growing

i.e. they moved to some place
the filling is just beginning
they took another move, etc.
i.e. they start to perform some other task yes

i.e. at some point a person stops growing
if we assume we abstract
let's not assume that gravity exists there
and that some evolutionary principles
determine a person's height

but let's just consider an optical model like this
in the structure of your Consciousness

then it turns out that they must exist
some well like some parameters
those that are exactly at such and such a level of growth
the person is fixed yes

Well For example there is no more than two meters in total yes let's say so
so, or is it closer to the maximum growth level?

why is this happening
i.e. some exist
these are precisely some of these restrictive gateways

not in terms of human limitations
as individuals in this case
again we need to understand clearly
and introduce the Spiritual meaning of understanding

this is not
naturally there is no limitation of a person there
and what exactly is this specific form?
defines
as if for each person
the most ideal form
interactions with the entire space in fact Yes
and with all the time

well, some kind of ideal control center
universal there autonomous
the one that actually works
in this Infinite information

because if we consider, for example,
it's just the physical body of a person
in general, where is a person's personality
Soul
Spirit
Consciousness
body

well and some other quantities there
appropriate to the person
how he understands himself

often a human thought form
This is a unique system
for the personality of a person

and in the light stream where there is a huge amount of light
this light exists
in such a fairly favorable form yes

it turns out that this is exactly it
it actually works
level of universal interaction systems
with all external Reality

i.e. if we consider
such a rigid model of the Universe
where any action is an action on Macrolight
and the consequences are distributed

across all systems under control

any particular event contains
your any action
even any thought ^{yes}
rather, the action of any thought you have

then it turns out that this is an action
or even the content of any thought

you can even see your every thought
in any event branch of any event

what happens with such a complex system of interaction
there is some internal mechanism
some kind of harmonizer
which of course is connected with God, i.e. directly
that's exactly on a personal level

i.e. personal understanding of God
and in fact, therefore, the person has already been given
mechanisms of such regulation management
they are also transferred to other objects of Reality
there animals, plants, etc.

so by the way, in terms of the level of work in telepathy
animals can easily get there
to the level of contact with a person ^{there For example Yes}
and plants too

i.e. the same level of development
any information system
this is put into this into this position
it is precisely these levels coming from God

and when you start to see these levels ^{yes}
this endless path
^{well, like some kind of milky way}
which is against the backdrop ^{of} the starry sky
he gives such a certain
^{well, a kind of concentration in the structure of Consciousness}
where it is clear that the amount of matter ^{is as if}
^{Well as if it is considered more ^{yes}}
on visual perception in a certain place

and there may in principle be laws there
^{well, some others, ^{yes}}

because the concentration of matter is greater

when for example we consider
a certain system of personal management plan
when we translate
on the personal development structure
Souls to Infinity

these are all the node bases that I talked about
in optical terms
they are actually starting to move to the level
exactly well as if control from the individual

i.e. the harmony of personality, for example , determines
harmony throughout the world
in this case

i.e. God who originally
It's just perfectly harmonious.
in relation to Himself and to all Reality

He created the world thanks to that
that this is the ideal harmony
it was originally located
at the level of a kind of Infinite Future
and in Himself

i.e. it is a level of a certain continuity
Personality and Infinite Events

i.e. a person any events Infinite
feels like a harmony of development
of his own personality
By the way, this happens quite often in childhood now
occurs in humans

well and for those who saved
for example, the level of harmonious development
as a system of its tasks for example
or consciously puts and works there at the training level

then it turns out that when you
for example, you see this system
then management, for example, of some Infinite tasks
which are at an infinite distance
this is a fairly simple quantity

any intermediate system
between you and the control environment
this is this universal impulse
but which has an Infinite form

i.e. Infinity itself

you don't even need to highlight the shape
here at the personal level
it's just a feeling of harmony
or there Perception of harmony as an optical quantity

so the management task in this case is
translation of the constructed optical scheme
into the structure of precisely harmonious Perception

it turns out that this is actually an object of control

i.e. as soon as you begin to perceive
exactly in this harmonic form
then it turns out that you are already in control in essence
how with this object
and all the others
in one impulse of Perception
or there is the action of the wave of Perception

because initially we are talking about that
what is the constructed form
it actually leads to that
that we need to simplify actions
we need it independently of this form
do management this way
to keep things simple, generally speaking
the management level itself

i.e. we need to create this form in this way
so that it means to follow up in the future
just one ray
going to this form
and that would be enough to control

i.e. if you control through the optical form itself
then you don't even need to visualize the form itself often
you just built it
then only one ray at a time
one impulse at a time going to the form
you are already in clear control

because this is a sign of, so to speak, harmony
or harmony of management in that
what do you know as if clearly and precisely
what do you need next

i.e. the harmony itself is in that
that you have accurately constructed the management task itself

in technology by the way
this is exactly the optical form that looks very simple

you take and arrange events
and build some intermediate filters
you can literally draw on paper
remember or carry the sheet with you yes

and how about from the point of view of translation
to the level of personal harmony

because static form management
it's still a somewhat burdensome control system

this already means your principle
still a simultaneous vision of the situation
forward and near you

i.e. the meaning is that it is controlling clairvoyance
in this case it works so that everything is transparent for you
i.e. you are actually as if from a great height
look
not only on the control object
but also on everything that is around
For example there from a very great height yes

at the same time you perceive separately
some buildings lying there are getting closer and closer
any events that happen around

and pay attention
as soon as you start to cross
on such a system from the point of view of control harmony

then it is enough to perceive
here is harmony or some spatial system
around the event
and events are realized
just because you looked at the events

from the point of view of this big information
spatial

and for example take this
Well like such a structure of events
so from a management point of view yes

if we take
and we take the event
which looks like this
some car is driving in one place

you take a large space

nothing happens anywhere else
as if there is no theme and control

so how to connect
these are such contradictory levels of management, yes
where should you then
It is possible to create a topic on your own, yes

at the right level
synchronize under the structure of the target management there
and get the control impulse in this way
what is the creation of the topic
this is your personal construction of Reality

i.e. you moved on to that
that you build Reality in certain places
personally
i.e. somewhere Reality is distributed
and somewhere you will have to personally deal with it
it's like before the building or there construction

and pay attention
when you work with large levels
i.e., for example , to cure a person there, yes
it turns out that it is necessary
take some very large array of light there
Well, it depends on the disease.

for example , tumor diseases
are treated quite effectively
if in the structure of Perception
take a large volume of space

and from this point of view
well actually look at the person
through a larger volume of space

you just need to perceive it clearly
what happens in Reality
not just watch
but look at real events
around this person for some time
then the accumulation of light occurs
and regulation takes place depending on your goal

i.e. the light begins to recognize
in fact the goal of the positive level
because God created everyone really
in the structure of the Soul by the Eternal Living

this information exists in a person
in certain places of the Soul

and the light starts to work
as a reasonable level or something
in terms of life there is light yes

for example, here's how you can do it
so that any object of information
became Infinite

here is a background, just a wave of light
she also strives for that
to develop infinitely

so the light wave recognizes
the nearest structure
which has more potential
in the Infinite development of man for example
and strives to go there

starts as if well for self-development
build a man yes
to cure him there or give him
add up positive events

i.e. the whole world is focused on a person
and develops towards Eternal development
through the nearest center

most appropriate to this concept
in the structure of Eternal development

and then it is clear that in relation to God
everything is developing

because all systems are oriented towards Him
and around God there is a kind of level
this integral, so to speak, Eternal development

here, by the way, we can highlight very clearly
structure, substructure, etc.
some kind of hierarchy even in the structure of information

although from the point of view of equality
there are different systems in management
but since man is created in the Image and Likeness of God
then naturally we are talking about that
what does primary control concentrator mean there Yes
it is the level that subsequently passes
it's the glow
towards God from man

first all objects of Reality
as if they shine on a person
Well, because God creates them

i.e. it is clearly visible here
that God created the element of Reality
and they shine on the person

They also shine on God of course
but with reflected light
after creation

because before creation they are the same
well, actually, from the point of view of human logic
they were not existing objects

and it turns out that man was created initially yes
to all objects of Reality
i.e. God recreated Himself but in a human body
Well, that's kind of the logical conclusion

so what happens next when you start
to make management based on this type of knowledge

you see how well how to attract
this one well or what is life-giving light ?
or the light striving
understanding light
the light that is basically looking for
a certain development structure

if we consider the laws of nature
what laws does it all happen by?
migration of animals there
Well there in the world ocean yes
birds, etc.

what laws even exist for
even insects that are at a great distance
they are some kind of light-optical wave
they seek and see yes

there, no smells work anymore
there are no gravity criteria
often the distance is very large

and it turns out that here
this is precisely the emigration system
are very clearly visible
these are precisely these life- giving rivers of light

here's if you look
on natural migrations of animals
that's exactly what's going on there

this is like a grouping like this
these lines of light
lines of life or something like that in general you can say
that life concentrators in the primary sense
as some kind of diffused form of light
it is very evident in the animal migration system

and if we look
how are laws implemented in general, let 's say
in human society social laws

then you can also see the distribution of light levels
a system tested in civilization there
well, take some cultural development there
nations or civilizations
there are laws that are adopted very clearly

for a number of reasons , yes, time-tested, so to speak

but we can see what's there
there is also a distribution
in terms of light level it is absolutely clear

where the light is exactly striving
towards Infinite development
where the level of light takes on an Infinite form

i.e. you can even by the way very clearly
see what the forecast will say then
the forecast for the development of society is very clear
from the point of view of the current coordinates there
or a separate person for example

and it turns out that if we, for example,
well, even there such forms exist
like astrological ones for example

but in this case it is certainly not astrology
and I'm saying that it could be somewhere
well, it's kind of synchronous
or well, something corresponding to some extent
concept

that the light levels coming from different objects
if you study them realistically
not in terms of astrological rigid systems, yes
and study it from the point of view of its effect on humans
taking into account individual management factors

then we get a very precise mechanism of action
for almost any system
to any level of the human body
and prolongation
etc. human development in the Infinite future
this is already, in principle, a technical task

because the future itself is the light of the future
he has the same Laws
which exist, for example, at the present time

you can do it like this, well as if it were a universal level
move this task to current

but you always understand in the current task
what to do

in general in the control system
who is engaged in management there according to my Teaching
he can always increase his understanding to the required level
i.e. he can always do what needs to be done

i.e. it is like absolute control
there must be a Consciousness
in the management there in any case
no matter how the management takes place there

and it turns out that when we start
make management even in a complex environment
from the point of view there well, is it a normal human condition ?
there should be a natural normal state
like those people who, for example, there is no management involved

that's when everyone will be doing it there
and they will still not change
level of Consciousness
from the level there Well there is no ordinary rest for a person

when let's say he is not actively involved there
management
i.e. all control actions must occur
in the normal state of Consciousness
as if logically even more so

although here is the Spiritual Administration
Soul Management
Well , it would seem that way, yes , it's simple logic
but in this case it is necessary to use exactly these levels
and manage

and there logic is quite often well generally straightforward
there the logical form is often more expressed
for example what is the logic of the Soul yes
logic of the action of the Soul

and in the fact that the Soul, as a rule, acts
at the management level simply directly
immediately affects the tissue system
straightaway

and the impact on the tissue system on matter
often to the point that it's just all over
The soul builds Reality
this is where the level is very specific, here are the Souls

so when you work on what i said
take large spaces
you need to explore the space

as a rule there is not much space
but basically it's one place
where space is needed, as if to complete construction

this is where human free will lies
always manifests itself in any action
that there is always something to do yourself

and pay attention when you look
over large areas of space
then firstly you touch on the future tense often
with such a big view yes

and secondly, i.e. you regulate the future tense
into the positive level structure
and translate the universal level
even in time management
i.e. time control

and on the other hand
working on the structure of a large space
you can always build
this one is stock yes like a control center
according to your own scenario

and that's when you find it at the Macro level
what needs to be completed, you complete immediately
at the level of the universal management plan
by target event level
but already in a universal way

i.e. it is enough just
set a management goal at this level
and this will be a universal form

the goal itself
this is the universal form of control
universal impulse

once you get to that level
then you naturally
then you have tasks
can be implemented almost instantly

which is very important for example there
Well, in diagnostics there, for example, nuclear power plants
in some kind of difficult extreme situations , etc.

This is where I end today's seminar.

Thank you very much for your attention
